About the Name

Why the name *Eudora*?

When looking for a name for this new Post Office Protocol mail program, we thought immediately of the title of the short story “Why I Live at the P.O.,” and named the program after the author of the story, Eudora Welty. “Why I Live at the P.O.” can be found in a collection entitled *A Curtain of Green and Other Stories* (Harcourt Brace & Co.). Ms. Welty’s stories are funny, sad, and fascinating; she’s surely one of the great American writers.

Introducing Eudora Email

Welcome to Eudora® Email 7.1! Eudora Email, hereafter referred to as Eudora, is a comprehensive electronic mail (email) software program that accesses your Internet Service Provider (ISP) or network to receive and send your email messages.

In Eudora, you can write messages and send them with custom stationery and signatures. You can send files, both text and graphic, created in other programs and "attach" them to your email messages. You can forward messages, redirect them, or reply to all recipients of a message.

You can set up mailboxes and folders for your mail and build "filters" to sort messages, alert you, and even send an automatic reply.

All your favorite addresses can be stored in your personal address book, or you can let Eudora search for addresses for you. And if you use more than one ISP, Eudora allows you to create "multiple personalities," to send and receive mail to multiple accounts.

Also, you can use Eudora in one of three modes: Sponsored, Paid, or Light. For more information on Eudora’s modes, see Operating Eudora in One of Three Modes on page 25.

There are many more Eudora features and functions described later in this manual.

System requirements

In order to install and use Eudora, you must have the following:

- IBM PC or compatible
- Microsoft Windows 98/ME/XP/2000. It is recommended that you have the latest service pack for each operating system.
- A mail account with an Internet Service Provider (ISP)
- Access to your mail account via a modem or Internet-style network connection.
What’s New in Eudora Email 7.1

The following new features and functions have been added to Eudora in version 7.1:

- **Recent mailboxes** - A virtual folder of recently used mailbox for conveniently getting to your most often used mailboxes
- **Expanded Media for Alert Sounds** - Play a Sound functionality on New Mail arrival and filters has been expanded from .wav files to allow for other media files such as .mp3
- **Saved Searches** - Save the search criteria of your Ultra Fast searches to use them again and again
- **Minimize to Windows System Tray** - Manage Eudora tasks from in icon in the system tray
- **Insert Downloadable Picture** - Include references to graphics stored on web servers

For details on other changes in Eudora 7.1, refer to the README and RELNOTE text files that reside in the directory where Eudora 7.1 is installed.

Where do I find information?

If you can’t find the information you are looking for in this user manual, it may be in the *Eudora Quick Start Guide*, or in the online help program in Eudora. This user manual is an online user manual; that is, it provides the basic procedures for using Eudora. The online help is primarily procedures and definitions.

The manual’s topics are linked. When you see a page number associated to a topic in the Table of Contents, the Index, or a cross-reference, just click the page number and the topic appears.

If you prefer, you can print the PDF manual. From the File menu in Acrobat Reader, choose Print.
Eudora Quick Start Guide

The *Eudora Quick Start Guide* is included as an electronic file in your Eudora directory. The *Quick Start Guide* shows you how to install Eudora and allows you to begin using the basic functions of Eudora immediately. The Guide provides only simple descriptions, so for more details, refer to this document.

Information provided in the *Eudora Quick Start Guide* is as follows:

- Finding Information
- System Requirements
- Getting Started
- Installing Eudora
- Opening and Configuring Eudora
- Importing Mail and Address Book from another Email Application
- Operating Eudora in One of Three Modes
- Choosing a Eudora Mode
- Registering Eudora
- Technical Support
- Creating and Sending a Message
- Checking for and Receiving Mail
- Replying to a Message
- Forwarding a Message
- Redirecting a Message
- Shortcuts

The functions listed above, except for *Getting Started* and the Eudora installation sections, are described more thoroughly in this manual.
Online Help

There are several ways to get online Help with Eudora.

- To find out what something on the screen does, use context-sensitive help.
- For instruction on how to perform certain tasks, use the help topics.
- To receive daily tips on assorted Eudora features each time you open Eudora, read the Tip of the Day.
Context Sensitive Help

You can perform context sensitive help by any of the following methods:

- Choose **Context Sensitive Help** from the **Help** menu. Then click the item in question. A brief description of the item appears. Click anywhere to close the description window.

- Click the **Help** button 📚. Then click the item in question. A brief description of the item appears. Click anywhere to close the description window.

- Press the F1 key. Select the option, command or field item in Eudora you want to know about, or use the Tab and arrow keys to move keyboard focus to that item. Then press F1. Keyboard focus is indicated by a dashed highlight box, a highlighted entry or item, or a flashing insertion cursor.

If the item is in a tabbed window, move the mouse arrow to a field and press F1. The entire procedure for the window appears.

Help Topics

For instructions on how to do certain tasks, choose **Topics** from the Help menu. The Help Contents are displayed, and you may either browse the contents or use the Find and Index options.

For more information, see **Help Menu** on page 289.

Tip of the Day

After you set up Eudora, the Eudora Tip of the Day dialog box appears each time you open Eudora showing you the Tip of the Day. You can display the following and previous tips by clicking the **Next Tip** and **Previous Tip** buttons. To prevent the Tip of the Day dialog box from being displayed on startup, uncheck the “Show Tips at Startup” check box. You can always display the Tip of the Day from the Help menu.

To close the Tip of the Day dialog box, click the **Close** button.
About Eudora

About Eudora displays the software version, registration information, and the credits for those who worked on or contributed to this version of Eudora.

Importing from Other Email Programs

You can import settings, address books, and mail from Netscape Messenger 4.x versions, Microsoft Outlook Express 4.0 and 5.x versions, Outlook 98, and Outlook 2000.

It may take a long time for the migration to occur depending on the amount of mail, the complexity of your settings, and the size of your address book that you are importing into Eudora. During the migration, if the process stops because of a corrupt message, you must go into your importing application and delete the corrupt message to resume the migration.

When the migration is occurring, notice in the Mailbox window that a mailbox tree begins to form. For example, you will see the folder “Outlook” and all its mailboxes listed underneath. A plus sign (+) next to the folder name indicates that other folders/mailboxes are contained within this folder. Your imported settings are immediate, and your mail is migrated.

To import from another program

1. From the File menu, choose Import.

The Import Mail and Addresses dialog box appears.
**Import Mail and Addresses dialog box**

**TIP:** In the dialog box previously shown, only the programs that appear in the text box are detected. Just select them, choose to import your mail and address book and click OK. However, if you don’t see the programs you want to import, click **Advanced** to display the Advanced Import dialog box where you can look for the files.

**Importing from Outlook Express**

**NOTE:** Before you begin the import, empty the *Deleted Items* folder in Outlook Express. Also, if the *Import Mail* and/or *Import Address Book Entries* option is dimmed, Eudora cannot find the messages and/or address book.

**To import from Outlook Express**

1. From the File menu, choose **Import**.

   *The Import Mail and Addresses dialog box appears.*

2. In the dialog box, choose **Outlook Express**.

   *If you don’t see Outlook Express, go to step 3.*

3. Choose Import Mail and/or Address Book then click **OK**.

   *Outlook Express should begin importing into Eudora.*

4. Click **Advanced**.
Introducing Eudora Email

The Advanced Import dialog box appears.

**Advanced Import dialog box (showing Outlook Express required fields)**

5. Choose **Outlook Express**.

6. In the *Please Locate your Folders.dbx or Folders.nch file*, click **Browse** and look for the Folders.dbx (for Outlook Express 4.x) or Folders.nch (for Outlook Express 5.x) file in your Outlook Express folder. Make sure the file appears in the text box.

7. In the *Please Locate your WAB file*, click **Browse** and look for your Windows Address Book. Make sure the file is visible in the text box. (The WAB file has the .wab extension. You can search for it using Windows Explorer.)

8. When finished, click **OK**.

Importing from Microsoft Outlook

**NOTE:** Before you begin the import, empty the *Deleted Items* folder in Microsoft Outlook.

In Microsoft Outlook, make sure it’s your default email program before you import it into Eudora. Once the migration is complete, close Eudora and restart. Only then can you make Eudora your Windows default email program.
To import from Microsoft Outlook

1. From the File menu, choose Import.

   The Import Mail and Addresses dialog box appears.

2. In the dialog box, choose Microsoft Outlook.

   If you don’t see Microsoft Outlook, go to step 3.

3. Choose Import Mail and/or Address Book then click OK.

   Microsoft Outlook should begin importing into Eudora.

4. Click Advanced.

   The Advanced Import dialog box appears.

5. Choose Microsoft Outlook.

6. In the Please Locate your PST file, click Browse and look for the .pst file. Make sure the file appears in the text box. (The PST file has the .pst extension. You can search for it using Windows Explorer.)

7. When finished, click OK.
Importing from Netscape Messenger

Before you import your Netscape Address Book, you must first save it in LDIF format. LDIF means LDAP Data Interchange Format. To save your address book in LDIF format, follow the instructions to import Netscape into Eudora.

To import Netscape

1. Launch Netscape Messenger.

2. From the Communicator menu, choose Address Book.

3. From the File menu in Netscape Messenger, choose Export.

   The Save dialog box appears.

4. Name the file while retaining the .ldif extension and save it on your computer.

5. In the dialog box, choose Netscape Navigator. If you don’t check Import Address Book from LDIF file, the Browser button is dimmed. Click OK.

6. If you don’t see Netscape Navigator in the dialog box, click Advanced.

   The Advanced Import dialog box appears.

Advanced Import dialog box (showing Netscape required fields)

7. In the Please Locate your Prefs.js file, click Browse to look for the Prefs.js file. Make sure the file appears in the text box. The Prefs.js file should be in your Netscape folder.
8. In the *Please Locate your LDIF file*, click **Browse** to locate the address book file you just saved.

9. When finished, click **OK**.

### Operating Eudora in One of Three Modes

You can *choose* one of three operating modes on how you wish to use Eudora. They are as follows:

- **Paid mode**—This mode provides the full-featured Eudora desktop email client without advertising, and limited person-to-person technical support.

- **Sponsored mode**—This mode provides the full-featured Eudora desktop email client at no charge, supported by sponsors' advertising. It includes all of the features that are in the Paid mode except for BossWatch, Fast Search, SpamWatch.

- **Light mode**—This is an upgrade to the freeware version formerly known as Eudora Light. It includes fewer features than the other modes and may include a sponsor image or logo.

**NOTE:** For more information about technical support options, see [Technical Support](http://www.eudora.com/techsupport/options/) on page 27 or on the Eudora Web site.

### Changing Eudora Modes

If you bought Eudora from a web site, Eudora installs in Paid mode. However, if you would like to change the operating mode, for example to Sponsored mode, you can do so right in the Eudora program.

**To change the Eudora operating mode after you install Eudora 7.0**

1. From the Help menu, choose **Payment & Registration**.

   *The Payment and Registration window appears.*
2. In the *Which Eudora is right for you?* section:

- To use Eudora in Sponsored mode, click **Sponsored Mode (free, with ads)**.  
  *Eudora displays the ad window.*

- To use Eudora in Paid mode, click **Paid Mode (costs money, no ads)**.  
  *Eudora displays the Eudora web site for you to purchase Eudora.*

- To use Eudora in Light mode, click **Light Mode (free, fewer features)**.  
  *Eudora changes to Light mode by shutting down certain features. The features that will be off are listed in the Light mode dialog box.*

3. In the *Keeping Current* section:

- To add or change your profile, click **Profile**.  
  *Eudora displays a web site where you can provide information about yourself to help in customizing which ads would be of interest to you.*

- To find the most current version of Eudora, click **Find the Latest Versions**.  
  *The Eudora web site displays where you can retrieve the latest version of Eudora and lets you know if there is a cost to upgrade.*
NOTE: You can tell which mode you are in because that button is grayed out. To find out more information about the modes, click Go to the Eudora web site for more information.

4. To exit the dialog box, click Close.

Registering Eudora

If you are using Eudora in Paid mode, you need to register to be eligible for technical support. Also, you need to be registered to upgrade to newer version of Eudora and stay in Paid mode. See subscription information at www.eudora.com/email/subscription_faq.html. If you don’t register and/or use Eudora in Sponsored or Light mode, you are not eligible for technical support.

NOTE: If you switch from one mode to another, you must register in that mode even though you registered in your previous mode. For example, if you are a Paid mode registered user, and you wish to get a refund and use Sponsored mode, you must reregister in Sponsored mode.

To register your copy of Eudora

1. From the Help menu, choose Payment & Registration.

   The Payment and Registration window appears.

2. In the Keeping Current section, click Register with Us.

   Eudora takes you to Eudora’s registration web page.

3. Enter your information, click Submit Registration.

   An email will be sent to you confirming your registration.

Technical Support

For information on Eudora’s basic functions, refer to the procedures provided in this guide and to your online help, which you can access from the Eudora Help menu.
Introducing Eudora Email

Many common issues can be solved by visiting the Eudora technical support web site www.eudora.com/techsupport/win. The technical support web site provides online answers to your technical questions about QUALCOMM’s Eudora software products. Go to the Technical Support web site to get valuable “how to” information and step-by-step interactive tutorials www.eudora.com/techsupport/tutorials. Also, you will be able to retrieve most current Eudora products and documentation. (Sponsored and Light mode users may use the Eudora web site technical support and tutorials.)

In addition, you can learn from other Eudora users by searching the archives or posting a question to the Eudora User Forums. The forums are a free online community of Eudora users helping one another.

If you still need help after reviewing all of the available materials: the User Manual, this Quick Start Guide, the README files, the Online Help, and the Technical Support Web Site, contact your ISP or email administrator, or the Eudora Technical Support group. Before you call technical support, you need to register your copy of Eudora in Paid mode. Be sure to register as soon as possible to avoid any delays in receiving technical support.

Person to person support by phone or email is available to Paid mode users who have a valid registration code. Eudora tech support reps are available Monday - Friday from 8 A.M. to 5 P.M. Pacific Time using the following phone number and email address:

Phone: (858) 658-1292 (Paid mode users only)

Email: eudora-support@qualcomm.com (Paid mode users only) When sending email, make sure to include your Paid Mode registration code in the Subject field or in the body of your message.

About security (Sponsored and Paid modes only)

Eudora supports Secure Sockets (SSL), a security protocol for transferring information. SSL allows you to authenticate the server that sends and receives your email messages. Also, SSL is used to encrypt mail transfers so no one can read your messages while they are being sent to or received from your mail server.

SSL uses a security certificate system, just as most web browsers, to authenticate and encrypt your messages. Valid certificates should be present for SSL to work properly. These certificates are included in SSL and are usually updated by your ISP, email administrator, or Eudora. Valid certificates come with Eudora, and more will be provided to you as needed.
For your dominant personality, Eudora supports SSL through the Checking Mail and Sending Mail options window.

For any other personality, Eudora supports SSL through the Account Settings dialogs accessed from the Personalities window. When you set up a new personality, Eudora will be able to detect if the POP, IMAP, or the SMTP server for that personality supports SSL depending on which SSL setting you choose.

For information about using SSL for your other personalities, see Using SSL for Your Personalities on page 131.

Using SSL for your Dominant Personality

To access SSL settings for your dominant personality

1. From the Tools menu, choose Options.
2. For SSL when receiving mail, scroll and choose Checking Mail.

   The Checking Mail options window appears.
3. For SSL when sending mail, scroll and choose Sending Mail.

   The Sending Mail options window appears.

Checking Mail options window
Introducing Eudora Email

Sending Mail options window

In the Secure Sockets when Receiving (or Sending) field, click the down arrow to display the drop-down menu.

Following is a description of each option on the SSL drop-down menu:

Never—Do not use SSL for server authentication and mail transfer security, even if SSL is available on the server.

If Available STARTTLS (default)—Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL, that is, if the server supports STARTTLS. If your server doesn't support STARTTLS, mail transfers will occur successfully, but they will not be secured with SSL.

Required, Alternate Port—Use SSL for server authentication and mail transfer security by having Eudora automatically use the older style alternate port method for starting SSL. If your server does not support SSL on the appropriate ports, mail transfers will fail.

Required STARTTLS—Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL. If your server does not support STARTTLS, mail transfers will fail.

NOTE: If you use SSL and cannot make a connection when receiving or sending mail, you may need to check with your ISP to update any invalid SSL certificates. However, to override any issues with SSL when retrieving or sending mail, choose Never from the drop-down menu to make a successful connection.
4. To display the most current information for an SSL connection between a server and Eudora since the last time you started Eudora, click **Last SSL info**. 

_The Eudora SSL Connection Information Manager window appears with SSL and certificate information._

**CAUTION:** If you display the SSL information windows, make certain you don’t change any of the field information unless you are familiar with SSL.

**NOTE:** If you get an error messages that states SSL Negotiation failed, click **Last SSL Info** and then click **Certificate Information Manager**. If you see a certificate with a skull image to left of it, that means the certificate is not trusted. To make it trusted, click **Add to Trusted**. This will add the non-trusted certificate to the trusted list.

**NOTE:** On the first SSL negotiation for an email account, Eudora will report if a certificate is not trusted. If the user agrees to trust the certificate, Eudora will add the certificate to the trusted list.

---

**Starting and Quitting Eudora**

**To start Eudora**

1. From the **Start** menu under **Programs**, choose **Eudora**

2. Choose **Eudora** again.

   _Eudora launches._

**To quit Eudora**

1. From the **File** menu, choose **Exit** or press Ctrl+Q.

   _Eudora closes._

If you have queued messages or timed messages due to be sent in the next 12 hours, you are given the option to send them. See the sections **Queueing a Message to Send Later** on page 67 and **Queueing a Message to Send at a Certain Time** on page 68.

The Trash mailbox is emptied if the **Empty Trash when exiting** option is selected in the Miscellaneous options. See **Miscellaneous** on page 356.
Creating Messages

Creating an Outgoing Message

An outgoing message is a message you send to someone else.

To create an outgoing message

- From the Message menu, choose **New Message** or click the New Message icon on the main toolbar: 📩

  *The composition window appears.*

Using the Composition Window

The composition window consists of the title bar, the toolbar, the message header, and an area for the message body.

**Headers and Composition Window**

Title Bar

When completed, the title bar provides information about the message, including the name of the addressee, the time and date the message was sent, and the message subject.
Text Toolbar

The text toolbar is a series of buttons and menus displayed just under the title bar. It allows you to control the priority of your message, override some of your default options for the current message, send or queue the message, and apply text styles.

You can select or turn off each feature for the current message by clicking a button on the toolbar. (A feature is selected when the button is depressed, and turned off when the button is raised.) You can set some of the defaults for the toolbar in the Sending Mail options. See Sending Mail on page 302.

The drop-down lists and buttons on the top row of the text toolbar are described.

**Priority drop-down list**
This lets you indicate that your message is of higher or lower priority than a normal message. For most messages, this is just an empty box (normal priority). For details, see Setting the Message Priority on page 42.

**Signature drop-down list**
This lets you automatically append one of your signatures to the end of a message. For details, see Using a Signature on page 105.

**Attachment type drop-down list**
This lets you select the encoding format for attachments. For details, see Attaching a File to a Message on page 49.

**Quoted-Printable Encoding**
If this button is on, quoted-printable encoding is used when sending messages that contain special characters or long lines of text. It is used for all plain-text attachments. We recommend that you always keep this feature selected.

**Text As Attachment**
If this button is on, plain text files are attached to messages, not incorporated into the message as part of the message body.
Creating Messages

Word Wrap
If this button is on, a carriage return is not required at the end of each line. When the message is sent, the text is automatically “wrapped,” meaning that carriage returns are inserted at the end of each line of text, with roughly 76 characters per line.

Tabs in Body
If this button is on, pressing the Tab key within the message body inserts a tab. If this button is off, pressing the Tab key within the message body returns the cursor to the To field of the message header.

Format Painter (Sponsored and Paid modes only)
If this button is on, clicking a word or phrase copies its text and paragraph formatting. Click elsewhere to transfer the formatting.

Return Receipt (Sponsored and Paid modes only)
If this button is on, the message to your recipients includes a Notify Sender button that, when clicked, creates a message notifying you that the original message was viewed. This function does not work in all cases. For details, see Requesting a Return Receipt (Sponsored and Paid modes only) on page 42.

Show Text Symbols
If this button is on, invisible text symbols such as carriage returns, tabs, and spaces appear in the message. You can see these symbols only in your composition window. They do not appear in the message you send.

S/MIME Signer
If this button is on, Eudora will use your S/MIME certificate to digitally sign your outgoing message.

**NOTE:** You must have an S/MIME certificate installed on your machine to use this feature.
The drop-down lists and buttons on the bottom row of the text toolbar are described below. Note that the text styles and attributes controlled by this row can also be accessed via text file windows and signature windows.

**S/MIME Encrypter**
If this button is on, Eudora will use the public S/MIME certificate(s) of your recipient(s) to digitally encrypt your outgoing message.

**NOTE:** You must have the S/MIME public certificates for your recipients installed on your machine to use this feature.

**MoodWatch™** (Sponsored and Paid modes only)
ic cube—There is no offensive language in the message.
1 chili—There may be a slight bit of offensive language in the message.
2 chilies—There may be offensive language in the message.
3 chills—There is offensive language in the message.

**Send or Queue**
This button lets you send a message immediately or put it in the queue to send later. If the “Immediate Send” option is selected in the Sending Mail options, the button is labeled Send. If the option is not checked, the button is labeled Queue. For details, see **Sending Mail** on page 302 and **Sending Messages and Checking Mail** on page 67.

The drop-down lists and buttons on the bottom row of the text toolbar are described below.

**Font drop-down list**
Make the selected text a specific font (typeface).

**Size**
Make the selected text a specific **Size**.

**Bold**
Make the selected text **bold**.

**Italics**
Make the selected text **italic**.
**Underline**
Make the selected text underlined.

**Strikeout**
Make the selected text strikeout. Use strikeout text to show the text has been changed (editing).

**Color (Sponsored and Paid modes only)**
Make the selected text a specific color. Note that “Automatic” is the default for text on your computer (usually black).

**NOTE:** When typing a message, your text color defaults to Automatic (typically black). However, you can change the color as you type or by selecting text. If you change the text color, this button will now retain and display that color. When you want to change colors, click this button and choose the color from the drop-down menu. Note that if you change the text color to Automatic, this button will not change color. You can also ignore the color change by pressing the Shift key while changing colors.

**Typewriter (Sponsored and Paid modes only)**
Make the selected text the fixed-width (typewriter-style) message font set in the Fonts options. See Fonts on page 313.

**Align Left (Sponsored and Paid modes only)**
Align the selected paragraph to the left margin.

**Align Center (Sponsored and Paid modes only)**
Align the selected paragraph to the center of the page.

**Align Right (Sponsored and Paid modes only)**
Align the selected paragraph to the right margin.

**Indent In (Sponsored and Paid modes only)**
Indent the selected paragraph indented once to the left.
**Indent Out** (Sponsored and Paid modes only)
Remove one left indent from the selected paragraph.

**Bulleted List** (Sponsored and Paid modes only)
Make the selected text a bulleted list.

**Make Hyperlink** (Sponsored and Paid modes only)
Make the selected text or graphic a clickable hyperlink to a Uniform Resource Location (URL), so that when the recipient clicks the item, he or she is immediately taken to the URL.

