NAME
rrdlist − List directories and rrd databases.

SYNOPSIS
rrdtool list [−−daemon|−d address] [−−noflush|−F] [−−recursive|−r] path

DESCRIPTION
The list function provides an ’ls−like’ interface for traversing and listing the rrd database tree.

When using the −−daemon option, the list function connects to rrdcached, the RRD caching daemon, and issues a “list” command for the given path.

path The path (starting with ’/’) with ’/’ being the rrdcached base_dir.

−−daemon|−d address
Address of the rrdcached daemon. If not specified, the RRDCACHED_ADDRESS environment variable must be set (see below). For a list of accepted formats, see the −l option in the rrdcached manual.

rrdtool list −−daemon 127.0.0.1:42218 /cluster/nodes/node1

−−noflush|−F
When using a daemon, rrdtool list will usually flush its cache to the disk before performing operations. This option disables cache flushing.

−−recursive|−r
Make the list of rrd databases recursive.

ENVIRONMENT VARIABLES
The following environment variables may be used to change the behavior of rrdtool list:

RRDCACHED_ADDRESS
If this environment variable is set it will have the same effect as specifying the −−daemon option on the command line. If both are present, the command line argument takes precedence.