**Clear Formatting**
Remove all the formatting from the selected text or paragraph.

**Insert Object** (Sponsored and Paid modes only)
Insert a specified picture file or a horizontal line at the current cursor position in body text. For details, see [Inserting Objects in Message Text (Sponsored and Paid modes only)] on page 47.

**Last Emoticon** (Sponsored and Paid modes only)
This lets you add a graphic emoticon at the position of the insertion point in the message body. For details, see [Sending Emoticons] on page 50.

### Message Header

Outgoing mail headers consist of six fields: To:, From:, Subject:, Cc:, Bcc:, and Attached. Each field is described below. The To:, Subject:, Cc:, and Bcc: fields can be directly edited. To move the cursor from field to field, press the Tab key or click in the desired field with the mouse.

To resize the header region of the outgoing message composition window, drag the separator up or down. This change applies to the current message only.
Creating Messages

**To:**—The intended recipients’ email addresses or nicknames you have defined. Multiple addresses and nicknames must be separated by commas. See Using the Address Book on page 233. To select a name from a list, see Using Automatic Name Completion (Sponsored and Paid modes only) on page 39.

**From:**—The sender’s email address. This is usually your incoming email account plus your real name. You can use a return address other than your incoming mail account by entering the address in the Return address field of the Getting Started options. See Getting Started on page 293.

If you have Alternate personalities set up, you can select the appropriate personality in the From: field drop-down list. See Using Multiple Personalities (Sponsored and Paid modes only) on page 115.

**Subject:**—Some brief text indicating the contents of the message. This field can be left blank although it is considered a point of email etiquette to include a Subject with each message. By default, Eudora warns you when you send a message with no subject.

**Cc:**—The email addresses or nicknames of people to whom a copy of the message is to be sent. These recipients are displayed in the message header for all recipients to see. Multiple addresses must be separated by commas. This field can be left blank. Cc means “carbon copy.” To select a name from a list, see Using Automatic Name Completion (Sponsored and Paid modes only) on page 39.

**Bcc:**—The email addresses or nicknames of people to whom a blind copy of the message is to be sent. These recipients are not displayed in the message header, and the recipients in the To and Cc fields will not know that a copy went to these addresses. Use Bcc to send a copy of a message to someone without showing the other recipients. Multiple addresses must be separated by commas. This field can be left blank. Bcc means “blind carbon copy.” To select a name from a list, see Using Automatic Name Completion (Sponsored and Paid modes only) on page 39.

The Bcc field can also be used to put a copy of the message in one or more of your mailboxes. To do this, right-click in the body of the message to display the drop-down list. From the drop-down list, choose your mailbox from the Fcc menu (equivalent to the Transfer menu). The name of the mailbox is inserted into the Bcc field preceded by the expression “ƒ\.”

Repeat the procedure to Fcc to multiple mailboxes. Eudora automatically separates the entries with commas. When the message is sent, a copy is placed in each specified mailbox. Fcc means “folder carbon copy.”
Attached:—A list of documents being attached to and sent along with the message. See the section Attaching a File to a Message on page 49 for instructions on how to add attachments. To delete an attachment from an outgoing message, select it and press the backspace or delete key. This field can be left blank.

Message Body

After filling in the header fields, move the insertion point to the space below the message header. Type the body of the message here. For information about formatting your message text, see Formatting Text (Sponsored and Paid modes only) on page 43. Also see Text Toolbar on page 33.

You can insert pictures and horizontal lines into message text. For details, see Inserting Objects in Message Text (Sponsored and Paid modes only) on page 47.

Using Automatic Name Completion
(Sponsored and Paid modes only)

Similar to the “Finish Address Book Entry” command (see Finish Address Book Entry Command on page 249), Auto-Completion allows you to enter a portion of a name in the To:, Cc:, or Bcc: field, and Eudora automatically completes the name for you. Just start typing and Eudora will attempt to complete the name. If multiple past recipients match the text you’ve entered, a list of names from your history file and address book appear in a drop-down name list (provided both the history file and address book are selected in the new Auto-Completion option window explained later in this section). Select the correct name, and the name and email address appear in the field.

The history file consists of names and email addresses of people you have previously sent or forwarded messages to, or to whose messages you have replied within Eudora.

The address book consists of the nicknames you have entered for each person in your address book.
In the example below, you want to send Barb a message. Previously, you had to enter her nickname from your address book, or if she wasn’t in your address book, you had to enter her full email address. To use the auto-completion feature, just enter B in the To: field, and Eudora displays a drop-down name list of names beginning with “B” for you to choose from. (You can also press Esc to prevent the drop-down name list from appearing.) If you had typed BA, Eudora would have displayed a drop-down name list with all names beginning with “Ba.” Scroll through the name list and click or press Enter to select the correct name. The name is now entered into the header field.

**Name auto-completion in a new message**

![Image of Eudora email interface](image)

If you have only a “Barb” and a “Beth” as names in your address book or history file, Eudora completes the first alphabetical name. So when you type B, “Barb” would appear first on the list (if **Names should appear in alphabetical order** is selected in the Auto Completion options window explained later in this section).

- 📦 indicates that the name came from your address book. If the name is from your address book, only the nickname appears in the drop-down name list.

- 📜 indicates that the name came from your history file. If the name is from your history file, both the username and email address appear in the drop-down name list as you type.

To complete the name in the field, select the correct name from the drop-down list. If you want to add another name in the To: field, type a comma (,) after the first recipient’s name. Then you can begin to add another recipient’s name as shown in the example below.
Creating Messages

Second name auto-completion in the To: field

The example below shows auto-completion in the Cc: field.

Name auto-completion in the Cc: field

NOTE: If you don’t want Eudora to auto-complete your email address as you type it, you can just type one letter, and all email addresses that start with that letter from your address book and history list appear in a drop-down list for you to choose from. Just turn on the Don’t auto-complete, just list matches option in the Auto-completion window in Options under the Tools menu.

To turn the name auto-completion feature off, go to the Tools menu, choose Options, and then select Auto-completion. Turn off Address Book and History File and click OK.

To delete an auto-completion entry

- From the auto-complete drop-down list, choose the name you want to delete and press the Delete key.
Setting the Message Priority

You can assign a priority to incoming and outgoing messages. The priority identification is only for you and your recipients; it does not affect the way mail transport systems handle the messages.

There are five priority levels available, with 1 being the highest and 5 being the lowest. Each is represented by a small symbol in the Toolbar of a message window and the Priority column of a message summary. Priority 3 (normal) is used for messages that have no assigned priorities, and it is not displayed. The highest priority symbol, a double-caret, is red; the lowest priority symbol, an inverted double-caret, is blue.

New messages are created with a normal priority. To change the priority of the current message, use the Priority drop-down list.

Selecting a priority for a message

NOTE: To set up Eudora to default to the sender’s priority on your replies, turn on the “Copy original’s priority to reply” option in the Replying options. See Replying on page 309 for more information. You can always change the priority in the message window.

Requesting a Return Receipt
(Sponsored and Paid modes only)

You can request that your recipients notify you when they have seen your message. To do this, click \[\text{READ}\] in the message toolbar.
Creating Messages

When your recipients open the message and then close it, a dialog box appears asking them to create a notification message now, later, or never. If you sent yourself a copy of the message, you will see the request for notification. If a recipient chooses to create a notification message, it is sent to you and tells you when the recipient opened your message.

Request for notification

To respond to a request for notification:

- Click **Now** to queue the notification message in your Out mailbox. It will be sent the next time queued messages are sent.
- Click **Later** to close the message without sending a notification. Note that each time you open the message and then close it (or if you try to delete it), the notification request will appear until you click either **Now** or **Never**.
- Click **Never** to cancel the notification request without ever sending a request for notification message.
- Click **Cancel** to dismiss the request for notification request from the screen while the return receipt message is open. Note that if you close the message, the notification dialog box will appear again.

The Return Receipt options may or may not work as described, depending on your recipients’ email software.

Formatting Text
(Sponsored and Paid modes only)

You can use standard text-editing options to format the text of your outgoing messages, your text files, and your signatures. The formatting is delivered to your recipients using text-editing standards in common use today. In Eudora, styled and plain text formatting is delivered to your recipients using the Hypertext Markup Language (HTML) format. This enables you to compose and send messages styled with different fonts, colors, font sizes, etc. However, the formatting your recipients see depend on how well their email packages support this standard.
HTML is the text formatting standard used in the World Wide Web by Web browsers and newer email applications. As well as allowing you to use enriched text, HTML also lets you embed pictures and create bullet lists in the messages you send.

It’s important to remember that you cannot completely control what happens on your recipients’ computers. Depending on the type of computers they are using, their installed fonts, their options or preferences, etc., they could end up viewing something other than what you had intended. Also, the formatting changes you make are sent to your recipient, but your default text settings are not. Any text that you did not make changes to appears using your recipient’s default text settings, which may be different from yours.

**To select preferences for sending text in your messages**

1. From the Tools menu, choose **Options**.
2. Scroll through the category list and select **Styled Text**.
3. In the Styled Text options window, you can select whether you want Eudora to send your messages with both plain and styled text, with styled text only, or with plain text only. Also, you can set a warning each time you send a message with styled text. However, the default is to send both styled and plain text. For details, see **Styled Text** on page 322.

Text in outgoing messages, text files, and signature files can be formatted using the commands on the Edit menu, the Text submenu, and the formatting toolbar. See **Text Toolbar** on page 33 for information on using the formatting part of the toolbar. The following Text submenu commands are described.

**Text Editing Menu Commands**

To format text, use the commands on the Text submenu of the Edit menu. If text in the message body is selected, the menu command applies the formatting to that text. If no text is selected but the cursor is in the message body, then the font-related commands apply the formatting to the next text you type, and the margin-related commands apply the formatting to the current paragraph; that is, the paragraph containing the cursor.

You must place the cursor in the composition window to activate the options, otherwise the options are inactive (grayed out).
Creating Messages

The formatting options are:

**Font**—Make the text a certain font by choosing from the fonts available on your system. Remember that your recipient may not have the same fonts.

**Bold, Italic, Underline**—Make the text **bold**, *italic*, or *underlined*. The default is plain text.

**Color**—Make the text black or the selected color.

**Typewriter**—Set the text to the fixed-width (typewriter-style) message font selected in the Fonts Options.

**Size**—Make the text the selected size: Very Small, Small (the default), Medium, Large, Larger, Very Large, and Humongous. The increase or decrease is based on the next or previous standard point size.

Remember that you are viewing the text based on your default settings in the Fonts Options, but your recipient’s settings and fonts will be different. For example, if your recipient’s default font size is larger than yours and you send a message with text set to “Humongous,” your recipient will see text even more humongous than yours!

**Left, Right, Center**—Align the selected or current paragraph to the left, the right, or the center of the current indent.

**Margins: Indent In, Indent Out**—Indent the selected or current paragraph’s left margin in one level, or “outdent” the left margin: remove one level of indent. You must have text highlighted to activate this option.

**Bulleted List**—Convert the selected text to a bulleted list, or begin a bulleted list at the insertion point.

**Make Hyperlink**—Convert the selected piece of text, or the selected graphic, to a clickable, underlined hyperlink to a URL you specify; when your recipient clicks the hyperlink, he or she is immediately taken to the URL. You must select text or a graphic to activate this option.

**Clear Formatting**—Clear all formatting and go back to the default settings. This option is not active if you have no formatting in your message.
Creating Messages

Insert Object—Insert objects in the body of a composition message. Includes the commands “Picture” (insert an embedded graphic file), “Downloadable Picture” (inserts a link to a graphic on a web server), and “Horizontal Line” (insert a horizontal rule as a separator).

Other Formatting Options

If you select the Word Wrap button in the message toolbar, a carriage return is automatically inserted at the end of each line of text with roughly 76 characters per line when the message is sent. This makes the message legible on your recipient’s computer.

It is a good idea not to include your own carriage returns within paragraphs if you have the Word Wrap option selected. Use carriage returns only to create new paragraphs in the message.

To manually wrap text

1. Select and highlight the text you want to wrap.
2. From the Edit menu, choose Wrap Selection.
   • To unwrap text, select the text you want, then hold down the Shift key and from the Edit menu, choose Wrap Selection.
   • To copy wrapped text without taking the carriage returns, that is, to copy and unwrap, hold down the Shift key and choose Copy from the Edit menu.

Using Format Painter
(Sponsored and Paid modes only)

By using Format Painter, you can copy text and paragraph styles from one place to another.

To copy styles

1. Select or click in the text whose styles you want to copy.
2. Click the Format Painter button on the toolbar.

   The cursor changes to an I-beam with a paintbrush indicating that Format Painter is turned on.

3. By clicking the word or highlighting the text, the style is immediately applied when you release the mouse button.
Creating Messages

The style of the text, such as font, size, color, bold, italic, underlined, etc. as well as the paragraph styles, such as alignment, bullets, indenting, etc. are copied.

4. Click and Format Painter turns off.

Inserting Objects in Message Text
(Sponsored and Paid modes only)

To insert pictures and horizontal lines into the body of a message, use the Insert submenu under the Edit menu, or use the Insert Object button on the message toolbar. See Text Toolbar on page 33.

You can insert an object in the middle of a line of text or between lines of text in the message body.

To insert a picture in message text

1. Move the cursor to where you want the picture.
2. From the Edit menu, choose Insert.
3. From the Insert submenu, choose Picture.
   A dialog box appears.
4. In the dialog box, select an image file and click Open.

The picture is inserted into the message body at the cursor position. You can continue typing text. Once the picture is inserted in your message, you can drag it to where you want it in the message. Your recipient will see the picture right in the message body.

With QuickTime 4.0 or later installed on your computer, you can insert a variety of graphics files into your outgoing messages using the Insert Picture command. You can insert formats that are supported by QuickTime, for example, JPEG, GIF, BITMAP, TIFF, PNG, BMP, PICT, QTIF, SGI, TARGA, FPX, PHOTOSHOP and more.

NOTE: What your recipient sees may depend on whether the receiving computer and email package support the display of inline images embedded in message text.

To insert a downloadable picture in message text

1. Move the cursor to where you want the picture.
2. From the Edit menu, choose **Insert**.

3. From the Insert submenu, choose **Downloadable Picture**

   *The Insert Downloadable Picture dialog appears*

   **Insert Downloadable Picture dialog**

   ![Insert Downloadable Picture dialog](image)

   4. Enter the location of the downloadable picture into the URL of picture field.

   5. Optionally enter alternative text for the picture (displayed when the recipient cannot view the picture, or when the mouse is held over the image).

   6. Optionally enter a URL to launch when the image is clicked on.

   *The picture is displayed into the message body at the cursor position. You can continue typing text. Once the picture is inserted in your message, you can drag it to where you want it in the message. Your recipient will see the picture right in the message body.*

   **To insert a horizontal line in message text**

   1. Move the cursor to where you want the line.

   2. From the Edit menu, choose **Insert**.

   3. From the Insert submenu, choose **Horizontal Line**.

      *A horizontal rule is inserted immediately above the line on which the cursor resides.*
Creating Messages

Attaching a File to a Message

Any file can be attached to and sent with a Eudora message. Most of the time, an attached document functions like a “rider” to the email message, and does not appear within the message text. Instead, the name of the document appears automatically in the Attached field of the message header.

To attach a file to an outgoing message

1. From the Message menu, choose Attach File.

*The Attach File dialog box appears.*

*Attach File dialog box*

Locate the file you want, select it, and click Open to attach the document to the current message or to open a new message with the file attached. You can add as many attachments as you want to a message.

You can also drag one or more files from either the desktop or the File Browser window onto the message window to attach them. See File Browser Window on page 221.

To detach an attached document before the message is sent, select the document name in the Attached field; then press either the backspace key or the Delete key.

When the message is sent, if the chosen document is not a plain text (ASCII) file, it is encoded in the selected attachment type. This allows you to send any kind of document through the mail, even applications.
If the document is an ASCII file, you can put it in the body of the message by turning off the Text as Attachment button in the message toolbar, or by turning on the “Put text attachments in body of message” option in the Attachments options. See Attachments on page 311. The toolbar button applies to the current outgoing message; the Attachments option applies to all outgoing messages.

The attachment types include the following:

**MIME**—This is best for recipients with MIME-compliant email readers, regardless of what operating system they are using. For more information on MIME, see “MIME and Mapping in the extended online user manual.

**BinHex**—This is best for recipients on a Macintosh with an email reader that is not MIME-compliant.

**Uuencode**—This is best for recipients using PC or UNIX systems that are not MIME-compliant.

### Manually Decoding Attachments

If you send an attachment and your recipient’s email program does not automatically decode it, it will probably be included in the body of the message in the chosen attachment format (MIME, BinHex, or Uuencode).

If you receive a large message consisting largely of indecipherable text, it is probably an attachment that was not automatically decoded. Usually this is because the attachment headers are formatted incorrectly.

To decode an attachment that was not automatically decoded, open the message and choose Save As from the File menu to save the message as a text file. Then run the decoding utility appropriate for the encoding method that the sender used. Decoding utilities can be found at various shareware sites on the Internet.

### Sending Emoticons

Emoticons are characters used to indicate an emotion or expression. In internet communication, emoticons such as smiley faces can add an extra level of context to email messages.
Creating Messages

There are three ways to put emoticons in an outgoing email message. You can type the emoticon characters directly into your message, you can use the emoticon pull-down menu, or you can use the “Insert Emoticon” command under the Edit menu.

**To type an emoticon**

1. When composing a new email message, click your cursor in the body of the message.

2. Type the emoticon characters. Eudora will automatically replace the characters with a graphic emoticon.

  - (Sick )

*For example if you type the characters :-) in a new email message, Eudora will replace :-) with the happy face 😊 graphic icon.*

---

**To choose an emoticon from a pull-down menu**

1. When composing a new email, click your cursor in the body of the message.

2. From the formatting toolbar above your new message window, click the button.
Creating Messages

The emoticon submenu appears with the list of available emoticons.

3. From the list, click on an emoticon.

The emoticon appears in the outgoing email message.
To use the Insert Emoticon command

1. When composing a new message, go to the **Edit** menu.

   *The menu appears below the **Edit** menu.*

2. Choose **Insert Emoticon**.

   *A menu appears displaying the emoticons.*

3. From the list, click on an emoticon.

   *The selected emoticon will appear in the outgoing message.*

**NOTE:** Emoticon display is controlled by the program reading the email message. Emoticons are not sent as image files with your outgoing email, so if the recipient of your email message is not using Eudora 6.2, their emoticons may display differently.
Including a URL in a Message  
(Sponsored and Paid modes only)

To include a *hot link* also known as a Uniform Resource Locator or URL in a message, enclose it with *less than* and *greater than* signs (angle brackets) to ensure that your recipient’s email application can identify it as a URL, for example, `<http://www.eudora.com>` is a hot link.

### URL in a message

Creating a Hyperlink in a Message  
(Sponsored and Paid modes only)

Eudora lets you create a *hyperlink* in an outgoing message; that is, it converts a piece of text or a graphic into a link to a URL. When your recipients click the text or graphic, their browsers open and take them to that URL.

**To create a hyperlink**

1. Type the text you want to link in your outgoing message, for example “Click here.”
2. Select the text to highlight it.
   
   Or, insert a graphic file by choosing *Insert* then *Picture* from the Edit menu and select the inserted graphic.
3. Either choose *Make Hyperlink* from the Text submenu under the Edit menu, or click the *Make Hyperlink* button on the message toolbar. See *Text Toolbar* on page 33. In the *URL* field of the Hyperlink dialog box, enter the full address of the URL, for example `http://www.eudora.com`
4. Click *OK*. 

Creating Messages

The text or graphic is now linked and is highlighted and underlined in the message. When your recipients receive the message, open it, and click the text or picture you hyperlinked, their browsers or other applications will open and go directly to the URL you specified.

For example, if you hyperlinked “Click here” to the Eudora Web site www.eudora.com and when your recipient clicks “Click here,” your recipient’s browser opens and the Eudora Web page appears.

Checking Your Spelling Automatically
(Sponsored and Paid modes only)

Automatic spell check is the inline spell check feature of Eudora. If automatic spell check is turned on, misspelled words are double-underlined in the message body after you type them and press the spacebar. To correct the word or display a drop-down word list from which to choose the correct word, right-click the underlined word.

Before you start using the automatic spell check feature, you must turn on this feature.

To turn on the automatic spell check

1. From the Tools menu, choose Options.
2. Scroll and select Spell Checking.

The Spell Checking options window appears.
3. Select **Automatically as you type**.

4. Click **OK**.

*Your automatic spell check is on.*

When you type in your message and misspell a word, the word is immediately underlined after you press the spacebar as shown in the example.

**New message with automatic spell check**

![Image of email message with automatic spell check enabled]
To correct the misspelled word

1. If you want to choose the correct word from the drop-down word list, right-click and the drop-down word list appears as shown.

   Drop-down word list

   ![Drop-down word list image]

   2. From the drop-down word list, choose the correct word. Your misspelled word is replaced by the correct word.

   **NOTE:** Notice in our example that “p.m.” is double-underlined indicating that it’s misspelled according to the spell checker. From the drop-down word list, you can choose **Ignore All** to ignore the perceived error or **Add** to add the word to your dictionary. If you add the word, it will not display as a misspelled word in future messages.

Checking Your Spelling Manually
(Sponsored and Paid modes only)

If you prefer not to use the automatic spell check, Eudora has a manual spell checker. It can be used to check for misspellings in the Subject field and body of current message composition windows, text files, and signature files. It includes a built-in dictionary and also allows for the creation of a custom user dictionary. Additionally, it can be configured to ignore capitalized words, words in all capital letters, words with numbers, and mixed-case words; to report doubled (repeated) words; and to suggest alternative spellings.

Changes to the spelling options can be made in the Spell Checking options window. To open this window, from the Tools menu, choose **Options**. Scroll the category list and select **Spell Checking**. For details, see **Spell Checking (Sponsored and Paid modes only)** on page 324.
Creating Messages

For information on how to get dictionaries for languages other than U.S. English, see Spelling Dictionaries on page 427.

To automatically check spelling when you send or queue a message, turn on the “Check when message queued/sent” option in the Spell Checking options. If this is on, the message is checked for spelling errors when you send or queue it. If you complete the spell-checking process, the message is automatically sent or queued. If you click Cancel instead, or leave spelling errors in the message, a dialog box appears asking you if you still want to send or queue the message. If you don’t want that dialog box to be displayed, turn on the Don’t warn me anymore option in the Spell Checking options.

To check the spelling of a current composition window, text file, or signature file, click Check Spelling in the main window toolbar or choose Check Spelling from the Edit menu (Ctrl+6). If there are no misspellings, the “No misspellings found” alert appears.

For an alternate way to check your spelling, use the Shift+Check Spelling option on the Eudora main window toolbar, which lets you see all misspelled words at once and change only those you want to. See Saving a Message for Later Changes on page 65.

Also, if text is selected, Eudora checks the spelling only of the selected text. Otherwise, it starts the spelling check from the beginning of the message body or text file and checks the entire text.

If a misspelled, unknown, or repeated word is found, the Check Spelling dialog box appears with the word listed in the Unknown field. If you want to send (or queue) the message without correcting the misspelled word, click Just send.

The following dialog box appears only if the Warn me when sending/queueing message with misspellings option is turned on. See Spell Checking (Sponsored and Paid modes only) on page 324.
To correct the misspelled word

- Type the correct spelling of the word in the Change To field (if it is not already there) and click Change.
- Select the correct word from the Suggestions list and click Change.
- Double-click the correct word in the Suggestions list. The spelling checker then proceeds with the check.

Check Spelling Dialog Box

The Check Spelling dialog box allows you to ignore an unknown word, change it, suggest the correct spelling, add the word to your user dictionary, edit your dictionary, or change the spelling options via the Options button. Each of the fields and buttons is described.

**Just Send/Queue**—Click to send or queue the current message that contains the misspellings. The misspellings are not corrected before they are sent or queued.

**Unknown**—An unknown word is one that is not found in Eudora’s built-in dictionary or your own custom dictionary. You can act on an unknown word using the Ignore, Ignore all, Change, Change all, or Add buttons as described below.

**Change To**—This field works in conjunction with the Change and Change all buttons. It allows you to modify the unknown word by either typing its correct spelling in this field or selecting a suggested alternative spelling from the Suggestions field, and then clicking the Change or Change all button, as described below.

**Suggestions**—This field lists Eudora’s suggestions for the correct spelling of the unknown word. If the Suggest words option is selected, all suggestions are listed here by default. If the option is deselected, click the Suggest button to display Eudora’s suggestions.

**Ignore**—This button causes the spelling checker to ignore this occurrence of the unknown word.

**Ignore all**—This button causes the spelling checker to ignore this occurrence and all subsequent occurrences of the unknown word.

**Change**—This button substitutes the contents of the Change To field for the unknown word.

**Change all**—This button substitutes the contents of the Change To field for this occurrence and all subsequent occurrences of the unknown word.
**Suggest**—This button causes the Suggestions field to display a list of Eudora’s suggestions for the correct spelling of the unknown word.

**Add**—This button adds the unknown word to your custom user dictionary.

**Edit Dictionary**—This button displays the Edit User Dictionary dialog box.

---

**Edit User Dictionary**

The Edit User Dictionary dialog box lists all of the words in your user dictionary in the Dictionary field. It also allows you to add words to or delete words from your personal user dictionary, or even to clear the entire dictionary.

**NOTE:** Words in the user dictionary are saved in all lower case.

To add a word to the dictionary using this dialog box, type the correct spelling of the word in the Word field and click **Add**. The word is then added to the dictionary and displayed in the Dictionary field.

**NOTE:** The Add button in this dialog box works the same as the Add button in the Check Spelling dialog box.

To remove a word from the user dictionary, first type it in the Word field or locate it in the Dictionary field and single-click it to display it in the Word field. Then click **Delete**.

To delete the entire user dictionary, click **Clear**. You will then be prompted to confirm the deletions. If you click **Yes**, all of the words will be deleted from the user dictionary.
The Spelling Options dialog box lists the spell-checking options. A check mark in the box next to the option name indicates that the option is selected.

The spelling options can also be modified in Options under the Tools menu. For details, see Spell Checking (Sponsored and Paid modes only) on page 324.

The options are:

**Ignore capitalized words**—The spelling checker ignores words that start with a capital letter, such as proper nouns.

**Ignore words with all capitals**—The spelling checker ignores words that contain all capital letters, such as acronyms.

**Ignore words with numbers**—The spelling checker ignores words that contain numbers.

**Ignore words with mixed case**—The spelling checker ignores words that contain a mixture of uppercase and lowercase characters.

**Report doubled words**—The spelling checker reports words that appear twice in sequence in text and identifies them as Doubled words.

**Suggest Words**—The spelling checker displays Eudora’s suggestions for the correct spelling of an unknown word. You can select any combination of the suggestion options: Phonetic words, Split words, Typographic words.
Using BossWatch

Have you ever used Reply-All and wished you hadn’t? The new BossWatch feature will alert you to the presence of email addresses that you have designated, giving you an extra chance to think twice before you click Send.

Using BossWatch for Outgoing Messages

When you compose a new message, or reply to a message you received, BossWatch will alert you if any of the recipients match the criteria specified by your BossWatch settings.

Eudora can alert you when you are about to send a message to email addresses on your BossWatch list by underlining the addresses, outlining the Send/Queue button with a custom color, displaying a dialog, speaking the address or any combination of these options. See BossWatch (Paid mode only) on page 365
Using MoodWatch (Sponsored and Paid Modes only)

MoodWatch is a Eudora feature that monitors incoming and outgoing messages for offensive text. A new options window has been added for MoodWatch so you can determine how you wish to use MoodWatch.

MoodWatch works similarly to a spell checker. MoodWatch scans and determines what words or phrases in a message or a header may be offensive. One, two, or three red chili peppers appear to indicate the severity of the offensive text. If you are sending or queueing a message, a warning appears letting you know that text in your message may be offensive to your recipient.

Less offensive text in the message is underlined with a green squiggly line. More offensive text in the message is underlined with both a green and red squiggly line.

Using MoodWatch for Outgoing Messages

When you open a new composition window to begin writing a new message, MoodWatch scans each word and phrase you type and determines if it might be offensive to your recipient. The level of offensiveness is indicated by the appearance of one, two, or three red chili peppers, with three red chilies being the most offensive and one the least. As you write, chili peppers appear next to the Send or Queue button.

- There is no offensive language in the message.
- There may be a slight bit of offensive language in the message.
- There may be offensive language in the message.
- There is offensive language in the message.

After you click Send or Queue, a warning appears indicating there is offensive text in your email message. Following is the warning you would get if three chili peppers are displayed.
Creating Messages

**Three chili warning dialog box**

To send the message despite the offensive text, click **Send Anyway**. Your message is sent. If you have Eudora set to Queue messages for later transmission, you can still retrieve the message in the Out mailbox to edit or delete it. You can then send the message or requeue it.

To return to the composition window without sending or queueing the message, click **Cancel**.

**Using MoodWatch for Incoming Messages**

By changing the options in the MoodWatch options window, you can have MoodWatch scan your incoming messages for offensive text as well. The indicators are one, two, or three chili peppers appearing in the mailbox message summary column, as shown.

**MoodWatch scanning incoming mail**

Also, by turning on an option in the MoodWatch settings, you can have MoodWatch scan and display chili peppers on all of your stored mail. See the section, **MoodWatch (Sponsored and Paid modes only)** on page 351 for more information.
Creating Messages

Saving a Message for Later Changes

Sometimes it is convenient to save an outgoing message either as a safeguard when typing long messages, or so you can return to it later to make changes.

To save the current message

1. From the File menu, choose **Save**.

   Saved messages are put in the Out mailbox, and if at least one recipient is entered in either the To: or the Bcc: field, the saved message is shown with a bullet (●) in the Status column. If both the To: and Bcc: fields are empty, the Status column is blank. The bullet indicates that the message not only has been saved, but is also ready to be sent or queued.

![Saved (and sendable) message in the Out mailbox](image)

You can continue making changes to the message or close it. If you try to close an outgoing message window without saving that version of the message, an alert appears asking if the message should be saved or the changes discarded. If you select Discard and the message has never been saved, the message is deleted.
Sending Messages and Checking Mail

Sending or Queueing a Message

After you compose a message, you can send it immediately or put it in a queue to be sent later.

**NOTE:** Most outgoing (SMTP) servers do not require a password to send mail. For information about setting up a password check for sending mail, see Troubleshooting on page 479.

Sending a Message Immediately

If you want to send your messages immediately instead of putting them in a queue to send later, be sure the “Immediate send” option is turned on in the Sending Mail options window. For information on the Sending Mail options window, see Sending Mail on page 302.

To send the current message

- From the Message menu, choose **Send Immediately**, or click .

A Task Status window can appear to show the progress of the transmission. See Task Status Window on page 225.

If you have the “Immediate send” option on, but want to put the current message in the queue, hold down the Shift key and click the Send button. The Change Queueing dialog box appears, and you can set detailed instructions. For more details, see Queueing a Message to Send at a Certain Time on page 68.

Queueing a Message to Send Later

If you want to put your messages in a queue (in the Out mailbox) to send all together at a later time, be sure the “Immediate send” option is off in the Sending Mail options. For information on the Sending Mail options window, see Sending Mail on page 302.
You can set up Eudora to warn you if you try to delete a queued message, or try to quit Eudora with queued messages. To do this, turn on those options in the Extra Warnings options window. See Extra Warnings on page 341.

To put the current message in the queue

- From the Message menu, choose **Queue For Delivery** or click **Queue**.

The message window is closed, the message is saved in the Out mailbox marked **Q** (meaning it’s ready to be sent), and the date and time are placed in the Date column.

**Queued messages in the Out mailbox**

![Image of the Out mailbox showing queued messages]

To send all of your queued messages

- From the File menu, select **Send Queued Messages**.

If you have the Task Status window displayed, you can see the progress of the transmission. See Task Status Window on page 225.

If you have the “Immediate send” option turned on, but want to send a message immediately, hold down the Shift key and click the Queue button. The Change Queueing dialog box appears, and you can select “Send Message Right Now.” However, if you select this option, all messages that are queued in the Out box will be sent.

Queueing a Message to Send at a Certain Time

You can specify that a message be sent at a certain time in the future.

**To queue an outgoing message to send a certain time**

1. From the Message menu, choose **Change**.
2. From the Change submenu, choose **Queueing**.
The Change Queueing dialog box appears.

3. Change Queueing dialog box

4. If you choose **Right now**, the message is sent immediately when you click **OK**.

   If you choose **Next time queued messages are sent**, the message is sent the next time queued messages are sent.

   If you choose **On or after**, you can use the **Time** and **Date** fields to fill in the time and date at which the message should be sent. The message is saved in the Out mailbox with a clock icon 🕒 in the Status column, and with the specified date and time in the Date column. The message is sent when the specified time arrives.

   **NOTE:** For the message to be sent at the correct time, Eudora must be running at that time. If Eudora is not running, the message is sent the first time Eudora is run after the specified time has passed.

   If you choose **Don’t send** for a message that has never been queued, nothing happens. The message is held in the Out mailbox until it is either deleted or re-queued and sent.

   **NOTE:** When exiting Eudora with queued messages or timed queued messages (sent within the next 10 hours), Eudora gives you a warning and a chance to send these messages.

Editing a Queued Message

**To edit a queued message**

1. Open the **Out** mailbox.

2. Click to select the message summary.

3. Make the necessary edits and save it.
Sending Messages and Checking Mail

The message is kept in the Out mailbox.

If you close the changed message without saving it, an alert appears asking you to verify the changes.

Taking a Message Out of the Queue

To unqueue a queued message

1. Open the Out mailbox and select the desired message summary.

2. From the Message menu, choose Change Queueing and click Don't send.

   This changes the message status from queued (Q) to sendable (●). The message is held in the Out mailbox until it is either deleted, re-queued, or sent.

Sending Queued Messages When Checking Mail

If the Send on check option in the Sending Mail options window is on, every time Eudora checks for mail (automatically or manually), all queued messages are automatically sent. See Sending Mail on page 302.

Sending Messages with Special Server Instructions

To send your queued messages with special instructions for the incoming server

1. Hold down the Shift key and from the File menu, choose Send Queued Messages.

   The Mail Transfer options dialog box appears.

Mail Transfer Options dialog box

![Mail Transfer Options dialog box](image)

- [OK] [Cancel]
2. Set the options you want and click **OK**.

_All the actions you have requested are completed._

---

**Sending Mail Through One Account (SMTP Relay)**

The Internet Service Provider (ISP) with whom you have your primary email account may not allow you to send messages through any other Simple Mail Transfer Protocol (SMTP) server but their own. If you have accounts at other ISPs or third-party email services, you may not be able to send mail from those accounts unless you use your primary ISP's SMTP servers. The SMTP relay feature allows you to send all your mail through your primary ISP's server.

**To use SMTP relay**

1. From the Tools menu, choose **Options**.
2. Scroll and click **Sending Mail**.

_The Sending Mail dialog appears._

**Sending Mail options window**

3. In the **SMTP Relay Personality** field, choose the personality previously set up for the SMTP relay from the drop-down menu. **None** is the default.
4. Click **OK**.
Sending Messages and Checking Mail

All messages sent from each of your personalities will use the account information for the selected personality.

For example, if you bring your computer to a friend’s house or your office, you can easily change your SMTP relay to a personality that uses a different ISP to send mail. Or, you can set the relay personality to None so that you can send all mail directly to the servers for each personality.

Using SMTP Authentication

SMTP authentication operates automatically in Eudora.

Eudora can log in to an SMTP server when sending mail, just like it does for receiving mail. Not all SMTP servers require or allow such authentication. Eudora will attempt authentication to servers that allow it. The preferred SMTP authentication method is CRAM-MD5. If CRAM-MD5 is not available, LOGIN or PLAIN will automatically be used. Once Eudora discovers that your SMTP server allows authentication and when you send messages, a dialog appears that prompts you to enter a password.

To not allow logging into your SMTP server

1. From the Tools menu, choose Options, then Sending Mail.

   The Sending Mail options window appears.

2. Turn off Allow Authentication.

3. Click OK.

   NOTE: If you turn off the Allow Authentication option, you may not be able to send mail. Please check with your email administrator or ISP if you have any difficulties.

Keeping Copies of Outgoing Messages

To keep copies of your outgoing messages

- To put a copy of the current outgoing message in the Out mailbox, select Keep Copy button in the Composing Mail options dialog box. See Composing Mail on page 305.

- To put a copy of the current outgoing message in a particular mailbox, right-click in the body of the message and select the mailbox from the Fcc submenu.
In all these cases, when the messages are sent, they are put in the specified mailbox with a checkmark (✔) in the Status column, indicating that the message has been sent.

If none of these options are used, outgoing messages are put into the Trash mailbox after they have been sent.

**NOTE:** You can also set up a filter to save outgoing messages in particular mailboxes based on information contained in the message. See on Filtering Messages on page 161 for more information.

### Checking for Incoming Mail

The incoming mail server is where your mail is received and stored until it is transferred by Eudora to your PC. You can use several different mail accounts with Eudora. Your main account, or “dominant personality,” is specified in the Getting Started options. Additional mail accounts, or “multiple personalities,” are set up in the Personalities window and the Account Settings dialog box. For more information on personalities and the Account Settings dialog box, see Using Multiple Personalities (Sponsored and Paid modes only) on page 115 and Account Settings Dialog on page 125.

**NOTE:** To better understand how the incoming mail server functions with Eudora, see Mail Transport on page 410.

There are two ways to check your incoming mail server and transfer mail to your PC: automatically or manually. These are described in the sections below.

You can also control how your mail is transferred from the server, and what happens to it on the server. For details, see Managing Your Mail on the POP Server on page 86 and Managing Your Mail on the IMAP Server on page 91.

### Checking for Mail Automatically

To set up Eudora to automatically check your incoming mail account and transfer new mail

1. From the Tools menu, choose **Options**.
2. Scroll through the category list and choose **Checking Mail**.
Sending Messages and Checking Mail

The Checking Mail option window appears.

For more information, see Checking Mail on page 295.

3. In the Check for mail every _ minutes field, enter the number of minutes that you want between mail checks.

**NOTE:** Fifteen minutes is a good minimum interval because checking mail more frequently puts an unnecessary load on your incoming mail server. If the field is empty or is set to 0, mail is not automatically checked.

If automatic checking is set, the Check Mail command under the File menu shows you the next scheduled time for an automatic check.

4. From the Tools menu, choose Personalities.

The Personalities window opens.

See Personalities Window on page 115 for more information.

5. For each personality you want automatically checked, right-click the personality to display the drop-down context menu.

6. From the context menu, choose Properties.

The Account Settings dialog box appears.

7. Turn on the Check Mail option for that personality.

The Check Mail option also specifies that an account should be checked for new mail when a manual mail check is done.

Checking for Mail Manually

To manually check for new mail at any time:

- From the File menu, choose Check Mail or click .

Any account that has the Check Mail option turned on in the Account Settings dialog box is checked. If you haven’t successfully entered your password since opening the Eudora program, a prompt appears for each personality being checked. A Task Status window can also appear indicating retrieval of your incoming mail. See Task Status Window on page 225.
Stopping a Mail Check

To stop a mail check in the middle of the process:

1. On the Eudora status bar, right-click on the progress indicator or envelope.

   A drop-down context menu appears.

   **Task indicator’s context menu**
   
<table>
<thead>
<tr>
<th>Stop All Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Go offline</td>
</tr>
<tr>
<td>Show Task Status</td>
</tr>
</tbody>
</table>

2. From the drop-down list, choose **Stop All Tasks** to stop the mail check.

   To resume mail check, right-click on the progress indicator and choose **Process All Waiting Tasks**.

Using Your Password

Each time you open Eudora and check mail for the first time, you need to enter a password for each incoming mail account that you have. This password is required by the incoming mail server before it will transfer your mail, so that no one else can get your mail from the server.

**NOTE:** This does not protect your mail once it is on your computer. Unless a message has been sent with some type of security, it is just plain text, which many applications can read. If you are interested in securing the messages on your computer, you may want to consider a disk driver that can encrypt hard disk data.

If you need to enter a password, the Eudora Password dialog box appears. Enter your password and click OK. If you make a mistake before clicking OK, simply backspace and re-enter the password correctly.

**NOTE:** Your incoming mail account password is case-sensitive, so the uppercase and lowercase characters must be typed in exactly. Be sure that Caps Lock is off. If the Caps Lock key is on, the word “Caps” will appear on the bottom-right of the main Eudora window.
Password dialog box

If your password is rejected, an error message appears indicating you have entered the wrong password. Choose Check Mail from the File menu to redisplay the password dialog box.

As long as Eudora is running, it remembers all of your passwords. If you don’t want it to remember (for example, if you are away from your PC), choose Forget Password(s) from the Special menu. The next time you check mail for any account, Eudora prompts you for your password again.

**NOTE:** If you have more than one personality, a window appears listing the names of your personalities. You can select the personalities whose passwords you want Eudora to forget. All the personalities are selected by default. Deselect the personalities you don’t want Eudora to forget.

Forget Passwords window (multiple personalities only)

You can also make Eudora remember all of your passwords from one session to the next, which means you never have to enter passwords again, even if you quit and restart Eudora. You want to do this only if your PC is in a secure location, where there is no possible chance of someone else having access to it. To use this option, turn on Save password in the Checking Mail options. See Checking Mail on page 295.
Changing Your Password

To change the password for one of your personalities

1. From the Special menu, choose Change Password.

2. Select the personality whose password you want to change.

3. At the prompt, enter your old password once, and your new password twice. Depending on the server you are using, the password can be up to 30 characters, but normally it is only 7 or 8.

   **NOTE:** This works only if the incoming mail server is running a compatible password-change server. For information about these servers, see Sources on page 425.

When you choose a new password, try not to use real words, names, dates, familiar acronyms, etc. Some systems require at least one number or symbol in your password, and you may want to do that even if it is not required.
Receiving and Responding to Messages

Receiving New Mail

When Eudora does a mail check, you can be notified of new mail in one or all of the following ways: an alert dialog box, the opening of the mailboxes to which new mail is delivered, and a special “New Mail” sound. These options are turned on or off in the Getting Attention options. For information, see Getting Attention on page 334. Also, an envelope appears on the Windows taskbar indicating mail is waiting. See Background Tasks on page 336.

When you receive notice that new mail has arrived, select Eudora from the Windows task bar. Mail usually arrives in the In mailbox (unless you are using filters to transfer messages). If the In mailbox is not already open, select In from the Mailbox menu. The messages are listed in the order they are received, with the most recent message listed last. Unread messages are designated by a bullet (•) in the Status column of the message summary.

Double-click anywhere on a message summary to open the message. You can also view messages using the message preview pane at the bottom of the mailbox window while the message summary is highlighted.

Incoming messages are saved indefinitely in the In mailbox (or the mailbox into which they are filtered) until they are deleted or transferred to another mailbox.

Incoming Message Window

To open an incoming message, double-click on its message summary in a mailbox window, or if the message summary is current (highlighted), press the spacebar or the Enter key.
Receiving and Responding to Messages

Incoming message window

The incoming message window consists of the title bar, toolbar, and message body.

Title Bar

The title bar provides information about the message, including the name of the sender, the time and date the message was delivered, and the message subject.

Toolbar

The toolbar consists of buttons and menus displayed just under the title bar.

Move Message

This can be used to move any current message into a different mailbox. In an opened message, hold the mouse button down on the icon and drag it to an open mailbox or a mailbox in the Mailboxes window.

Fixed Width

Click this button to convert the message text to the fixed-width (typewriter-style) message font set in your Fonts options. This lets you view aligned text, such as columns and tables, more easily.

NOTE: You can also view the message in the message preview pane. See Working with Mailboxes on page 139 for more details.
Receiving and Responding to Messages

**BLAH BLAH BLAH**
If this is on, all the message headers appear.

**Pencil**
If this is on, you can edit the message.

**Delete From Server**
If this is on, the message will be deleted from the server the next time mail is checked (POP servers only). This icon appears only if you have the “Leave Mail on Server” option selected in the Incoming Mail options window. See Leaving Mail on the Server on page 86.

**Retrieve From Server (Fetch)**
If this is on, the message is retrieved (fetched) from the server the next time mail is checked (POP servers only). This icon appears only if you have the “Leave Mail on Server” option selected in the Incoming Mail options window. See Leaving Mail on the Server on page 86.

**Priority drop-down list**
This lets you indicate that the message is of higher or lower priority than a normal message. For most messages, this is just an empty box (normal priority). For details, see the section Setting the Message Priority on page 42.

**Subject:**
This is the subject that was assigned by the sender, and is shown in the message summary. For instructions on changing this subject, see Editing Incoming Messages on page 84.

**Message Body**
The message body contains the message header and text information, as well as the name and icon of each attachment. Attachments can be opened from within the message window by clicking on the attachment icon or name or you can drag and drop the attachment from the message to any folder.
Eudora lets you view incoming mail with advanced formatting, graphics, multimedia, and the like. Additionally, if you have the Use Microsoft’s viewer option turned on in the Viewing Mail options, and you have Microsoft Internet Explorer 3.0 or later installed and available on your system, then Eudora lets you take full advantage of the viewing capabilities of a Web browser. You can view directly in the email message itself, or linked to the Internet, without having to open your Web browser. See Viewing Mail on page 317.

You can also download web-based images that are embedded in your receiving messages when you check mail if you have Automatically download HTML graphics turn on in the Display options window. See Display on page 315.

Printing an Incoming Message

To print the current message

- From the File menu, choose Print.

  Eudora automatically prints headers and footers on each page, giving the window title, page number, and your return address.

Receiving Attachments

Unless you have specified a particular directory for your incoming attachments (see Specifying an Attachment Directory on page 83), they are automatically decoded and saved in the Attach Directory in your Eudora Directory. If you receive multiple attachments with the same name, a number is added to the end of each duplicate name, in the order they are received.

Attachment names appear at the bottom of incoming messages and the message preview pane.

To open an attachment from the open message window or the message preview pane, click on the attachment name or its icon. If you have the application that the attachment was created in, that application launches and the attachment opens.

You can now drag and drop attachments from your message to other directories. Use this feature to easily file the documents you receive.
If you open a received attachment outside of Eudora, for example directly from the Attachments directory or from a Eudora Sharing Protocol (ESP) directory, a warning alerts you to be careful when opening the attachment in case it’s a malicious file. You can turn the warning, *Launch a program externally*, on or off in the *Extra Warnings* options window found under Options in the Tools menu. See *Extra Warnings* on page 341.

If you receive a large message consisting largely of indecipherable text, it is probably an attachment that was not automatically decoded. Usually this occurs because the attachment headers are formatted incorrectly.

**To decode an attachment that was not automatically decoded**

1. Open the message.
2. From the File menu, choose **Save As** to save the message as a text file.
3. Run the decoding utility appropriate for the encoding method that the sender used. Decoding utilities can be found at various shareware sites on the Internet. Also see *Attaching a File to a Message* on page 49.

**Specifying an Attachment Directory**

**To not use the default Attach Directory to receive your attachments**

1. From the Tools men, choose **Options**.
2. Scroll through the category list and select **Attachments**.
3. Beneath the *Attachment directory* prompt, click on the large bar button.  
   *A standard file dialog box appears.*
4. Double-click on the name of the directory you want to use (its name appears above the list).
5. Click **Use Directory**.

*The dialog box closes, leaving the Attachments options window opened. The name of the folder you just selected appears in the “Attachment directory” bar button.*
NOTE: If at any time Eudora cannot find your selected directory, Eudora will use the Attach Directory in the Eudora Directory for attachments until you designate a new directory.

Editing Incoming Messages

You can edit the message body in an incoming message if you select the Pencil button in the toolbar. You can also edit the Subject in the Toolbar (this is the subject shown in the message summary), and you do not need to select the Pencil button to do this.

To edit an incoming message, click on the Pencil button to turn it on, then edit the message body. When you are done, save your changes and close the message. See Formatting Text (Sponsored and Paid modes only) on page 43 for details on how you can edit the message text.

To edit the subject of an incoming message, open it and edit the subject in the toolbar, not in the message body. When you are done, click elsewhere in the message, or close it. The new subject appears in the message summary. The contents of the Subject field of the message header remain unchanged.
NOTE: If you reply to the message, the original subject is used for the reply, not your changed subject.

Using Active URLs

(Sponsored and Paid modes only)

Any string of text that Eudora recognizes as a hot link or URL (Uniform Resource Locator: http, ftp, mailto, gopher, ph, finger, etc.) to the Internet is active. Click a URL to open a World Wide Web location, transfer a file, do a gopher search, use the finger tool, etc. URLs are highlighted and underlined to show that they are active.

ScamWatch (URL Protection)

Many email scams use misleading URLs to trick users to click on their links. What appears to be a legitimate web site address often hides a malicious URL link.

Eudora now features ScamWatch, which makes it very easy to quickly determine if the URL is legitimate before you click on it.

Using ScamWatch

To use ScamWatch, move your mouse over the URL link in any incoming email message.

If the URL is suspicious, Eudora will display a warning message in the help tag.

_Eudora displays a warning message and the true URL_
If you click on a suspicious URL, a new window will appear with another warning message.

Warning Message

![Warning Message]

Click **Cancel** and the suspicious URL will not be opened. Otherwise, click **Visit** to open the URL in your preferred web browser.

Managing Your Mail on the POP Server

During a mail check, your incoming messages are normally transferred from your account on the POP server to your computer, and then deleted from the POP server. But this can be awkward if you want to read mail from two or more computers and keep your mail organized at the same time.

There are several options you can use to control your mail transfers and the storage on the server. Some of these options are available in the Incoming Mail options, for your dominant account only, and the Account Settings dialog box, for any of your personalities. Some of the options are available in the Mail Transfer options. For more information, see on Checking for Mail with Special Server Instructions on page 89 and on Account Settings Dialog on page 125.

Leaving Mail on the Server

If you use the POP protocol for your incoming server to retrieve mail, your mail is normally deleted from the server once it is delivered to Eudora. However, most POP incoming servers allow you to indicate that you wish to keep your mail on the server so you can retrieve it from several different computers at various times.
Facts you should know if you decide to leave your mail on the server:

- Some mail servers won’t allow you to keep mail on them.
- Your system administrator may not allow you to keep mail on the server even though you have the option turned on. Usually administrators do not like to keep too much mail on the server because of space concerns.
- Keeping a lot of mail on the server may slow down the mail checking process.
- If you check mail from several computers at different times, you can end up reading your messages two or more times. However, if you delete mail from your Trash folder, the message is deleted on the server.

Eudora has an option that allows you to leave your email messages on the server for a specified number of days.

To transfer all of your new messages from the incoming server to Eudora and also leave copies of those messages on the server

1. From the Tools menu, choose Options.

2. Scroll through the categories and select Incoming Mail.

3. In the Incoming Mail options window, turn on the Leave mail on server option. This option is available only if you are using POP.

4. Select the Delete from server after _ days box and set the maximum number of days that copies of your email messages should be kept on the server. This number is determined by the time it takes for you to check mail from all of your computers. If this number is too small, copies of your mail will not be delivered to all of your computers.

   **CAUTION:** Make sure the settings in steps 3 and 4 are identical on all of the computers from which you will be receiving your mail. If you don’t, one computer will delete the mail from the server before you can receive it at another computer.

5. Click OK and close the window.

At the next mail check from that computer, Eudora ignores the copies of those previously read messages and looks for new ones. However, if you check mail from another computer, those messages are treated as new and are transferred to that computer. For more information, see Incoming Mail on page 298.
NOTE: The Leave mail on server option can also be set for each alternate personality you have. To do this, use the Account Settings dialog box, accessed from the Personalities window. See Account Settings Dialog on page 125.

CAUTION: The Leave mail on server option should be used with care, since it can result in a buildup of messages on the POP server.

Deleting a Message from the Server

To delete a message that has been left on the server (without retrieving it again), click the Trash button in the message toolbar or set the message summary’s server status to Delete, then check mail again. Or use the Delete all messages that have been retrieved option in the Mail Transfer Options dialog box as described in Checking for Mail with Special Server Instructions on page 89.

Skipping Messages Over a Certain Size

To stop Eudora from transferring incoming messages that are too large, select the “Skip messages over _ K in size” option in the Incoming Mail options window, and specify a size. Only the first few lines of the messages that exceed that size are transferred, with a note at the bottom stating that the whole message has not been transferred. See also Incoming Mail on page 298.

The Skip messages over _ K in size option can also be set for each personality you have. To do this, use the Account Settings dialog box, accessed from the Personalities window. See Account Settings Dialog on page 125

If you decide you want to transfer the whole message, click on the Fetch button in the incoming message window, or select the Fetch server status in the message summary, then check mail again. Also, you can use the Trash button or the “Fetch then Delete” server status so that the message is deleted from the server after it is transferred.

If you decide you don’t want the message and want to delete it from the server, click the Trash button in the incoming message window, or select the “Delete server status” in the message summary, then check mail again. The message will be deleted from the server without ever being retrieved.
Checking for Mail with Special Server Instructions

To check your mail and give special transfer and storage instructions to the POP server

1. Hold down the Shift key and from the File menu, choose **Check Mail**.

   The **Mail Transfer Options** dialog box appears.

*Mail Transfer Options* dialog box

[Image of Mail Transfer Options dialog box]

**NOTE:** If you only have one personality (dominant), only the left side of this dialog box appears.

2. Set the options you want and click OK to continue checking for mail.

The Mail Transfer Options fields are described.

- **Retrieve new mail**—Transfer your new mail from the POP server to your computer.

- **Send queued messages**—Send all the queued messages (marked **Q**) in your Out mailbox.

- **Delete messages marked for deletion**—Delete from the POP server the messages that are marked Delete in Eudora. This is for messages that were retrieved only in part, either with:

  - **Leave mail on server or Skip messages over _ K** in size options found in the Incoming Mail options window for your main account or the Account Settings dialog box for your multiple personalities.
  
  - Or the **Fetch all message headers to In mailbox** option found in the Mail Transfer options window.
Receiving and Responding to Messages

Retrieve messages marked for retrieval—Retrieve from the POP server the messages that are marked “Fetch” or “Fetch then Delete” in Eudora. This is for messages that were retrieved only in part with:

- *Skip messages over _ K in size* option found in the Incoming Mail options window for your main account or the Account Settings dialog box for your multiple personalities.
- Or with the *Fetch all message headers to In mailbox* option found in the Mail Transfer options window.

To mark a message “Fetch,” “Delete,” or “Fetch then Delete,” either click the buttons in the incoming message window, or select an option from the Server Status drop-down list of the message summary.

Delete all messages that have been retrieved—Delete all of the messages from the POP server that have already been fully transferred to the computer you are using. Messages that have been partially downloaded are not deleted from the server.

Delete all messages on server—Delete all of your messages from the POP server even the messages that have never been downloaded. *Be absolutely sure this is what you want to do, because there is no way to undo it!*

Fetch all message headers to In mailbox—Retrieve from the POP server the header and the first few lines of every new message. If you select this option, the messages are not filtered. Set the Server Status in the message summaries to specify what you want to do with the messages the next time you check mail.

**CAUTION:** If you delete the message header, and you have the “Delete from server when emptied from Trash” option on in either the Incoming Mail options window for your main account or the Account Settings dialog box for an alternate personality, the message is gone completely from Eudora and the POP server.

How should checking/sending be performed—If you have multiple personalities, you can check or send mail based on the options on the left of the Mail Transfer Options (turn on Using options at left), or as specified in the Incoming Mail options window for your dominant account. To set options for any of your personalities, access the Account Settings dialog box from the Personalities window. You can also specify the personalities that you want to check or send with this mail transfer. Hold down the Shift key to select multiple personalities in sequence, or the Ctrl key to select them out of sequence.
NOTE: Another way to check mail for multiple personalities, regardless of your settings elsewhere, is to open the Personalities window, select your desired personalities, right-click on the selection, and select Check Mail from the drop-down list. See Using Alternate Email Accounts on page 115.

Managing Your Mail on the IMAP Server

If your incoming mail server uses the Internet Message Access Protocol (IMAP), you manage your mail, mailboxes, and folders on the server, not on your computer. When you create mailboxes and folders, you create them on the server. However, you can see them in the Mailboxes window in Eudora. When you launch Eudora, you retrieve your mailboxes and folders from the server. When you check mail, the mail you retrieve is filtered on the server although your filters are created in Eudora. This is beneficial if you have to retrieve mail from different computers. Your mail remains on the server for you to retrieve at anytime on any computer.

During mail checks, partial messages or full messages are transferred to your computer, with or without attachments, depending on the options you specify in the Incoming Mail options window for your main account (see Incoming Mail on page 298). This is beneficial if you use a computer with limited disk space or a slow network connection. To specify options for your personalities, access the Account Settings dialog box from the Personalities window (see Account Settings Dialog on page 125).

When a message is transferred, either in part or in full, from the IMAP server to your computer during a mail check, a copy of the message remains on the server until you actively delete it.

Downloading Minimal Headers vs. the Full Message

By default, the “Minimal Headers Only” option is selected in the Incoming Mail options for an IMAP account. As a result, when you check mail for an IMAP account and the incoming mail is delivered to Eudora, only a minimal amount of information about each message is transferred to your computer. This consists of the information you would see in the message summary of a mailbox window: the sender, the date and time of the message, the subject, etc. When you open or preview the message, the full set of message headers and the entire message body is transferred to your computer. Whether or not any attachments to the message are also transferred depends on your setting for the “Full message except attachments over _ K” option.
Receiving and Responding to Messages

If you always want the full message to be transferred to your computer during mail checks, with or without attachments as specified separately, rather than just the minimal headers, then turn off the “Minimal Headers Only” option. See Incoming Mail on page 298 with IMAP selected.

Full Message Except Attachments Over _ K

To prevent Eudora from transferring large attachments to your computer during mail checks, turn on the “Full message except attachments over _ K” option and specify a size. You can set this option in the Incoming Mail options for your main account, or in the Account Settings dialog box for any of your personalities. If you enter zero, the attachment, regardless of its size, will be retrieved.

Each time mail is then checked for the account, any attachments larger than the specified size are not transferred to your computer with the message. The rest of the message is transferred including the complete message body. Any attachments within the specified size are also transferred. Enter a large number to transfer most or all attachments to your computer.

Attachments not transferred during mail checks can still be retrieved. When you open or preview the message associated with the attachment, an icon for the attachment appears in the incoming message window or the message preview pane.

To retrieve the attachment
- Click the icon to retrieve the attachment from the IMAP server. Or right-click on a message to display the drop-down list, and from the drop-down list, choose Fetch then Include Attachments.

If you wish to re-fetch a message at any time
1. Right-click on a message to display the drop-down list.
2. From the drop-down list, choose Fetch.
3. Either choose Include Attachments or Use Defaults. If you want to delete the local copy of a message, right-click on the message to display the drop-down list. From the drop-down list, choose Remove Cached Contents.

   The message still exists on the server if you want to re-retrieve it.

If the Full message except attachments over _ K option is turned off, only the attachment headers are transferred to your computer.
NOTE: In IMAP, your attachments download to the Attach folder, which is in the IMAP folder. However, if you have previously set up a directory in the Attachments options window to where you want your attachments to go, all attachments (POP and IMAP) go to that directory. See Attachments on page 311.

Deleting a Message from the Server

If you have the When I delete a message, move it to Trash option turned off in the Incoming Mail options window (see Incoming Mail on page 298), all new messages are delivered to your IMAP server and are kept there until you actively delete them.

Also, whenever you retrieve a message, either in part or in full from the IMAP server to your computer, a copy of the message is kept on the IMAP server until you actively delete it.

Therefore to delete an IMAP message, you must delete it from the IMAP server. To delete messages from the IMAP server, you must perform two steps.

- Mark the message for deletion.
- Remove all marked messages.

**To mark a message for deletion**

1. Open the IMAP mailbox or folder containing the message.
2. Select or open the message.
3. From the Message menu, choose **Delete**. Or press the Delete key.

To unmark a marked message so that it won’t be deleted from the IMAP server, select or open the message and from the Message menu, choose **UnDelete**. Or right-click to display the drop-down list, then choose **UnDelete**.

To remove all messages from the IMAP server marked for deletion, from the Message menu choose **Purge Messages**. The messages are completely removed both from the IMAP server and from your computer.

**WARNING:** Once you remove marked messages using the Purge Messages command, these messages are completely gone and *cannot* be restored. Therefore, use this command with caution.
Resynchronizing an IMAP Mailbox or Folder

Keeping your mailboxes and folders remotely on an IMAP server lets you perform operations on them from different computers. For a particular IMAP mailbox, you may delete some messages from the mailbox from one computer, check mail from another computer, resulting in new messages being transferred to the mailbox, and change the status of some of the messages from a third computer.

Each computer has no idea what has been done to the mailbox from the other computer until you resynchronize the mailbox, which updates all operations performed on the mailbox from all computers that have access to the mailbox. In some situations, others may have access to these same mailboxes.

To resynchronize an IMAP mailbox or folder

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window’s tab if it is the inactive window in a tabbed group.

   The Mailboxes window appears.

2. Right click an IMAP mailbox

   A drop-down menu appears.

3. From the drop-down list, choose Resynchronize Mailbox.

   TIP: When using the Resynchronize mailbox on every mailcheck, the icon of the mailbox changes to easily tell which mailboxes will resynchronize on every mailcheck.

   The mailbox Scarlett is set to Resync mailbox on every mailcheck. The other mailboxes have the normal icon because they must be resynchronized manually.

General mailbox and folder management for POP and IMAP servers is performed from the Mailboxes window. For more information, see on Using the Mailboxes Window on page 150.
Refreshing Your List of IMAP Mailboxes and Folders

If you have shared folders set up, you and other users can access and change messages stored in mailboxes and folders you keep stored remotely on an IMAP server. However, users may access shared folders only, your personal folders cannot be accessed. The Mailboxes window does not reflect the “real-time” status of the IMAP mailbox list. So between mail checks, a disparity can grow between what appears in the list and what is actually on the IMAP server, as new mailboxes are added and existing ones are changed or removed.

To refresh your list of mailboxes and folders on the IMAP server, as it appears in the Mailboxes window

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window’s tab if it is the inactive window in a tabbed group.
   *The Mailboxes window appears.*

2. Right-click on the top folder in the IMAP tree to display the drop-down list.

3. From the drop-down list, choose Refresh Mailbox List.
   *The mailbox list is updated according to what actually appears on the IMAP server at that time. Also, the Mailbox and Transfer menus are updated with the current IMAP mailbox configuration.*

Using IMAP Tasks Offline

If you use IMAP as your incoming server, you can perform certain tasks offline. Being offline is the preferred method when you are using a laptop away from home or office.

When you are offline, you are disconnected from the server.

To go offline

1. Move your mouse pointer to the taskbar and right-click.
   *A context drop-down list appears.*

2. From the context menu, choose Offline.
   *You are now disconnected from your IMAP server.*

When you are offline, you can perform these tasks:

- Disable timed mail checks
• Manually check for mail

• Transfer and delete messages after they are retrieved. However, a dialog box appears asking you to connect for as long as it takes to transfer and delete your messages. Once the tasks are completed, you immediately disconnect from the server.

**Replying to a Message**

*To reply to the current message*

• From the Message menu, choose **Reply** or click 💌.

A new message window appears, with the original sender’s address automatically placed in the To: field of the header. All of the sender’s original text is quoted in the message body. This text can be edited as needed. Additional text can be added to the reply just as to any outgoing message, and the reply can then be sent or saved for further changes.

If the sender’s text is quoted with a left sidebar, also called an “excerpt bar.” See the following example:

*Sender’s text showing excerpt bar*

```
| This text includes:
| and text that is:
```

Messages that have been replied to are identified with a left arrow 🔄 in the Status column of their message summary.

**Using the Reply Options**

There are several options that you can use when replying to messages.

*To include everyone who received the original message*

• From the Message menu, choose **Reply to All** or click 💌.

To include yourself as a recipient, select the “Include yourself” option in the Replying options. See **Replying** on page 309. This works only if you are using “Reply to All.”
Receiving and Responding to Messages

To determine who you are for the “Include yourself” option, Eudora uses the “me” nickname. If you do not have a “me” nickname set up in your Address Book, Eudora uses the contents of the Mail Server (Incoming), Login Name, and Return address fields from the Getting Started options. (Incoming mail accounts are usually of the form loginname@mailservername.) The “me” nickname is particularly useful if you have multiple addresses and don’t want replies to go to any of those addresses.

To put the addresses of the other recipients of the original message in the Cc: field (instead of the To field), select the “Put original To: recipients in Cc: field” option in the Replying options window. Only the original sender’s address is put in the To: field. This works only if you are using “Reply to All.” See Repling on page 309.

To copy the original message’s priority to your replies, select the “Copy original’s priority to reply” option in the Replying options window.

To change the keyboard shortcut Ctrl+R from its normal function of “Reply” to “Reply to All,” turn on the Map Ctrl+R to “Reply to All” option in the Replying options window. The change is reflected on the Message menu.

Reply with Selected Text

If you receive a message from someone, and you would like to reply to this message by using a selected part of the message, you can do so by just highlighting the text you want to appear in your reply.

**To select text to include in a reply**

1. In a received message, click and drag to highlight the text you want to include in your reply.

2. Once the selected text is highlighted, choose **Reply** from the Message menu or click 📧.

   The selected text now appears in your message reply.

3. Add more response, if needed.

4. To send, click **Send** (or **Queue**).
Forwarding a Message

Any message can be forwarded to someone else. You forward a message to someone who would consider the message as important as you do.

To forward the current message:

- From the Message menu, choose Forward or click ✉️.

A new message window appears with your address in the From: field, the original subject preceded by “Fwd” and a space in the Subject: field, the original sender’s text quoted in the message body, and any original attachments in the Attached: field. For details on how text is quoted, see the section Repeating a Message on page 96. Make any changes or add any comments you want, and enter the recipient’s address in the To: field. The message can then be sent or saved for further changes.

NOTE: If you forward an outgoing message (a message you sent), the attachments are not automatically included.

Messages that have been forwarded are identified with a right arrow ➔ in the Status column of their message summary.

Other ways to forward a message:

- With the desired message open or selected in a mailbox window, open the Personalities window, right-click on a personality, and choose Forward As from the Message submenu of the drop-down list.
- Set up a filter that uses the Forward To filter action. For more information, see Filtering Messages on page 161 and Filter Actions on page 170.

Redirecting a Message

Incoming messages can be sent to a new recipient “by way of” you, maintaining the original sender’s address in the From: field. You should redirect a message that should have gone to someone else.

To redirect the current message

- From the Message menu, choose Redirect or click ✉️.
Receiving and Responding to Messages

A new message window appears with the original sender’s address in the From: field with the statement “by way of” followed by your real name and/or return address, the original sender’s text in the message body, and the original attachments in the Attached: field. Make any changes you want, and enter the recipient’s address in the To: field. The message can then be sent or saved for further changes.

**NOTE:** You may want to enclose any changes in brackets [ ] so that you don’t confuse the recipient about who wrote what.

**Redirected message**

![Redirected message window](image)

Messages that have been redirected are identified with a diagonal arrow pointing up and right in the Status column of their message summary.

Other ways to redirect a message:

- With the desired message open or selected in a mailbox window, open the Personalities window, right-click on a personality, and choose **Redirect As** from the Message submenu of the drop-down list.

- Set up a filter that uses the Redirect To filter action. For more information, see **Filtering Messages** on page 161 and **Filter Actions** on page 170.

**Turbo Redirecting**

You can redirect a message to someone on your recipient list, queue the new message (without displaying it), and delete the original message, all with one command. To do this, choose the **Turbo redirect by default** option in the Miscellaneous options window. Then, when you select a recipient from the Redirect To submenu under the Message menu, a turbo redirect will be performed automatically. For more information, see **Miscellaneous** on page 356.
Redirect and Signatures

When you use Redirect or Redirect To, your signature is not added to the message when it is sent, unless you originally created the message. Eudora considers the message to be originally from you if the address in the From: field exactly matches either your return address or one of the addresses belonging to your nickname called “me,” if you have one. See Using a Signature on page 105.

Sending Rejected Messages Again

If for some reason an email message can’t be delivered to a recipient, mail transport agents return the message to the original sender (you). A message is typically rejected because of an error in the recipient’s address, although many other reasons are possible.

The return message usually includes cryptic information that may let you determine the reason the message was rejected. It also includes the text of the original message.

You can easily recover the original message, make any corrections, and resend it.

To recover, make corrections, and resend the current message

- From the Message menu, choose Send Again.

This eliminates the inserted extra text and reformats the message as it originally appeared. You can then make changes or additions and send the message again.

The Send Again command is useful for resending saved messages from your Out box, such as messages you’ve copied to yourself to save yourself retyping. You can send the same message to another recipient to avoid having to retype the whole message, or you can send a different message to the same recipients to avoid having to retype their addresses in the header.

To send again (alternate)

1. With the desired message open or selected in a mailbox window, from the Tools menu, choose Personalities, or select the Personalities tab if it is the deselected window in a tabbed group.

   The Personalities window appears.

2. Right-click on a personality. The drop-down context menu appears.
3. From the context menu, choose Message.

   *The Message submenu appears.*

4. From the Message submenu, choose Send Again As.

   *The message is sent again but from the selected personality, which may or may not be the same as the personality under which it was originally sent.*

**Using the Content Concentrator** *(Sponsored and Paid modes only)*

This feature allows you to concentrate text inside a single message by trimming redundant headers and text in the message window. You can also group threaded messages and view them with trimmed headers and text all at once in the preview pane of a mailbox. Threaded messages are messages you receive that were either sent, forwarded, or redirected to you about the same subject or from the same sender.

**To concentrate text inside a single message**

1. From the Tools menu, choose Options.
2. Scroll and choose Content Concentrator.

   *The Content Concentrator options window opens.*

3. In the Single Message Profiles, choose Compact or Terse for each field (preview pane and/or message window) from the drop-down menu. See Content Concentrator *(Sponsored and Paid modes only)* on page 363 for more information.

**Concentrated messages in a single message window (Compact setting)**

Hey gang-

Joe's 63rd birthday is coming up next weekend. I think we should have a surprise party for him. What do you guys think?

...snip...

What's the name of that place by the water that he's always going on about? Think we could get a table for 50 people?

A fancy restaurant? Do we like him THAT much? :) Just kidding. A restaurant would be cool.

No idea what the place on the water is called. Maybe Dawn would know?
Receiving and Responding to Messages

To group threaded messages and view them in the preview pane

1. In the selected mailbox, select and highlight the message you want to group.
2. Press the Alt key and click on the message.

**NOTE:** You can group messages in two ways, by sender or by subject. Click the sender's name or subject when pressing the Alt key. The messages are grouped by sender or by subject.

*All messages that are threaded to the selected message appear together.*

**Group threaded messages (by sender - Terse setting)**

**Content Concentrator** allows you to change the level of concentration right from the preview pane. Instead of setting the level of concentration in your Eudora Options, you can now change the level for each mailbox.

**Changing the concentration level in the preview pane**
To change the level for each mailbox

1. Click the Content Concentrator button directly above the Preview Pane in the middle of the mailbox, between the "Mailbox Size Display" and the horizontal scrollbar.

A contextual menu appears.

The Contextual Concentrator

2. Choose one of the options from the contextual menu. If a single message is highlighted, the default is Compact. If multiple messages are highlighted, the default is Terse.

3. Choose one of the following options:

   - **None** - This turns off Content Concentrator. There is no change in the message format.
   - **Compact** - Message is truncated; that is, excess headers and text are removed and replaced with ellipses and a snip indicator. Only the To:, From:, Subject:, and CC: headers appear in the message.
   - **Terse** - Message is truncated further; only the From: field of the header appears in the message and the concentrated body of the message.

For information on the Content Concentrator settings, see Content Concentrator in the Eudora Manual.
For more information, see Content Concentrator (Sponsored and Paid modes only) on page 363.
Using Signatures and Stationery

Using a Signature

A signature is a few lines of text that are automatically added to the end of an outgoing message when it is sent. A signature can be whatever you want, but it is mostly used to give contact information (telephone, address, etc.). You use only one signature at a time in a message, but you can create as many different signatures as you want. Also, you can choose to have your signature display or not display when writing an email. See Composing Mail on page 305.

NOTE: If you are using Eudora in Light mode, you are allowed only one signature.

Signatures are created and managed from the Signature window.

Signature Window

Use this window to manage and apply signatures.

To open the Signature window

- From the Tools menu, choose Signatures. Or, if the Signature window is in a visible tabbed window, click its tab.

Sample Signature window
The Signature window displays a single-column list of your signature files.

**NOTE:** You can select only one item at a time in the list; you cannot select multiple items.

If you right-click a signature in the list, a drop-down context menu appears with the following commands (the standard Eudora window-management commands appear at the bottom):

- **New**—Create a new signature. Eudora prompts you for the name of the new signature, then opens an editing window for you to type the signature text. Save the text with the File menu “Save” command, or close without saving to discard it.

- **Edit**—Open an editing window for the selected signature. (Double-click a signature as a shortcut for this command.) Save your changes with the File menu “Save” command, or close the window without saving to discard your changes.

- **Delete**—Delete the selected signature. Eudora asks you to confirm the deletion. Use the Delete key as a shortcut for this command.

- **Rename**—Rename the selected signature. Use the F2 key as a shortcut for this command, or click the signature item’s name box, then edit the name right in the box.

You can also display the drop-down context menu and create a new signature by right-clicking anywhere in an empty Signature window or by right-clicking anywhere off a signature item in a Signature window that is not empty.

### Adding a New Signature

Following is the basic procedure for creating a new signature in the Signature window, followed by additional information on managing signatures and sending them with messages.

Eudora comes with a default signature called Standard. This is an empty signature file that you fill with signature text. Instructions for editing signature files appear after the procedure below.

**To create a new signature**

1. From the Tools menu, choose **Signatures** or click the Signature window’s tab if it is the inactive window in a tabbed group.

2. Right-click anywhere inside the Signature window to select the drop-down context menu.

3. From the context menu, choose **New**.
Using Signatures and Stationery

_Eudora displays the Create New Signature dialog box, asking you for a name._

4. In the dialog box, enter a signature name and click **OK**.

_A signature window appears._

5. Enter your signature text in the signature window. You can format the text with styles; see _Formatting Text (Sponsored and Paid modes only)_ on page 43 and _Text Toolbar_ on page 33.

**Entering a new signature**

6. To save the signature, from the File menu, choose **Save**.

7. Close the Signature window.

**Modifying a Signature**

**To change a signature**

1. Right-click the signature in the Signature window to display the drop-down context menu.

2. From the context menu, choose **Edit**.

   _The signature window appears for that signature._

3. Make the changes.

4. To save the signature, from the File menu, choose **Save**.

5. Close the Signature window.
Deleting a Signature

To delete a signature

1. Select the desired item in the Signature window and press the Delete key. Or right-click the signature item and from the drop-down context menu, choose Delete.

2. When you are prompted to confirm the deletion, click Yes to delete it.

Using a Signature in a Message

To include a particular signature in an outgoing message, select the signature you want from the Signature drop-down on the message toolbar.

Selecting a signature for a message

To include a particular signature in all of your outgoing messages—unless you are using stationery, select a signature from the Signature drop-down list in the Composing Mail options window for your dominant account only, or in the Account Settings dialog box for any of your personalities. You can change this for a particular message by selecting a different signature or None from the Signature drop-down list on the message toolbar. For more information, see Composing Mail on page 305 and Account Settings Dialog on page 125.

You can indicate if a signature with styled text can be sent with a message that has no styled text. If not, the signature is included but the style is removed. See Styled Text on page 322.
To hide or show your signature while composing a message, go the Composing Mail options window and turn on or off the *Show signature while composing* option. See Composing Mail on page 305.

Also, you can include your default with all replies. Go the Replying option to turn the option on. See Replying on page 309.

Note that if you open a new message with stationery, or if you have default stationery set for all new messages, then the signature stored with that stationery file is the one used with the new message, overriding any default signature. However, you can always make the final decision about what signature to send with a new message by choosing it from the Signature drop-down on the message toolbar. For more information on stationery, see the next section, “Using Stationery.”

### Using Stationery
(Sponsored and Paid modes only)

Stationery files are templates for outgoing messages. If you find yourself repeatedly sending the same message, save the message as a stationery file and send it whenever you need to with the “New Message With” or “Reply With” commands. This way you don’t have to copy and paste text into a message; you can just open a pre-written message and edit it as necessary.

### Stationery Window

Stationery files are created and managed from the Stationery window. You can also open a new stationery message from the Stationery window.

**To open the Stationery window**

- From the Tools menu, choose Stationery. Or, if the Stationery window is in a visible tabbed window, click its tab.
Sample Stationery window

The Stationery window displays a single-column list of your stationery files.

NOTE: You can select only one item at a time in the list; you cannot select multiple items.

If you right-click a stationery item in the list, a drop-down context menu appears with the following commands.

• **New**—Create a new piece of stationery (a new stationery file). An untitled stationery window opens that you can fill out and choose “Save As Stationery” from the File menu.

• **Edit**—Open an editing window for the selected stationery item. Make your changes and choose “Save As Stationery” from the File menu, or close without saving to discard your changes.

• **Delete**—Delete the selected stationery item. Eudora asks you to confirm the deletion. Use the Delete key as a shortcut for this command.

• **Rename**—Rename the selected stationery file. Use the F2 key as a shortcut for this command, or click the stationery file’s name box, then edit the name right in the box.

• **New Message With**—Create a new message with the selected stationery. As a shortcut for this command, either select the stationery item and press Enter, or just double-click the stationery item.

• **Reply With**—Reply with the selected stationery to the sender(s) of the received messages that are currently selected.

• **Reply to All With**—Reply with the selected stationery to the sender(s) and all recipients of the received messages that are currently selected.
You can also display the drop-down context menu and create new stationery by right-clicking anywhere in an empty Stationery window or by right-clicking anywhere off a stationery item in a Stationery window that is not empty.

Creating New Stationery

Following is the basic procedure for creating a new stationery file in the Stationery window and additional information on creating and sending stationery messages.

To create a new stationery file

1. From the Tools menu, choose Stationery or click the Stationery window's tab if it is the inactive window in a tabbed group.

   The Stationery window appears.

2. Right-click anywhere inside the Stationery window to display the drop-down context menu.

3. From the context menu, choose New.

   Eudora opens a composition window to be used for stationery.

   NOTE: The Send/Queue button is inactive in the window; the message cannot be sent or queued.

4. Put the text you want into the message body, fill in the headers as appropriate (subject, copies, etc.) and make any desired setting in the toolbar.

5. From the File menu, choose Save As Stationery.

   The Save as Stationery dialog box appears.

6. Enter a file name and click Save to save the stationery file.

   The file is saved to your Stationery folder.

7. Close the stationery message.
Modifying Stationery

To change a stationery file
1. In the Stationery window, right-click the stationery item to select and display the drop-down context menu.
2. From the context menu, choose Edit.
3. Make your changes.
4. From the File menu, choose Save As Stationery to save.

Deleting Stationery

To delete a stationery file
1. Select the desired item in the Stationery window and press the Delete key; or right-click the stationery item and from the drop-down context menu, choose Delete.
2. When you are prompted to confirm the deletion, click Yes.

Using Stationery in a Message

To send a stationery message
1. From the Message menu, choose New Message With or Reply With.
2. From either the New Message With or Reply With submenus, select a stationery file.

A composition window appears containing the header and body from the stationery file. If you are replying to a message, the stationery information is added to the reply. You can edit and send this new message just as you would any other message.

You can also send a new stationery message by double-clicking on a stationery item in the Stationery window, or by selecting the stationery item and pressing Enter. In either case, a new composition window opens containing the selected stationery.
To use a particular stationery file for all of your outgoing messages, select a stationery from the Stationery drop-down in the Composing Mail options for your dominant account only, or in the Account Settings dialog box for any of your personalities. Most new messages use this file, unless you create the message using the “Redirect,” “Send Again,” “New Message With,” or “Reply With” command. For more information, see Composing Mail on page 305 and Account Settings Dialog on page 125.

You can also set up a filter to reply with a stationery message. See Filtering Messages on page 161 for more information.

Replying with Stationery
(Sponsored and Paid modes only)

To reply to a message with stationery

1. From the Message menu, choose **Reply With**.

2. From the Reply With submenu, select a stationery file.

   *The stationery file is opened as a message and is addressed as appropriate.*

You may also reply to message with stationery in the following ways:

With the desired message open or selected in a mailbox window:

- Open the Stationery window, right-click a stationery item, and from the drop-down list, choose **Reply With**.

With the desired message open or selected in a mailbox window:

- Open the Personalities window, right-click a personality, and choose **Reply As** from the Message submenu of the drop-down list. The default stationery assigned to that personality is used in the reply.

With the Personalities window open:

- Drag an open message by clicking or drag selected message summaries in a mailbox window, onto a personality in the Personalities window. A reply is initiated from that personality, and the stationery stored with that personality is used in the reply.
Set up a filter that uses the Reply with filter action. For more information, see Filtering Messages on page 161 and Filter Actions on page 170.
Using Alternate Email Accounts

You can set up alternate “personalities” in Eudora for each email account you have. For example, if you have work, home, and school email accounts, you can set up Eudora to send and receive email from each of these accounts, all without having to quit and restart Eudora. That is, you can check mail for all your accounts at once or for selected accounts at once, and you can do the same for sending mail.

To set up a personality, you use the Personalities window, New Account Wizard, and the Account Settings dialog box as described in this section. Your “dominant” personality, or principal email account, is set up when you install Eudora and can also be modified via the Account Settings dialog box.

Personalities Window

You use the Personalities window to manage, access, and apply your e-mail accounts — “personalities” — when you use more than one account.

To open the Personalities window

- From the Tools menu, choose Personalities. Or, if the Personalities window is in a visible tabbed window, click its tab.

Sample Personalities window
The Personalities window displays two columns of data:

- **Persona**—The identifying name assigned to the personality. <Dominant> indicates your principal email account, which is the account Eudora uses whenever you don’t specify otherwise and is the account associated with all mail stored before you began using alternate personalities.

- **Account**—The incoming mail account assigned to the personality. This is generally in the form loginname@incomingmailserver. See **Account Settings Dialog** on page 125.

To resize the column widths, position the pointer over the divider line between the column headings, until a splitter cursor appears. Then just drag the divider to left or right. Note that it is possible to completely collapse the Persona column.

**NOTE:** You cannot manually sort the information in the Personalities window. Clicking on a column heading does sort the column.

If you select one or more personalities in the Persona column and right-click the selection, a drop-down context menu appears with the following commands.

**TIP:** You can select multiple items in the Persona column to perform some of the operations listed below. Hold down the Shift key to select a consecutive range of items, and hold down the Ctrl key to make non-consecutive selections.

- **Check Mail**—Check mail now for all selected personalities.

- **Send Queued Messages**—Send messages queued by all selected personalities now.

- **Message**—This submenu lets you perform message-creation functions using only one selected personality. The submenu is unavailable if multiple personalities are selected in the Persona column.
  - **New Message As**—Create a new message as the selected personality. As a shortcut for this command, double-click a personality in the Persona column, or select the personality and press Enter.
  - **Reply As**—Reply as the selected personality to the sender(s) of the one or more received messages that are currently selected.
  - **Reply to All As**—Reply as the selected personality to the sender(s) and all recipients of the one or more received messages that are currently selected.
Using Multiple Personalities (Sponsored and Paid modes only)

- **Forward As**—Forward as the selected personality the one or more received messages that are currently selected.
- **Redirect As**—Redirect as the selected personality the one or more received messages that are currently selected.
- **Send Again As**—Resend as the selected personality the one or more received or composition messages that are currently selected.

- **New**—Create a new personality. See Adding a New Personality on page 117 for more information. When you select this command, Eudora walks you through the New Account Wizard, that is the name, return address, login name, and incoming email server. Change these settings as desired, and when you are complete, the new account is created. Once created, the personality will be checking mail.

- **Properties**—Modify the properties of the selected personality. You can modify only one personality at a time. When you select this command, the Account Settings dialog box displays, with its fields filled in with the information associated with that personality. See the description of this dialog box later in this chapter.

- **Delete**—Delete all selected personalities. Note, however, that you cannot delete the <Dominant> personality. You are prompted to confirm the deletion for each personality you have selected to delete. Note that these deletions are permanent and cannot be undone! When you delete a personality, any messages associated with that personality are reassigned to your Dominant personality. You can use the Delete key as a shortcut for this command (you will still get the confirmation requests).

You can also display the drop-down context menu and create a new personality by right-clicking in a blank area of the Personalities window, off all personality items, when none of the items are selected. When creating a new personality this way, you are walked through the New Account Wizard as in the description of the “New” command above.

If you drag one or more received messages to a personality item in the Personalities window, Eudora will “Reply As” that personality to the messages (hold down the Shift key to Reply to All As).

**Adding a New Personality**

Following are the basic procedures for setting up alternate accounts, followed by additional information on using personalities to send and receive mail. There are three types of new personalities you can add.
Using Multiple Personalities (Sponsored and Paid modes only)

- Brand-new personality—see “Creating a New Personality” below.
- Personality migrated from Netscape Messenger™, Microsoft® Outlook Express™, or Outlook 98™—see “Migrating to Create a New Alternate Account” on Importing Settings to Create a Personality on page 123.

Creating a New Personality

**To create a new personality (alternate email account)**

1. From the Tools menu, choose **Personalities**, or click the Personalities window’s tab if it is a deselected window in a tabbed group. The Personalities window appears.

2. Right-click anywhere inside the Personalities window to display the drop-down context menu.

3. From the context menu, choose **New**.

   *The first New Account Wizard window, Account Settings, appears.*

**New Account Wizard Account Settings window**

4. Select **Create a brand new email account** and click **Next**.

   *The next New Account Wizard window, Personality Name, appears.*
5. In the Personality Name text box, enter the name to identify this Personality only, for example “Business.” Click **Next**.

*The next New Account Wizard window, Personal Information, appears.*
6. In the Your Name text box, enter your name. Click **Next**.

   *The next New Account Wizard window, E-mail Address, appears.*

   **New Account Wizard E-mail Address window**

7. In the E-mail Address text box, enter your full email address and click **Next**.

   *The next New Account Wizard window, Login Name, appears. This is your return address.*
8. In the Login Name text box, enter your login name. This is the account name you use to gain access to your email from your Internet Service Provider (ISP). Click Next.

The next New Account Wizard window, Incoming Email Server, appears.

New Account Wizard Incoming Email Server window
9. In the Incoming Server text box, enter the name of your incoming server. Your ISP or system administrator should provide you with the name of this server for this account.

10. At the bottom of this window, select the type of incoming server you will be using, POP or IMAP. Click Next.

The next New Account Wizard window, Outgoing Email Server, appears.

New Account Wizard Outgoing Email Server window

11. In the Outgoing Server text box, enter the name of your outgoing server. If you do not want authentication when sending mail, uncheck the Allow authentication box. See Using SMTP Authentication on page 72. This server is sometimes the same as your Incoming server name. Click Next.

The Success window appears.

12. Click Finish.

You have successfully entered your new personality.

Your new personality will be checking mail whenever you retrieve mail.

To change any of your personalities settings, go the Account Settings Dialog on page 125.
Importing Settings to Create a Personality

To set up a newly migrated account from Netscape Messenger 4.x and later, Microsoft Outlook Express 5.0, Outlook 98, and Outlook 2000 as an alternate or multiple personality account using the New Account Wizard:

1. From the Tools menu, choose Personalities, or if the Personalities window is in a visible tabbed window, click its tab.

2. In the Personalities window, right-click to display the drop-down context menu. Choose New.

*The New Account Wizard window, Account Settings, appears.*

*New Account Wizard Account Settings window*

Several dialog boxes appear for you to choose Netscape or Microsoft's email applications for you to import from. For more information and procedures, see Importing from Other Email Programs on page 20.
Adding a Personality via the Account Settings Dialog

You can add a new personality without going through the New Account Wizard series of windows, but via the Account Settings dialog box. Instead of entering information per window, you enter all the information on two tabbed panels in one dialog box, the Account Settings dialog box.

To add a personality via the Accounts Settings dialog box

1. From the Tools menu, choose Personalities, or if the Personalities window is in a visible tabbed window, click its tab.

2. In the Personalities window, right-click to display the drop-down context menu. Choose New.

The New Account Wizard window, Account Settings, appears.

New Account Wizard Account Settings window

3. Select Skip directly to advanced account setup.

The Account Settings dialog box window appears, and you begin to enter information into the fields.

To continue, see the next section “Account Settings Dialog.”
Account Settings Dialog

This tabbed dialog box appears when you select “Skip directly to advanced account setup” from the New Account Wizard Account Settings window, or when you right-click on a personality in the Personalities window and choose Properties from the drop-down context menu. When you display the dialog box, enter the information in the fields. If you are modifying an existing personality, the fields are filled in with the information associated with the personality you have selected.

After you make your changes in the dialog box, click OK to save them, Cancel to discard them, or Help for more help.

**NOTE:** Any changes you make to your dominant personality in this dialog box are also changed where they are mirrored in relevant options of the Options dialog box. The same is true in reverse; changes you make in the Options dialog box are carried over here, when you next open this dialog box.

Generic Properties

This dialog box window contains the general characteristics associated with this personality.

**Sample Account Settings (Generic Properties panel)**

Following are option descriptions for the Generic Properties panel.
**Personal Name**—Enter a descriptive name to describe the personality (for example, Business or My PC Account). <Dominant> indicates your dominant personality.

Your dominant personality is your principal email account. All of your initial email settings are for your dominant personality. If you do not specify a personality, your dominant personality is used.

Note that the name shown here may be different from the Real Name associated with the personality (see below).

**Real Name**—Enter the real name of this personality—generally a first and last name. The text you enter here is included in the From: field of all your outgoing messages from this personality and identifies the source to your recipients. It appears before your return address in the message header.

**Email Address**—Enter the email address used in outgoing messages and recipients’ replies for this personality, if this address is different from the personality’s incoming mail account. The address you enter here is included in the From: field of all your outgoing messages from this personality, and when a recipient replies to a message from this personality, the reply is sent to this address. If you do not enter an address in this field, Eudora uses the personality’s incoming mail account as the email address. Incoming mail accounts are usually of the form `username@incomingmailserver`. For example, suppose your incoming mail account is `jcamp@pop.myfirm.com` but your email address is slightly different `jcamp@myfirm.com`. You would then enter `jcamp@myfirm.com` in this field.

If you do enter an address in this field, first test the address to be sure that mail sent to it is indeed delivered to you. If you use an invalid email address, no one will be able to reply to mail sent from this personality.

**User Name**—Enter the name you use to login to this email account. For example, in the incoming mail account `jcamp@pop.myfirm.com`, the login name is `jcamp`. The part after the at-sign “@” is the name of the incoming mail server. See *Incoming Mail* on page 298.

**SMTP Server**—Enter the name of the outgoing-mail server for this personality. SMTP stands for Simple Mail Transfer Protocol. Outgoing messages you send are routed through this server. If the computer selected by this personality’s incoming mail account also runs on an SMTP server, you can leave this field blank. See *Sending Mail* on page 302.
Allow Authentication—Eudora can log in to an SMTP server when sending mail, just like it does for receiving mail. Not all SMTP servers require or allow such authentication. Eudora will attempt authentication to servers that allow it. The preferred SMTP authentication method is CRAM-MD5. If CRAM-MD5 is not available, LOGIN or PLAIN will automatically be used. See Using SMTP Authentication on page 72.

Default Domain—Enter the domain name that Eudora automatically adds to an unqualified name addressed in messages sent from this personality. An unqualified name is a name that doesn’t have an “@” sign followed by a domain name. This can be used to save time when addressing large numbers of messages to users in the same domain. Also, different personalities can be used to send messages to different domains. For example, you can use one personality to send work-related messages to the domain myfirm.com, and another personality to send personal messages to the domain in your home email address or to your school account (for example, myschool.edu).

Default Stationery—Select the stationery to use for all outgoing messages sent from this personality from the drop-down list, or select <No Default> for no default stationery. For more details about using stationery with alternate personalities, see Linking a Signature and Stationery to a Personality on page 134 and Sending Mail on page 302.

Default Signature—Select the signature to use for all outgoing messages sent from this personality from the drop-down list. If you select a signature, Eudora automatically attaches that signature to the end of all outgoing messages sent from this personality. You can always change the signature in a particular outgoing message using the Signature drop-down list in the composition window. For more details about using signatures with alternate personalities, see Using a Signature on page 105 and Sending Mail on page 302.

NOTE: If the stationery you chose has a signature attached to it, that signature will override the signature you select here.

Secure Sockets when Sending—See the next section, Using SSL for Your Personalities on page 131.

Check Mail—If this is selected, mail checking is activated for this personality in the following ways:

- If you have specified a number in the “Check for mail every _ minutes” option in the Checking Mail options window, then when automatic mail-checks are performed at these intervals, mail for this personality is checked as well.
Each time you do a manual check for mail by choosing the Check Mail command from the File menu or via another method, mail is checked for this personality as well. When you create a personality, this option is checked by default.

If the Check Mail option is turned off, mail for this personality is not checked during manual or automatic mail checks unless you override the setting. To override and check the mail for the personality, choose **Check Mail** from the drop-down context menu (right-click) in the Personalities window.

**Incoming Mail**

This panel contains settings that identify and configure the incoming mail server to be used in receiving mail for this account.

**When Configuration = POP:**

**Sample Account Settings (Incoming Mail panel, POP configuration)**

Following are option descriptions for the Incoming Mail panel (POP configuration).

**Server**—This is the name of the incoming-mail server for this personality. All incoming messages to this personality are routed through this server.
Configuration—This indicates which email protocol the incoming mail server uses: POP (Post Office Protocol) or IMAP (Internet Message Access Protocol). Ask your email administrator which one to use, if you are not sure.

The settings in the rest of this panel depend on whether you’ve chosen POP or IMAP in this field. Settings for both configurations are described below.

**Leave mail on server**—If selected, then during mail checks, incoming mail for this personality is left on the incoming mail server and a copy is transferred to your PC. If this turned off, then when mail is checked, incoming mail for this personality is deleted from the incoming mail server after it is transferred to your PC. For more details, see Managing Your Mail on the POP Server on page 86.

**Delete from server after _ days**—This option has a check box for turning on or off and an edit box for specifying the number of days mail that was left on the POP server should be saved before being deleted. It is a good idea not to leave copies of your messages on the POP server indefinitely, as this will create mail storage problems on the server.

**Delete from server when emptied from Trash**—If selected, any messages that are deleted from your Trash mailbox are also deleted from the POP server. Messages are retained in your Trash mailbox until deleted. For details, see Managing Your Mail on the POP Server on page 86.

**Skip messages over _ K in size**—If selected, messages over the specified size are downloaded only in part. These messages include the first few lines, and a statement that says the message is not complete. This can be useful on slow connections. For details, see Managing Your Mail on the POP Server on page 86.

**Authentication style**—This specifies which POP account authentication technology to use for this personality: Passwords, Kerberos, APOP, or RPA. Ask your email administrator which one to use. If you use Eudora at home, most likely your Authentication Style is Password. CompuServe users should use the RPA authentication method.
When Configuration = IMAP:

**Sample Account Settings (Incoming Mail panel, IMAP configuration)**

Following are option descriptions for the Incoming Mail dialog box (IMAP configuration).

**IMAP Mailbox Location Prefix**—This specifies the mailbox location prefix that IMAP will use when locating your mailboxes on the incoming mail server. An example prefix is `/usr/mail`. Ask your email administrator what to enter here, if you are not sure.

**For new mail, download**—These two settings let you control the way incoming mail is downloaded from the IMAP server. One setting will always be marked.

- **Minimal Headers Only**—If selected, only a limited set of message headers is downloaded for each incoming message. The message’s status, From: field, date/time, server status, and subject are initially retrieved. Typically, you will see an open diamond for the server status, which indicates a partial retrieval. Opening or previewing the message retrieves the message body. If you have a non-text attachment, then opening it will retrieve the attachments.

- **Full message except attachments over _ K**—If this setting is selected and a number is entered in the edit box, any attachments larger than the specified size will not be downloaded with the message. If the setting is zero (default), all attachments are downloaded, regardless of size.
When I delete a message—These options (you must choose one) let you control the way you want your deleted messages handled.

- **Mark it as deleted**—Select this option to mark your messages on the IMAP for deletion. These messages are not removed from the server until you choose to remove them. See Deleting a Message from the Server on page 88.

- **Move it to (mailbox)**—Select this option to move your deleted messages to a specific mailbox. The default is your Trash mailbox.

**Automatically purge deleted messages**—Deleting an IMAP message marks it for deletion on the server, but it is not removed from the mailbox until the mailbox is purged.

- **Never**—Select this option to leave messages marked for deletion until you manually select to purge the mailbox.

- **Always**—Select this option to automatically purge the mailbox of deleted messages when you mark a message for deletion. No deleted messages will be kept in the mailbox.

- **When __% of messages are deleted**—Select this option to trigger purging of deleted messages when the percentage of deleted messages in your mailbox exceeds the number entered into this setting. For example, if you entered 20, your mailbox would be automatically purged when more than 20% of the messages were marked for deletion.

**Authentication style**—This specifies which IMAP account authentication technology to use for this personality: Passwords, Kerberos, or CRAM-MD5. Ask your email administrator which one to use. The default is CRAM-MD5. If CRAM-MD5 is not being used, then it will use passwords.

**Secure Sockets when Sending (or Receiving)**—See the next section.

**Using SSL for Your Personalities**

For information about Secure Sockets Layers (SSL), refer to About security (Sponsored and Paid modes only) on page 28.

**To access SSL settings for a personality**

1. From the Tools menu, choose **Personalities**.
The Personalities window appears.

2. For an existing personality, highlight the personality and choose **Properties** from the context menu.

   For a new personality, right-click anywhere in the Personalities window to display the context menu. Choose **New** and then choose **Skip directly to advanced account setup**.

   The Account Settings dialog appears.

3. For SSL when sending mail, choose the **Generic Properties** tab.

4. For SSL when receiving mail, choose **Incoming Mail** tab.

5. In the **Secure Sockets when Sending (or Receiving)** field, click the down arrow to display the drop-down menu.

   Secure Sockets drop-down menu

   - **Never**— Do not use SSL for server authentication and mail transfer security, even if SSL is available on the server.

   - **If Available STARTTLS** (default)— Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL, that is, if the server supports STARTTLS. If your server doesn’t support STARTTLS, mail transfers will occur successfully, but they will not be secured with SSL.

   - **Required, Alternate Port**— Use SSL for server authentication and mail transfer security by having Eudora automatically use the older style alternate port method for starting SSL. If your server does not support SSL on the appropriate ports, mail transfers will fail.
**Required STARTTLS**— Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL. If your server does not support STARTTLS, mail transfers will fail.

**NOTE:** If you use SSL and cannot make a connection when receiving or sending mail, you may need to check with your ISP to update any invalid SSL certificates. However, to override any issues with SSL when retrieving or sending mail, choose *Never* from the drop-down menu to make a successful connection.

**To display the most current information for an SSL connection between a server and Eudora since the last time you started Eudora**

1. Click *Last SSL info*.

   *The Eudora SSL Connection Information Manager window appears with SSL and certificate information.*

   **WARNING:** If you display the SSL information windows, make certain you don’t change any of the field information unless you are familiar with SSL.

---

**Modifying a Personality**

**To modify an existing personality**

1. From the Tools menu, choose *Personalities*, or if the Personalities window is in a visible tabbed window, click its tab.

2. Open the Personalities window and right-click the desired personality to display the drop-down context menu.

3. From the context menu, choose *Properties*.

   *The Account Settings dialog box appears.*

4. Make your changes in the Account Settings dialog box.

See *Account Settings Dialog* on page 125.

All options other than those specified in the New Account Wizard or the Account Settings dialog box cannot be changed for alternate personalities; they are effective for all. If you want to change other options for a personality or use a separate set of mailboxes for an account, see the section *Mail Transport* on page 410.
Deleting a Personality

You may delete any account except your dominant personality.

To delete a personality

1. From the Tools menu, choose Personalities, or if the Personalities window is in a visible tabbed window, click its tab.
2. Open the Personalities window and select the personality you want to delete.
3. Press the Delete key.
   
   A warning appears asking you if you’re sure you want to delete this personality.
4. Click OK.

The selected personality is deleted.

Linking a Signature and Stationery to a Personality

In Eudora, you can link a signature and a stationery to an existing personality via the Account Settings dialog box. For example, if you have a “Business” personality, you can link your “Business” signature and “Business” stationery to this personality. For creating signatures and stationery, refer to Adding a New Signature on page 106 and Creating New Stationery on page 111.

NOTE: Before you can link a signature and stationery to a personality, you need to create them first.

To link a signature and stationery to a personality

1. From the Tools menu, choose Personalities or if the Personalities window is in a visible tabbed window, click its tab.
2. Select the personality and right-click to display the drop-down context menu.
3. From the context menu, choose Properties.

   The Accounts Settings’ Generic Properties panel for this selected personality appears.
4. In the Default Stationery drop-down list, select the stationery for this personality.

5. In the Default Signature drop-down list, select the signature for this personality. Note that if the stationery you just selected has a signature linked to it, this signature overrides any signature you select here.

6. Click **OK**.

   *This personality is now linked with the stationery and signature you chose from the drop-down lists.*

**Selecting a Personality in a Message Header**

You can select the account you want to use directly in the header of your outgoing email message. Just click the arrow to the left of the From: field, and a drop-down list appears showing your different personalities. Select the personality you want to use for this message.

The current personality will have a dot next to the personality’s name. Also, to display the personalities drop-down list, press **Alt + R**.

See the following example.
Using Multiple Personalities (Sponsored and Paid modes only)

**Personality drop-down list in a message header**

![Personality drop-down list](image)

Using a Personality in a Message

The easiest way to create an outgoing message from a specific personality is to choose the one you want from the From: field’s drop-down list. See the previous section “Selecting a Personality in a Message Header. However, there are several other ways to do it.

1. **To use a personality in a message (alternate method)**
   
   1. From the Tools menu, choose **Personalities** or select the Personalities window tab if grouped in a displayed tabbed window.
   
   2. In the Personalities window, right-click the desired personality to display the drop-down context menu.
   
   3. From the context menu, choose **Message**.
   
   4. From the Message submenu, choose **New Message As**. Or, select the desired personality and press **Enter**. Or, simply double-click the desired personality.

   *A new message opens from that personality.*

When the composition window opens in response to any of the three message-creation methods as previously described, the default signature for the selected personality is used. But if a stationery file was selected or a default stationery file is specified in the account’s options, then the signature stored with the stationery file is used. However, you can always change the signature drop-down list in the composition window. For details, see Using a Signature on page 105.

Once you open a new composition message from a particular personality, you can change your message’s personality.
To change your message’s personality

1. In an open message, click the From: header or right-click to display the drop-down context menu.

2. In the From: field of the message header, choose the personality. Or from the context menu, choose Change Personality. From its submenu, select a new personality.

   *The From: field of the message header changes to the information associated with the new personality for that message.*

**NOTE:** If you are composing a message and decide to change the personality, the signature and stationery assigned to that personality in the Account Settings dialog box change as well.

When Eudora changes a personality as it responds to a message, it assigns the same personality under which it received the message. For example, if you receive a message sent to your Home account, your replies to that message are sent from your Home account.

There are two ways to change the personality of a response. The first is to initiate the response and then change the personality, using the drop-down context menu’s Change Personality submenu.

The second way is to change the personality associated with the original message to which you are responding. Open that message and change its personality using the Change Personality submenu. From then on, all of your replies to that message will be sent from the newly assigned personality. The message does not have to be open. Just right-click on a message or set of messages in a mailbox’s TOC. Select Change Personality and select the desired personality.

**NOTE:** You can also set up a filter to automatically assign a desired personality to incoming or outgoing messages that satisfy the filter criteria. See the Make Personality action under Filter Actions on page 170.
Using Multiple Personalities (Sponsored and Paid modes only)
Opening a Mailbox

To open a mailbox, select it from the Mailbox menu, or double-click it in the Mailboxes window.

**NOTE:** The unread message icon appears in the Mailbox menu whenever a mailbox or folder contains unread messages that are less than five days old. Also any mailboxes or folders in the Mailboxes window that contain unread messages are displayed as bold.

Understanding the Components of a Mailbox

Mailbox windows contain all of your incoming and outgoing message summaries. If the “Show message preview pane” option is selected in the Viewing Mail options window, mailbox windows also show the message preview pane, the bottom half of the window in the figure below. See Viewing Mail on page 317.

**To open a mailbox**

- From the Mailbox menu, choose the mailbox you want to open, or double-click its icon or name in the Mailboxes window.

*Mailbox window*
Message Summaries

Each line in the list portion of a mailbox window represents a message and is called a message summary. Outgoing messages that are in any mailbox other than Out are shown with italicized message summaries.

To select one or more message summaries, use one of the following options:

- To select one summary, click it.
- To select a consecutive range of summaries, select a summary, hold down the Shift key, and select another summary. Or, drag the mouse over the summaries to select them—as long as you begin on an unselected summary.
- To select all of the summaries that have the same information in a particular column, hold down the Alt key and click one column in the summary. For example, if you click the Status column for one summary, all of the summaries with that status are selected.
- To make non-consecutive selections, hold down the Ctrl key and select summaries.
- To find messages by name or subject, type the first few letters of a name or subject, and Eudora selects the message.

Each message summary is divided into columns. The column names are shown below with the corresponding icons that appear in the column headings.

- Status
- Junk score
- Priority
- Attachments
- Label
- Sender/Recipient (Who)
You can show or hide these columns using the Mailboxes options window. See Mailboxes on page 320.

A message’s Status, Priority, Label, Personality, and Server Status can be changed directly in the mailbox window. To do this, select the messages you want to change and click the right mouse button inside the selection. Select an option from the drop-down list to make your change.

To select the display of lines in the message summaries portion of mailbox windows—horizontal lines to separate summaries and vertical lines to separate columns—select the Show mailbox lines option in the Mailboxes options window.

### Status Column

This column displays the message status, which is one of the following:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Status Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🔄</td>
<td>Message has not been read (all mailboxes except Out), or is queueable or sendable but not queued or sent (Out mailbox only).</td>
</tr>
<tr>
<td>&lt;blank&gt;</td>
<td>Message has been read (all mailboxes except Out), or is not yet able to be queued or sent because it has no recipients in the To or Bcc: fields (Out mailbox only).</td>
</tr>
<tr>
<td>🔄</td>
<td>Message has been replied to.</td>
</tr>
</tbody>
</table>
You can change the status of one or more selected messages, or an open message, from Read (blank) to Unread (●) or from Unread to Read by pressing Shift+Space (all mailboxes except Out).

Priority Column

This column displays the message priority. You can use the drop-down list to set a particular priority.

- Highest priority
- High priority
Working with Mailboxes

Normal priority

Low priority

Lowest priority

For more information on message priorities, see Setting the Message Priority on page 42.

Attachments Column

If a message has attached documents, this column displays the attachment icon, a paper clip holding a sheet of paper.

Label Column

This column displays the message label. You can assign labels to messages, either manually or automatically using filters. See the section Filtering Messages on page 161. When a message summary is assigned a label, the entire summary changes color to match the label color.

To assign a label to an existing message

1. Select the message in the TOC you want to label.
2. Right-click to display the drop-down list.
3. From the drop-down list, choose Change Label. Or from the Message menu, choose Change then Label.

The Label submenu appears.

4. Choose the label you want for this message.

NOTE: Label colors and titles are assigned using the Labels options. See Labels on page 331

Sender/Recipient Column (Who)

This column shows the sender of the message (for incoming messages) or the intended recipients (for outgoing messages).
Date Column

This column displays the date and time the message was composed, or, for timed messages, the date and time the message is scheduled to be sent. Date formats, including age-sensitive indications such as the day of the week or “Today,” are set in the Date Display options window. See Date Display on page 328.

Size Column

This column displays the size of the message in kilobytes, K (1 K = 1,024 bytes). Also, an indicator in the Size column indicates if the body of the message is empty.

Server Status Column (POP)

This column displays the action that is done to the corresponding incoming message on the server. The next time you check mail, the server status you requested is automatically completed.

- **Fetched**
  - Don’t change the message on the server. A solid diamond indicates that the message has been fetched; an open diamond indicates that the message has not yet been fetched.

- **Not fetched**

- **Fetch**
  - Retrieve the whole message from the server.

- **Delete**
  - Delete the message from the server.

- **Fetch then Delete**
  - Retrieve the whole message, then delete it from the server.

**NOTE:** To control the mail transfer for a POP server, you can also use the Mail Transfer options window. For details, see Checking for Mail with Special Server Instructions on page 89 and Checking Mail on page 295.
Server Status Column (IMAP)

This column displays the action that is done to the corresponding incoming message on the server. The next time you check mail, the server status you requested is automatically completed.

- **Fetched**: The message has been fetched.
- **Headers Only**: Retrieve message headers from the IMAP server, but body and attachments have not been fetched.
- **Delete**: Delete the message from the server.
- **Fetched Body, but no Attachments**: Retrieve the whole message, including attachments.

MoodWatch Column

MoodWatch scans each word and phrase in each message in the mailbox for offensive language. The level of offensiveness is indicated by the appearance of one, two, or three red chili peppers, with three red chilies being the most offensive and one the least.

- **There is no offensive language in the message.**
- **There may be a slight bit of offensive language in the message.**
- **There may be offensive language in the message.**
- **There is offensive language in the message.**

Less offensive text in the message is underlined with a green squiggly line. More offensive text in the message is underlined with both a green and red squiggly line.
Subject Column

This column displays the subject of the message. The sender originally typed this information into the message header, but you can modify it. See on Editing Incoming Messages on page 84.

Displaying and Resizing Columns

To indicate which columns you want displayed in your mailboxes

1. From the Tools menu, choose Options.
2. Scroll through the category list, and select Mailboxes. The Mailboxes options window appears.
3. In the Show Mailbox Columns list, select the column boxes you want to display. If you don’t want to display a column, just deselect the box. See Mailboxes on page 320.

To resize a column in a mailbox window, move the mouse pointer until it is over the column heading divider to the right of the column you want to resize, then drag the divider to the position you want. The column divider moves to the new location, and the mailbox is redrawn.

You can shrink a column only as far as its left divider. If you do that, a double divider line appears in place of the column, and its contents are hidden. To redisplay the column, drag the right divider line to the right.

Using the Mailbox Size Display

In the lower left corner of the message summary part of each mailbox window, three numbers show the size information for that mailbox. The first is the number of messages in the mailbox; the second is the total amount of space those messages require; the third is the amount of disk space that is wasted with the mailbox.

Mailbox size display

Wasted space is created when messages are deleted or transferred from a mailbox.

TIP: Check Show count of selected messages in Size box under the Mailboxes options to display 4 sets of numbers. The first number will be the selected message count.
**To manually clean up the wasted space in all mailboxes**

- Click the mailbox size display (for that mailbox only), or from the **Special** menu, choose **Compact Mailboxes** for all mailboxes.

**TIP:** Try not to keep too many messages in your In, Out, or Trash mailboxes because it slows down your system's performance. If you wish to keep these messages, it's better to transfer them to other mailboxes.

**Message Preview Pane**

If the “Show message preview pane” option is selected in the Viewing Mail options window, then the **message preview pane** appears in roughly the bottom half of the mailbox window. See **Viewing Mail** on page 317.

The message preview pane shows the key headers and the message body of the currently selected message in the message summary list. If the full message body is not visible in the preview pane, scroll bars are displayed, allowing you to view the rest of the message. Only one message in a mailbox can be previewed at a time.

To move the keyboard focus from the message summary list to the message preview pane and back again, press Tab or F6. Or simply click in the preview pane to put the focus there.

When keyboard focus is in the preview pane, you can do any of the following, as you can in an open incoming message window.

- Press the spacebar to page down through the message.
- Use the arrow keys, as set in the Miscellaneous options window (unmodified or with Ctrl or Alt), to switch to the next or previous message in the mailbox. See **Miscellaneous** on page 356.
- Use standard keyboard shortcuts such as Ctrl+R for Reply, Ctrl+D for Delete, etc. See **Eudora Shortcuts** on page 397.
- Right-click anywhere in the preview pane to display a drop-down list with commands appropriate for the previewed message.
- Click an attachment icon or name to open the attachment.
- Click a URL (hot link) to launch the application for that URL.
- Press Ctrl + Shift + F to open the Find dialog box in a highlighted message.
If the “Show message preview pane” option is selected in the Viewing Mail options window, you can press F7 to show and hide the preview pane within the current mailbox only. However, this does not control the visibility of the preview pane in other mailboxes. Also, you can do this by clicking on the separator bar between the message list and the preview pane.

You can change the height of the preview pane relative to the message summary list. Just position the mouse pointer over the separator bar between the list and the preview pane and drag the bar up or down.

If the “Show message preview pane” option is turned off in the Viewing Mail options window, only the message summaries are shown in any mailbox window.

If the preview pane option is selected and the “Mark previewed messages as read after _ second(s)” option is selected in the Viewing Mail options window, the current message is marked as read (blank in the Status column) after the specified number of seconds. You can always change the message’s status back to Unread (•) by pressing Shift+Space while the message is selected or open (press again to change back to Read). If the “Mark previewed...” option is turned off, previewed messages are never automatically marked as read. For more information, see Viewing Mail on page 317.

**NOTE:** Eudora performs the auto-marking behavior only when you manually select or preview messages, not when it performs actions such as automatic mail checks or filtering.

### Creating Mailboxes and Folders

Eudora lets you create mailboxes to hold messages, and folders to hold mailboxes.

There are three ways to create mailboxes and folders.

- Using the New command from the Mailbox menu and folder submenus.
- Using the New command from the drop-down context menu in the Mailboxes window. See Using the Mailboxes Window on page 150.
- Using the New command from the Transfer menu. See Transferring Messages on page 158.
NOTE: Depending on whether your incoming mail server uses the POP or IMAP protocol, there are some differences in the way mailboxes and mail folders are created, stored, and managed. For more information, see Mailbox and Folder Management: POP vs. IMAP on page 152.

Creating a Mailbox or Folder Using the Mailbox Menu

To create a new mailbox or mail folder

1. From the Mailbox menu, choose New, or from a mail folder submenu (to put the mailbox in that folder).

   The New Mailbox dialog box appears.

   **New Mailbox dialog box**

   ![New Mailbox dialog box](image)

   2. To create a mailbox, type in the new mailbox name and click OK. The mailbox is created and added to the Mailbox and Transfer menus and to the Mailboxes window.

   3. To create a mail folder, type the name of the new mail folder and select the Make it a folder option. Click OK to create the folder.

   The New Mailbox dialog box appears again.

   4. Type the name of a mailbox to create within the new folder, then click OK. The new folder and its mailbox are displayed in the Mailbox and Transfer menus and in the Mailboxes window.
Using the Mailboxes Window

The Mailboxes window lets you create new mailboxes and folders, remove and rename them, and move mailboxes among folders. Mailboxes or folders that are bolded have unread messages.

By default, the Mailboxes window is provided as the first window in a five-window tool group docked vertically to the left side of the main Eudora window.

To manage mailboxes and folders from the Mailboxes window

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window's tab if it is part of a visible tabbed window group.

   For more information on how to manipulate the Mailboxes window alone and as part of a tabbed window group, see Managing Windows in Eudora on page 197.

2. To open a mailbox or folder within the window, double-click it, or click it once and press Enter. You can move among the folders and mailboxes using the up and down arrow keys, or close or open folders using the left and right arrow keys.

3. You can start typing the name of the mailbox or folder you want, and it is highlighted when you have typed enough unique characters to identify it (the item must be displayed, so a mailbox that is in a closed folder cannot be selected).
4. Right-click any item in the Mailboxes window and a drop-down list appears whose commands let you, depending on the item, create, find messages, remove, and rename mailboxes and folders, open existing mailboxes and folders, and empty the trash from the Trash mailbox.

The folder trees displayed in the Mailboxes window, and some of the operations available from the drop-down list, depend on what protocol your mail server uses, POP or IMAP. For more information on these differences, see Mailbox and Folder Management: POP vs. IMAP on page 152.

Creating a New Mailbox or Folder

**To create a new mailbox or folder in the Mailboxes window**

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window's tab if it is part of a visible tabbed window group.

2. Right-click a folder.

3. From the drop-down list, choose New.

   A dialog box appears requesting the name of the new mailbox or folder.

4. Type in the new name and select the Make it a folder option if you want to make it a folder; click OK. If you chose to make it a folder, enter the name of the mailbox within the new folder when the dialog box appears again, and click OK.

   The new mailbox or folder appears in the lists and is added to the Mailbox and Transfer menus.

Renaming a Mailbox or Folder

**To rename a mailbox or folder**

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window's tab if it is part of a visible tabbed window group.

2. Click the name of the mailbox or folder, pause, then click again to highlight the name. Or, right-click the item and choose Rename, or click once on the item and press F2.

3. Type in the new name. Press Enter to accept your change, or Esc to cancel it.
Moving a Mailbox from One Folder to Another

To move a mailbox from one folder to another

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window’s tab if it is part of a visible tabbed window group.
2. Click to select the mailbox you want to move.
3. Drag it to where you want it.

Removing a Mailbox or Folder

To remove a mailbox or folder

WARNING: You cannot undo this deletion.

1. From the Tools menu, choose Mailboxes, or click the Mailboxes window’s tab if it is part of a visible tabbed window group.
2. Right-click it and choose Delete from the drop-down list, or click once on it to highlight it and then press the Delete key.

If you choose to remove a mailbox in which messages are still stored, or a folder in which other mailboxes or folders are stored, you are prompted to confirm the deletion for each such item selected. Click Remove it to delete the current item for which you are being prompted, or click Remove all to remove all items selected for deletion and no further prompts will appear. Or click Cancel to cancel the deletion. If you delete a non-empty mailbox or folder, all messages, mailboxes, and folders contained within the mailbox or folder are also deleted.

Mailbox and Folder Management: POP vs. IMAP

The location of your mailboxes and mail folders depends on whether your incoming mail server for your account uses the POP or IMAP protocol.

If your incoming mail server uses POP, then all of your mailboxes and mail folders are created and stored on your computer. If your incoming mail server uses IMAP, then all of your mailboxes and mail folders are created and stored on the IMAP server.

The parallel situation holds true if you have multiple email accounts: mailboxes and folders for all of your POP accounts are stored on your computer; mailboxes and folders for all of your IMAP accounts are stored on the respective IMAP servers.
Mail folders stored on an IMAP server can contain not only mailboxes, but also messages. Mail folders stored on a POP server can contain only mailboxes, not messages.

You create an IMAP server account using the New Account Setup wizard for your dominant personality, or using the Account Settings dialog box accessed from the Personalities window. See Getting Started on page 293 and Using Multiple Personalities (Sponsored and Paid modes only) on page 115.

The Mailboxes window is the main tool for managing your IMAP mailboxes and mail folders. In the Mailboxes window, right-click one of the folders or mailboxes in an IMAP hierarchy and select an item from the drop-down list. See Using the Mailboxes Window on page 150 for more information.

**NOTE:** The additional commands for IMAP are Refresh Mailbox List and Resynchronize Mailbox.

Some mailboxes stored on your IMAP server may have been created by others and made accessible to you. For some of these mailboxes, you may have both “read and write” permission; that is, you can read the messages stored in them, can change or delete the messages. Other mailboxes may give you only “read” permission; you can only read the messages, not change or delete them.

If you have multiple personalities (email accounts) and the incoming mail servers for all of them use POP, then you will have only one top-level mail folder, named “Eudora Mail” by default. If the incoming mail server for at least one of your personalities uses IMAP, then you can have multiple top-level mail folders; one to hold mail from all of your POP account, and one top-level folder for each of your IMAP accounts. The name of a top-level IMAP folder is the personality name for that IMAP account.

For more information on managing your mail on POP and IMAP servers, see Managing Your Mail on the POP Server on page 86 and Managing Your Mail on the IMAP Server on page 91.
Deleting a Message

As a safeguard against inadvertent deletions, two steps are used to delete a message from your computer: first put the message in the Trash, then empty the Trash. If your incoming mail server uses IMAP, the procedure is slightly different, as described later.

POP Procedure

To put a message in the Trash

1. Click to select the message.

2. From the Message menu, choose Delete, or from the Transfer menu, choose Trash. Also, you can just press the Delete key or click the Delete toolbar button.

   The message is transferred to the Trash mailbox.

   NOTE: To cancel a deletion to the Trash, from the Edit menu, choose Undo.

To delete the messages in the Trash mailbox (that is, remove them permanently from your computer)

- From the Special menu, choose Empty Trash. Or, if the Mailboxes window is open on your desktop, right-click on the Trash mailbox in the window and choose Empty Trash from the drop-down menu.

You can set up Eudora to warn you if you try to delete unread, queued, or unsent messages. To do this, use the Extra Warnings options windows to select those options. See Extra Warnings on page 341.

Quitting Eudora empties the contents of the Trash mailbox when the Empty Trash when exiting option in the Miscellaneous options is selected. See Miscellaneous on page 356.
If you want to delete just a few messages from the Trash mailbox, open the Trash mailbox, and do the following

1. Click to select the desired messages.

2. From the Message menu, choose Delete, or press the Delete key. Deleting a message from the Trash removes it completely.

IMAP Procedure

Deleting a message on an IMAP account requires two steps: first mark it for deletion, then purge the deleted message from the server.

To mark for deletion a message stored in an IMAP mailbox or folder

1. Click to select the message.

2. From the Message menu, choose Delete.

   The message disappears from your mailbox.

To view messages that have been marked for deletion in an IMAP mailbox or folder

1. From the Tools menu, select Mailboxes

   The Mailboxes window opens. (Appears docked on the left side of the Eudora window by default).

2. In the Mailboxes window, right click on the IMAP mailbox.

   A context menu appears.

3. Place a check mark next to Show Deleted Messages

   Messages that are marked for deletion have a red X in the server status column.

To unmark the message for deletion

1. Follow the steps above to show deleted IMAP messages.

2. Click to select the message.

3. From the Message menu, choose Undelete, or right click on the message and select Undelete message.
Organizing Your Messages

To remove all messages marked for deletion in the current IMAP mailbox, choose **Purge Messages**. The messages are completely removed not only from your PC but also from the IMAP server.

**TIP:** Once you remove marked messages using the “Purge Messages” command, these messages are gone and cannot be restored; so use this command with caution.

Automatically Purging IMAP deleted messages

Eudora can be configured to automatically purge deleted IMAP messages.

**To configure Eudora to automatically purge deleted IMAP messages**

1. From the **Tools** menu, select **Personalities**.

   *The Personalities window appears.*

2. Right click on your IMAP personality.

   *A context menu appears*

3. Select **Properties**.

   *The Account Settings Dialog appears.*

4. Click to select the **Incoming Mail** tab.

5. Select one of the three options under **Automatically Purge deleted messages**:  

   **Never**—Select this option to leave messages marked for deletion until you manually select to purge the mailbox.

   **Always**—Select this option to automatically purge the mailbox of deleted messages when you mark a message for deletion. No deleted messages will be kept in the mailbox.

   **When __% of messages are deleted**—Select this option to trigger purging of deleted messages when the percentage of deleted messages in your mailbox exceeds the number entered into this setting. For example, if you entered 20, your mailbox would be automatically purged when more than 20% of the messages were marked for deletion.
Automatically Deleting Attachments

When you delete messages, you can have their attachments automatically deleted. To do this, select the “Delete attachments when emptying Trash” in the Attachments options windows. To do this, be sure the attachments are still in the Attach Directory or the directory you have specified for attachments. If you have this option selected, and want to delete a message but save its attachment, move the attachment into another directory before deleting the message. See Attachments on page 311.

Transferring Messages

You can transfer messages to any of your mailboxes. There are several ways to do this.

- Click to select the message(s) you want to transfer, then choose a mailbox from the Transfer menu.
- Click to select the message(s) you want to transfer, then right-click on the selection and choose a mailbox from the Transfer drop-down menu.
- Drag a message summary to an open mailbox window or to a mailbox icon in the Mailboxes window.

To put a copy of a message in another mailbox instead of transferring the message, hold down the Shift key and use one of the transfer options above. This is useful if you want to file a message in more than one mailbox.

If you try to transfer a message to the Out mailbox, an alert appears informing you that some header information may be removed from the message during transfer. Click Yes to transfer the message.

TIP: Don’t forget to clean out your Out mailbox once in awhile to increase your system performance.

NOTE: You can undo mailbox transfers using the “Undo” command from the Edit menu.
Using the Transfer Menu

The Transfer menu is one way to transfer messages among your mailboxes. With a current message open, or message summaries selected, choose a mailbox from the Transfer menu. The messages are transferred from their previous mailbox to the mailbox you selected.

Dragging Messages

You can drag messages from one mailbox to another using the message summaries or by clicking in an open message window.

To drag a message summary to another mailbox

1. Click to select the message summary or summaries.
2. Drag the summary into any open or minimized mailbox window, or any mailbox in the Mailboxes window.

   When you release the mouse button, the message is transferred.

To drag an open message to another mailbox, click and drag the message into any open mailbox or any mailbox in the Mailboxes window. When you release the mouse button, the message is transferred.

When dragging to the Mailboxes window, pause over a closed folder. The folder temporarily opens making its mailboxes visible so that you can complete the drop operation. The folder closes again when you complete or cancel the drop.

NOTE: You can only drag messages around if the “Allow drag and drop transfers” option is selected in the Mailboxes options window. See Mailboxes on page 320.

Creating a Mailbox or Folder During Transfer

To create a mailbox and transfer the current message into it at the same time

- From the Transfer menu, choose New instead of the name of a mailbox.

   The New Mailbox dialog box appears.

You can create a new mailbox or mail folder. For details, see Creating Mailboxes and Folders on page 148. When you are done, the current message is transferred into the new mailbox.
To create the new mailbox without transferring the message into it, select the **Don’t transfer, just create mailbox**.

Contextual Filing (Sponsored and Paid modes only)

You can highlight a word or part of a word anywhere in a message and transfer the message to a mailbox that contains that word within the mailbox name.

For example, if you have a mailbox named “Old Newsletters,” you can highlight the word "Newsletter" and transfer the entire message to the Old Newsletters mailbox.

**To perform a contextual filing**

1. Highlight the word (or words).
2. Right-click the word.

*The contextual filing submenu appears showing the mailbox(es) with similar name(s).*

**Contextual filing submenu**

![Contextual filing submenu image]
Organizing Your Messages

Filtering Messages

NOTE: If you are using Eudora in Light mode, you have access to fewer features when using Eudora’s Filtering functionality.

Many of the email management functions in Eudora can be done automatically using filters. For example, you can automatically reply to a request for information, transfer all the messages from your children into a personal mailbox, and label all the messages from your customers as “Hot.”

A filter can be thought of as a personal “valet” or “butler” that takes your mail and does certain things to it that you specify. One kind of valet might watch for particular mail from a mailing list and move it into a mailbox, open the message, and play a sound. Another might look for other kinds of mail and give it a label color, a high priority, and a new subject line. You can create as many of these “valets” or “butlers” as you like, and you can give each of them from one to five instructions on what to do with your mail that fits a certain set of criteria, based on information in the header of the message and the message body.

Quick and Simple Filters with the Make Filter Command

The simplest filters are those that transfer incoming messages to a particular mailbox based on the sender of the message or one or more of the recipients. For example, each time you check your mail, you may want to have Eudora take all of the incoming messages it receives from your friend Joe and automatically transfer them into a mailbox you’ve called “Mail from Joe.” To get Eudora to do this, you set up a simple filter.

For new users, the Make Filter dialog box provides an easy way to learn how to use filters. Once you are comfortable with the simple filters created this way, you can go on to make more complex, powerful filters using the Filters window. Experienced users will find that the Make Filter dialog box provides a rapid, convenient method for making a simple transfer filter.

To open and use the Make Filter dialog box

1. Open an incoming or outgoing message containing the information you want in your filter, or select one or more message summaries in a mailbox.

2. From the Special menu, choose Make Filter. Or right-click in the body of the open message, or in the selection of message summaries, or in the preview pane for a single-selected message, and choose Make Filter from the drop-down menu.

The Make Filter dialog box appears.
Organizing Your Messages

**Make Filter dialog box with sample filter**

<table>
<thead>
<tr>
<th>Match Conditions</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Incoming</strong></td>
<td>✓</td>
<td></td>
</tr>
<tr>
<td><strong>Outgoing</strong></td>
<td></td>
<td>✓</td>
</tr>
<tr>
<td><strong>Manual</strong></td>
<td></td>
<td>✓</td>
</tr>
<tr>
<td><strong>Contains:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>From:</strong></td>
<td><a href="mailto:NASANews@hq.nasa.gov">NASANews@hq.nasa.gov</a></td>
<td></td>
</tr>
<tr>
<td><strong>Any Recipient:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Subject:</strong></td>
<td>Hubble Sees a Neutron Star Alone in Space</td>
<td></td>
</tr>
</tbody>
</table>

**Action**

- **Transfer to New Mailbox**
  - **In Folder:** Eudora
  - **To:** NASANews@hq.nasa.gov

- **Delete Message (Transfer to Trash)**

**Match Conditions**

The Match Conditions area of the dialog box helps you set up the criteria that will determine whether a particular message will be acted on by this filter.

You can specify that the type of messages you are interested in should be Incoming and/or Outgoing. You can also specify that this should be a Manual filter (described below). You can check and uncheck any combination of the three boxes: Incoming, Outgoing, and Manual.

**NOTE:** If the messages you selected when you chose Make Filter were in any mailbox other than your Out mailbox, the Incoming and Manual check boxes are checked automatically. If the messages you selected were in your Out mailbox, the Outgoing and Manual check boxes are checked automatically.

- **Incoming**—If this box is selected, then any incoming message that satisfies the content match condition you specify will be acted on according to the action you’ve specified in this filter.

- **Outgoing**—If this box is selected, then any outgoing message that satisfies the content match condition you specify will be acted on according to the action you’ve specified in this filter. The matching and action occurs after the message has been sent.
• **Manual**—If this box is selected, then when you select one or more message summaries in a mailbox window and choose Filter Messages from the Special menu, the incoming and/or outgoing messages selected that satisfy the content match condition you specify will be acted on according to the action you’ve specified in this filter. This option is useful when testing your filter or manually filtering messages that you have already received or sent.

**NOTE:** If Incoming or Outgoing is selected (or both), the filter is automatic; that is, Eudora performs the filter operation behind the scenes, automatically, when you send or check mail. If you now also select Manual, the filter becomes both automatic and manual, meaning, you can now manually perform the filter operation by selecting Filter Messages from the Special menu while message summaries are selected in a mailbox window—but Eudora still filters the messages automatically during mail sends and checks. In short, checking Manual does not “turn off” Eudora’s automatic filtering for that filter.

Also, making a filter manual also gives you a good way to test the filter to your needs as soon as you set it up, rather than having to wait until the next time you send or check mail. After creating a manual filter with the Make Filter dialog box, check to see that it does what you want by selecting Filter Messages from the Special menu. Your open message or selected message summaries are immediately filtered according to the new filter.

You can choose one of three content matches: From, Any Recipient, or Subject.

**From** (selected by default)—Select to match the message against the From: field—the sender—of the messages you selected. You can then edit the field. The From: field of a target message must contain the information in this box but does not have to exactly equal it. Note that if you selected multiple messages and they do not have a common sender, the From: field is unselectable and is left blank.

**Any Recipient**—Select to match the message against any of the recipients in the messages you selected (recipients are contained in the To: and Cc: fields and, in an outgoing message, the Bcc: field). Choose one recipient from the drop-down menu (accessed from the menu button next to the field), or edit the text in the field. Note that the information you enter in the field must be contained in any of the recipient fields of the target message but does not have to exactly equal any recipient field.

**Subject**—Select to match the message against the Subject: field of the messages you selected. If you have selected multiple messages and they do not have a common subject, this field is left blank. In either case you can edit the field. The subject line of a target message must contain the information in this box but does not have to exactly equal it.
Action Area

The Action area of the window lets you determine the one action that will be performed on messages that satisfy the Match Conditions you’ve specified for this filter. The three action choices are all message-transfer actions; they transfer the filtered message to a mailbox. For messages that satisfy your match conditions, your simple filter will transfer the messages to either a new mailbox, an existing mailbox, or your Trash mailbox.

**Transfer to New Mailbox**—Select to transfer the filtered message to a new mailbox that you will specify. The text field is filled in with a suggested new-mailbox name based on your selected content match condition (From, Any Recipient, or Subject). You can change this name if you like. The In Folder field is a label showing you the folder in which your new mailbox will be created. By default, this is the same folder that holds the mailbox containing the messages you’ve selected. The new mailbox is created as soon as you create this filter.

You can set the value of the “In Folder” field to your own desired default folders based on the chosen match condition: From, Any Recipient, or Subject. Use the three Eudora.ini file entries FilterFromFolder, FilterRecipFolder, and FilterSubjectFolder, respectively. Enter the path as it appears on the mailbox window. For example: FilterFromFolder=mail-lists\entertainment. See Eudora.ini File on page 445.

**Transfer to Existing Mailbox**—Select to transfer the filtered message into one of your existing mailboxes. Select the mailbox from the button next to the field. The default mailbox is the In box. When you click the button, a version of the Transfer menu appears, letting you choose the mailbox from the Transfer menu.

**NOTE:** Also, you can create a new mailbox in the Filters window by choosing New from the drop-down mailbox menu. This is handy for creating a new mailbox within another folder.

**Delete Message** (Transfer to Trash)—Select to delete the message that satisfies the filter match conditions, transferring it to your Trash mailbox. This feature is useful for deleting junk email, or “spam” as it is called in the Internet world. Test this filter to make sure messages you really want to keep don’t go to the Trash mailbox.
Buttons

- **Create Filter**—When you have set up your match conditions and filter action, click Create Filter to create the filter. The filter is added to the bottom of your filters list in the Filters window (discussed below). The filter is available immediately and will act on messages that satisfy the conditions at the next mail check, mail send, or selection of the “Filter Messages” command, as appropriate. Filters are processed from top to bottom of the filters list.

- **Add Details**—Alternately, after setting up the filter information, click Add Details to both create your filter and also open the Filters window. You can add additional information to your new filter and make it more powerful or just change it. The filter is added to the bottom of your filters list and is immediately available in the form in which it was set up in the Make Filter dialog box. Any changes you make in the Filters window must be saved before they become effective. Following is more information on the Filters window.

- **Cancel**—Click Cancel to cancel the filter if you change your mind. The filter is cancelled and your changes are not saved.

Detailed Filters with the Filters Window

The Make Filter dialog box, discussed previously, lets you create quick, simple filters that perform one operation—a mail transfer—based on one match condition—a piece of header information. The Filters window lets you create more complex, powerful filters that use multiple match conditions and perform multiple filter actions. You can also use the Filters window to create simple filters such as those created by the Make Filter dialog box.

**To open the Filters window to create or modify a filter**

1. From the Tools menu, choose Filters, or click on the Filters window’s tab if it is part of a visible tabbed window group. The Filters window appears, and any filters you have created are listed on the left. For more information on how to manipulate the Filters window alone and as part of a tabbed window, see Managing Windows in Eudora on page 197.
2. To add a new filter, click **New** or to modify a filter, click an existing filter to select it.

3. Select the options for how you want the filter to be used: as an automatic filter to be invoked on any Incoming and/or Outgoing mail and as a Manual filter that can be invoked when you choose **Filter Messages** from the Special menu. Any combination of these options works.

4. Define the criteria for the filter by using the header item drop-down menus and the text fields to specify which header items should include a particular string of text. You can define two related terms for the criteria so that your filter is as specific as possible. For details, see **Filter Criteria (Match Area)** on page 167.

5. Define the action or actions to be taken on messages that fit the criteria and save the filters. For details, see **Filter Actions** on page 170.

Eudora places a small icon to the left of the filter in the list for some action you have selected for that filter—up to five icons/actions per filter.

**NOTE:** Filters are automatically named based on the first term of the criteria for the filter. You can reorder them by dragging a filter up or down in the list.
You should reorder your filters to indicate what order you want your messages filtered, and grouping your filters will make them easier to find.

When the filters are invoked (automatically or manually), each message is matched against each filter in order from top to bottom. If the message meets a filter’s criteria, the actions are done as specified until there are no more actions. Then the message is matched against the next filter. If at any point a “Skip Rest” action is done, the remaining actions for that filter (if there are any) are performed on that message, the rest of the filters in the filters list are skipped for that message. The next message is filtered, again going from top to bottom down the filters list.

Filter order matters when a message addressed to you is also sent to a mailing list you’re on. If you have a filter that always places messages addressed to you into a personal mailbox, then you want Eudora to perform the filter for your personal mailbox before any other filtering.

You can change the width of the filters list to create more or less space for your list. To do this, put the arrow over the vertical “splitter” bar to the right of the list and drag the line to the left or right.

The next two sections refer exclusively to the Filters window. For information on the match conditions and filter actions in the Make Filter dialog box, see Quick and Simple Filters with the Make Filter Command on page 161.

Filter Criteria (Match Area)

Each filter in the Filters window can use one or two “terms” as its criteria, connecting them as appropriate with the conjunction drop-down menu.

**Header**—Use this field to specify which message header items you want the filter to search. You can choose an option from the drop-down menu or enter one yourself. This is helpful if you want to use a header item that does not appear on the menu, such as X-Priority. The selections are as follows:

- To:
- From:
- Subject:
- Cc:
- Reply-To:
• «Any Header»
• «Body»
• «Any Recipient»
• «Personality»
• «Junk Score»

The «Any Header» option searches all message headers (including hidden headers that are shown with the BLAH BLAH BLAH option). The «Body» option searches the message body. The «Any Recipient» option searches all possible recipient items (To:, Cc:, Bcc:). The «Personality» option searches the name of the personality (email account) associated with the message. You will most likely want to search for both the To: and Cc: fields when receiving mail. If so, you should use «<Any Recipient>> instead of To: or Cc:.

Use the match type ("contains" is the default) drop-down menu to control how the header item is matched with the text string in the text field. The match options are as follows:

contains or doesn’t contain—If the specified header item contains or does not contain the text string, filter the message. It allows other text to surround the text string.

is or is not—If the specified header item is or is not an exact match of the text string, filter the message.

starts with or ends with—If the specified header item starts with or ends with the text string, filter the message. The starts with item refers to the first non-whitespace character after the colon, so any spaces after the colon are ignored.

appears or doesn’t appear—If the header item appears or does not appear in the message, filter the message (the text field is ignored). This is useful for filtering messages based only on the types of fields they contain. For example, some messages contain a Reply-To: header, some don’t.

intersects nickname—If the text string is included in a nickname, whether it is a full address or a nickname within the nickname, filter the message. In other words, the filter looks in all of your address books for the nickname that appears in the header of the message. If it finds it, it filters the message accordingly.

doesn’t intersect nickname—If the text string is not included in a nickname, whether it is a full address or a nickname within the nickname, filter the message.
intersects address book—If the text string or nickname is included in any one of your address books, whether it is a full address or a nickname within the nickname, filter the message. In other words, the filter looks in all of your address books for all nicknames. If the nickname that appears in the header of the message is in the address book, Eudora filters the message accordingly. This match criterion is good to use if you wish all messages that are not from the entries in your address book to go in other mailboxes. This is an alternate method to control SPAM.

doesn’t intersect address book—If the text string or nickname is not included in an address book, whether it is a full address or a nickname within the nickname, filter the message.

matches regexp (case insensitive) (Sponsored and Paid modes only)—If the specific item matches the regular expressions characters with case insensitivity, filter those messages.

Regular Expressions is an advanced and complex method of searching for text. For more information, see Regular Expressions (Sponsored and Paid modes only) on page 173.

Regular Expression is a search string that uses special characters to match text characters. For example, if you are filtering messages sent to you by two people, choose From in the first drop-down options list, then choose matches regexp. Then type their usernames between parentheses separated by a vertical slash, for example (bobclark) | (janedoe) in the text box. Eudora searches and displays all messages from these two people. For more information on regular expressions, refer to the readme.txt file in your Eudora folder or click on the following Web site URL http://sansecus.usc.es/unixpages/concepts_regex.html

matches regexp (Sponsored and Paid modes only)—If the specific item matches the regular expressions characters, filter those messages.

is greater than—If Junk Score is selected in the Header field, filter the message if the junk score is greater than the score you enter in the following field. For information about Junk scoring, see Junk Mail (Paid mode only) on page 359.

is less than—If Junk Score is selected in the Header field, filter the message if the junk score is less than the score you enter in the following field.

Enter text in the text field boxes to specify the text strings that the filter is searching for.

It is recommended that the contents of the text boxes be kept as specific and brief as possible. The greater the complexity, the less likelihood of a match.
Be sure not to enter a header label in the text box as part of the text string. For example, to filter all messages from Justine, do not enter “From: Justine” in the text box. Rather, select “From:” in the Header field, and enter simply “Justine” in the text box.

Use the conjunction drop-down menu (“ignore” is the default) to link the two terms. The conjunction options are as follows:

ignore—Ignore the second term. If the message matches the first term, filter the message.

and—If the message matches both the first and second terms (but not just one alone), filter it.

or—If the message matches either term (or both), filter it.

unless—If the message matches the first term, filter it unless the message also matches the second term, in which case do not filter it. (This lets you exclude certain variations of the first term.)

Filter Actions

For a filter you’re creating or modifying in the Filters window, all messages that match the filter criteria are acted on as specified with the Actions drop down menus. Each filter can do up to five things to a message that matches the criteria. You can use the same action twice if it does not directly affect the original message. For example, “Copy To” can be used twice, but not “Transfer To.”

Some filter actions have an associated icon. For these actions, Eudora places the action icon next to the filter in the filters list. Up to five icons can appear per filter.

The Action options are as follows:

None—No action.

Make Status—Assigns the selected status to message summaries.

Make Priority—Assigns the selected priority level to messages. If you select a set level from the drop-down menu, messages are set to that priority. If you select Raise or Lower, messages are raised or lowered one priority level based on their pre-filter level.

Make Label (Sponsored and Paid modes only)—Assigns the selected label to messages. Label colors and names are set in the Labels options window. See Labels on page 331.
Organizing Your Messages

**Make Personality** (Sponsored and Paid modes only)—Assigns the selected personality to messages. For outgoing messages, the message is not sent from the assigned personality. For incoming messages, all your responses to the message will be from the assigned personality until you change the personality associated with the incoming message or your response. For more information, see *Using Multiple Personalities (Sponsored and Paid modes only)* on page 115.

**Make Subject**—Assigns the new subject to message summaries (does not affect the subject in the message itself). If you choose this option, the entire subject of the message is replaced with the new subject. Use the “&” symbol to stand for the old subject if you want to add the new subject to the old subject. For example, entering New Subject [was &] results in New Subject [was Old Subject].

**Play Sound** (Sponsored and Paid modes only)—Plays the selected sound when messages are filtered.

**Speak** (Sponsored and Paid modes only)—Plays a voice to alert you of a message being filtered. *Who* and *Subject* fields display as well as a drop-down list where you can choose a voice type. Check *Who* to hear the voice read the sender’s name and *Subject* to hear the voice read the subject line.

**NOTE:** After you select Speak, the *Who* and *Subject* fields and a drop-down voice list appear. If these fields are grayed out, you must install Microsoft’s Speech Engine applications. For more information and to retrieve the applications, please refer to the following website: www.eudora.com/download/other

**Open** (Sponsored and Paid modes only)—Opens the mailbox and/or message when a message is received. If you set a previous action to filter messages into a mailbox, then that mailbox is opened.

**Print** (Sponsored and Paid modes only)—Prints one copy of each message.

**Notify User** (Sponsored and Paid modes only)—Notifies you “As Normal” and/or “In Report” when messages are received. The “As Normal” option notifies you based on the options you have selected in the Getting Attention options. The “In Report” option notifies you by opening the Filter Report window and displaying in that window a filter report that details what filter actions have been done. See *Filter Report Window* on page 220.
Organizing Your Messages

Notify Application—Notifies the selected application when messages are received, and provides information from the message. Specify the application to use and the part of the message to be included.

Use the Browse button to select an application, or enter the command line yourself. The command line should include the path to the executable, any options, and the following substitution variables, all separated by blank spaces:

%1 Date
%2 To
%3 From
%4 Subject
%5 Cc
%6 The entire message

For example, the command line to send the subject of a message to a pager might look like this:

C:\apps\pager.exe -c %4

Forward To (Sponsored and Paid modes only)—Forwards messages to the email address given. Forwarded messages are placed in the queue in the Out mailbox and sent the next time you send queued messages.

Redirect To (Sponsored and Paid modes only)—Redirects messages to the email address given. Redirected messages are placed in the queue in the Out mailbox and sent the next time you send queued messages.

Reply with—Replies to messages with the selected stationery message. Replies are placed in the queue in the Out mailbox and sent the next time you send queued messages. One typical use of this action is to reply to specific senders with stationery telling them that you’re on vacation: “I’m out till the 10th. I’ll reply to your message when I get back.” For more details, see Using Stationery (Sponsored and Paid modes only) on page 109.

NOTE: For filter actions Forward to, Redirect to, and Reply with, the resulting new message will always be queued regardless of your sending mail settings. If you want the message sent automatically, you need to have the Checking Mail settings set to “Automatically check mail every _ minutes” and “Send on check” enabled. See Checking Mail on page 295.
Organizing Your Messages

**Server Options** (Sponsored and Paid modes only)—Sets the message’s server status to Fetch and/or Delete. Use this only if POP is your incoming server type.

**Copy To**—Copies messages to the selected mailbox.

**Transfer To**—Transfers messages to the selected mailbox.

**Skip Rest**—Stops filtering for the message. The message is not matched to the rest of the filters in the filter list.

**Regular Expressions** (Sponsored and Paid modes only)

When searching for messages or defining a filter in Eudora, an option you can use is regular expressions. Following is a description of regular expressions and how they are used in Eudora.

There are two functions in Eudora where you can use regular expressions:

- **Filters window**—Located in the drop-down list where you indicate the relationship between a mail header and a piece of text (for example, the “Subject” contains Eudora, “Any Recipient” is joe@xyz.com, and so on). There are two regular expression criteria in that list, namely “matches RegEx” and “matches RegEx (case insensitive).”

- **Find Messages window**—Located in the center drop-down list. The option "matches regexp" appears. In the Find Messages window, regexp is not case sensitive.

There are various standard implementations of regular expressions, but Eudora uses the POSIX implementation. Following are symbols that are supported in Eudora.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Character representation</th>
</tr>
</thead>
<tbody>
<tr>
<td>.</td>
<td>(period) represents any one character.</td>
</tr>
<tr>
<td>[ ]</td>
<td>(brackets) contain a set of characters from which a match can be made. It corresponds to one character in the search string.</td>
</tr>
<tr>
<td>\</td>
<td>(backslash) is an escape character which means that the next character will not have a special meaning.</td>
</tr>
<tr>
<td>*</td>
<td>(asterisk) is a multiplier. It will match zero or more of the previous character. (Note that it's not a wildcard character as in file names.)</td>
</tr>
</tbody>
</table>
Here are a few examples:

<table>
<thead>
<tr>
<th>Symbols</th>
<th>What they match</th>
</tr>
</thead>
<tbody>
<tr>
<td>E.*a</td>
<td>matches Eudora, Etcetera, Ea</td>
</tr>
<tr>
<td>ho+p</td>
<td>matches hop, hoop, hooop, but not hp</td>
</tr>
<tr>
<td>etc\</td>
<td>matches etc. but not etc</td>
</tr>
<tr>
<td>e.a</td>
<td>matches eta, eda, e1a; it only matches Eta if the matching is case-insensitive</td>
</tr>
<tr>
<td>[eE].a</td>
<td>matches eta and Eta</td>
</tr>
</tbody>
</table>

You can find further information on regular expressions on the web, for example the following web site: [http://www.regular-expressions.info/](http://www.regular-expressions.info/).

Creating an Auto-Reply Message  
(Sponsored and Paid modes only)

You can create an email message that can be sent to people automatically when you are on vacation or away from your computer. This message is called an auto-reply. You create an auto-reply by using Eudora's stationery and filter functions.
Organizing Your Messages

Before you create the auto-reply, make sure that the *Check for mail every _ minutes* (the value you enter must be greater than 0) and *Send on check* options are turned on in the Checking Mail options window. See *Checking Mail* on page 295.

Also, make sure you have entered your incoming mail server’s password for your current session or have Eudora save your password.

**To create an auto-reply**

1. Write your auto-reply message using Eudora’s *Stationery* functions. Once the auto-reply message is written, name and save it in stationery. See *Creating New Stationery* on page 111.

2. From the Tools menu, choose *Filters*.

   *The Filters window appears.*

3. In the Match section, choose a header from the Header drop-down list. Select a header that matches the header in the messages to whom you want to send your auto-reply. <<Any Recipient>> is the most common for an auto-reply.

   **NOTE:** If you choose <<Any Recipient>>, all recipients including mailing list you subscribe to will receive your auto-reply.

   For example, to set an auto-reply only to messages sent to your user name, just select <<Any Recipient>>, then choose “contains.” In the text box, enter your user name. You can match others as well, but it may cause a large number of emails to be auto-replied.

4. In the Action section, choose *Reply with* in the first drop-down list.

5. In the text box to the right of the first drop-down list, enter the name of the stationery.

6. Click *OK*.

   *The stationery message you created will be sent to the people you indicated in this filter.*

   **TIP:** Remember to delete this filter when you want your auto-reply message to stop.
Using the Junk Mail Filter for Incoming Messages
(Paid mode only)

Once you install Eudora, Eudora asks you if you want to install a new mailbox called Junk to hold junk email messages (spam). The Junk mailbox appears in your mailbox list. The Junk mailbox is a special mailbox like the In, Out, and Trash mailboxes. It cannot be deleted or renamed.

sample Junk mailbox

When you check for mail, Eudora recognizes which incoming messages are junk, and those messages are filtered into the Junk mailbox. Your incoming mail goes through the Junk filter before any other filter you may have set up. After a certain number of days (30 days is the default), Eudora automatically deletes these messages.

Occasionally, messages Eudora filters into the Junk mailbox may, in fact, not be junk mail. There is a new option on the Message menu that allows you to transfer wanted mail to the appropriate mailboxes.

To manage messages in the Junk mailbox that are not junk

1. Scan the messages in the Junk mailbox and select those that you consider not junk mail.

2. From the Message menu, choose Not Junk. Or right-click on the message and choose Not Junk from the context menu.
Organizing Your Messages

Message menu with Not Junk option selected

By choosing the Not Junk command, the messages you selected are automatically filtered to go to the designated mailboxes you have previously set up.

NOTE: With time, Eudora learns which messages are not junk and filters them to your designated mailboxes automatically.

Conversely, if you find Junk mail in your other mailboxes, just choose Junk from the Message menu, and these messages are transferred to the Junk mailbox. With time, Eudora eventually learns to recognize these messages as junk and filters them into the Junk mailbox.

Sorting Messages Within Mailboxes

When you check your mail and new messages come into your In box or are filtered into other mailboxes, the new messages are placed in their mailboxes in the order in which they arrive. By default, these new messages appear at the bottom of the message summary list in the mailbox window. Note that this is not necessarily a strict date order, since occasionally messages may arrive out of date order. (The date indicates when the message was sent, not when you receive them.)
Similarly, when you transfer messages to another mailbox, those messages appear at the bottom of the message summary list in that mailbox.

You can sort messages in a mailbox by status, priority, attachment, label, sender, date, size, server status, subject, and group by subject. You can sort these messages in either ascending or descending order one column at a time or by combining several columns in the sort.

Simple Sorting

You can access Eudora’s sort feature to perform a simple sort in three ways:

- By clicking the column header you want to sort. For example, if you click the Who column, senders of your messages are sorted in alphabetically order.

- By right-clicking anywhere on the column headings. The context menu appears for you to choose a sort criteria for that column. For example, if you choose the item to sort in descending order, the mailbox sorts from top to bottom.

- By choosing the Sort from the Edit menu. The Sort submenu appears for you to choose a column heading to sort.

**NOTE:** The normal sort order is ascending, for example, with the most current dates at the bottom of the list. If you hold down the Shift key and click the column header, the sorting becomes descending. You can mix ascending and descending sorts when sorting more than one column at a time.

Following is the context menu that appears when you right-click the Who column heading.

*Mailbox sorting context menu*

<table>
<thead>
<tr>
<th>Sort by Sender</th>
<th>None</th>
<th>Ascending</th>
<th>Descending</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group by Subject</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

In each column heading, you can choose if that heading has no sort, is sorted in ascending order, or sorted in descending order. Also, you can group subjects together by choosing **Group by Subject**, which keeps messages with the same subject together all the time.

Messages (including replies) with the same subject, such as a work project are kept together in the mailbox regardless of whether you sort by Date, Sender, and so on. A checkmark next to the Group by Subject option in the context menu indicates that the option is active.
Organizing Your Messages

New messages that come into a sorted mailbox will automatically be placed in the correct sorted order. For example, if you have a mailbox sorted by date, and you want all of the messages to be grouped by subject, any new messages will be grouped with other messages containing the same subject in a chronological.

**NOTE:** You can also sort message in the Find Messages window when the Results panel is active.

Complex Sorting

You can perform complex sorting by holding down the Ctrl key and click one column, then another column, and so on. The columns are sorted in the order you clicked on them. For example, if you click the Subject column first and then the Date column, the subjects in this mailbox sort alphabetically and then chronologically. You will notice numbers in each column header indicating the order of the sort. See the following example.

**Complex sorting by subject and then date**

<table>
<thead>
<tr>
<th>Date</th>
<th></th>
<th></th>
<th>Subject</th>
</tr>
</thead>
<tbody>
<tr>
<td>08:55 AM 11/12/1999 - 05</td>
<td></td>
<td></td>
<td>Re: Paid -&gt; Adw</td>
</tr>
<tr>
<td>04:31 PM 1/19/2000 - 01</td>
<td></td>
<td></td>
<td>PDF distiller</td>
</tr>
<tr>
<td>10:37 AM 1/18/2000 - 02</td>
<td></td>
<td></td>
<td>Please donate y</td>
</tr>
<tr>
<td>12:31 PM 10/19/1999 - 02</td>
<td></td>
<td></td>
<td>Please join the E</td>
</tr>
<tr>
<td>01:29 PM 7/6/1999 -05</td>
<td></td>
<td></td>
<td>Please join the E</td>
</tr>
<tr>
<td>02:23 PM 10/25/1999 - 08</td>
<td></td>
<td></td>
<td>Prize Donations</td>
</tr>
<tr>
<td>11:02 AM 1/26/2000 - 03</td>
<td></td>
<td></td>
<td>Proofs for the 80</td>
</tr>
<tr>
<td>03:53 PM 7/12/1999 -04</td>
<td></td>
<td></td>
<td>Property Passes</td>
</tr>
</tbody>
</table>

To perform a complex sort, you can click two columns or all eight! To cancel the sort, just click on the column that displays 1. All the sort criteria will cancel.

Using the Find Command

Eudora incorporates a Find command that searches for specific text within a single message, multiple messages, or even multiple mailboxes.

**To display the Find submenu of commands**

- From the Edit menu, choose **Find**.
Finding Text Within One Message

To search for text within a single message

1. Open a message.

2. From the Edit menu, choose Find or in an open message or in the preview pane, press Ctrl + Shift + F.

3. From the Find submenu, choose Find Text.

   The Find dialog box appears, with the blinking insertion point located in the text field.

4. In the text field, type the text you want to find.

5. Check Match whole word only to match the text as whole word (not embedded in another word). Check Match case to match the case of the entered text.

6. When finished, click the Find Next button.

7. To continue searching in the same message for the next occurrence of the text, click the Find Next button in the Find dialog box, or choose the Find Text Again command from the Find submenu.

   These commands are equivalent and limit the search to the same message. Repeating these commands cycles through the matches in the open message only.

Starting at the cursor’s current position in the message, Eudora searches the current message for the specified text. If no match is found, the not found alert appears.
If the search is successful, the message is scrolled to the first point where the match is found and the matching text is highlighted.

**NOTE:** You can search for text in the messages summaries area of a mailbox. Just place your cursor in the summaries window and choose **Find** from the Edit window. Choose **Find Text** and enter the text you want to find in the Find Text dialog box. Eudora will highlight the first occurrence of the text.

**Stopping a Find**

If you want to stop Eudora from continuing a search, click the Stop button in the progress window, or press the Esc key.

**Find Messages**

**NOTE:** If you are using Eudora in Sponsored or Light mode, you have access to fewer features when using Eudora’s Search functionality.

You can perform complex searches through messages in all or a selected number of mailboxes or folders. Once your search is complete, you can sort, delete, and view the resulting messages. You can search for a specific piece of information in all your mail or just search for a particular item that matches the criteria you set. Set up the criteria for your search by selecting options from the drop-down lists and by entering text.

**To set up criteria for a message search**

1. From the Edit menu, choose **Find** or press Ctrl+F.
   
   *The Find submenu appears.*

2. From the Find submenu, choose **Find Messages**.
   
   *The Find Messages dialog box appears.*
In the Find Messages dialog box, your mailboxes appear along with check boxes. If the boxes are checked, Eudora will perform a search in these mailboxes according to the criteria you are about to set up. To omit a mailbox from the search, just un-check the box. If you had a mailbox selected when opening the Find Messages dialog, Eudora will default to only that mailbox being checked. Otherwise, all mailboxes are checked by default.

If you right-click in the Find Messages window, a context menu appears allowing you to clear all the check marks so you can select the mailboxes to search. Choose Clear All to clear the check marks or choose Check All to check all the mailboxes.

The top part of the dialog box is where you select and enter criteria for your search. Each search can use up to five “terms” and “verbs” as its criteria, connecting them as appropriate. Eudora remembers the previous criteria if you close and reopen the Find Messages dialog box. The drop-down and verb lists displaying the criteria you can select are shown below:
3. In the drop-down criteria list (Anywhere is the default), choose where in the message you want Eudora to search for text. Following is a description of each option.

Anywhere—Choose this option to search everywhere in the message including all header fields and message body. This includes headers that are normally exposed only with the Blah Blah Blah icon button turned on.

Headers—Choose this option to search only in the header fields of the message. This includes headers that are normally exposed only with the Blah Blah Blah icon button turned on.

Body—Choose this option to search only in the body of the message.

Attachment Name(s)—Choose this option to search only attachment names in the message.

Summary—Choose this option to search text entered in only the header From: and Subject: fields of the message.
Organizing Your Messages

**Status**—Choose this option to search for messages by status. A status drop-down options list displays (the default is Unread). You can choose from Unread, Read, Replied, Forwarded, Redirected, Sent, Sendable, Unsent, Queued, Time-Queued, Unsendable, or Recovered. The verb field defaults to *is*.

**Priority**—Choose this option to search for messages by priority. A priority drop-down options list displays (the default is Highest). You can choose from Highest, High, Normal, Low, or Lowest. The verb field defaults to *is*.

**Attachment Count**—Choose this option to search the number of attachments joined to each message. A counter appears for you to select the desired number, or you can type the number in the text box. The verb field defaults to *is*.

**Label**—Choose this option to search for messages by label. Choose Label, and the labels drop-down options list displays (the default is None). You can choose from the labels you previously set up. The verb field defaults to *is*.

**Date**—Choose this option to search for messages by date. Once selected, today’s date appears. Click the down arrow to display the current month’s calendar. Using the arrows on the calendar, you can display the preceding or succeeding months and years. Choose the date to or from where you want the search to begin.

**Size**—Choose this option to search for messages by their file size (in kilobytes). A counter appears for you to select the desired number of kilobytes, or you can type the number in the text box. The verb field defaults to *is*.

**Age**—Choose this option to search for messages by age (in days). A counter appears for you to select the desired number of days, or you can type the number in the text box. The verb field defaults to *is*.

**Personality**—Choose this option to search for messages by account. A drop-down list displaying your previously set up personalities appears. Select the desired personality.

**Mailbox Name**—Choose this option to search for messages in a specific mailbox. Enter the name of the mailbox in the text box. This works well if you selected several mailboxes but only wanted certain mailboxes that matched the criteria you selected.

**To**—Choose this option to search text entered in only the To: header field of the message.

**From**—Choose this option to search text entered in only the From: header field of the message.
Organizing Your Messages

**Subject**—Choose this option to search text entered in only the Subject: header field of the message.

**CC**—Choose this option to search text entered in only the Cc: header field of the message.

**BCC**—Choose this option to search text entered in only the Bcc: header field of the message.

**Any recipient**—Choose this option to search text entered in only the To:, Cc:, and Bcc: header fields of the message.

In the example below, Headers was selected from the drop-down options list as the first criteria.

4. After you select the option from the drop-down list, select a verb to link the first option with the text you want to find. The verb drop-down lists are shown below:

**Verb drop-down lists**

Following is a description of each verb option in the drop-down list.

**contains**—If the specific item contains the text string, search and display those messages. This allows for other text to the right of the text string.

**contains whole word**—If the specific item contains the exact word, search and display those messages. This does not allow for other surrounding text.

**does not contain**—If the specific item does not contain the text string, search and display those messages.
matches x1 query—If the specific items matches the x1 formatted query string, search and display those messages. This allows for complex queries to be performed within a single search criterion. For details on x1 query syntax, please see X1 Search Queries on page 436.

NOTE: The following options are available only when Indexed Search is turned off:

Verb drop-down lists

is—If the specific item is an exact match, search and display those messages.

is not—If the specific item is not an exact match, search and display those messages.

starts with—If the specific item starts with the text string, search and display those messages.

ends with—If the specific item ends with the text string, search and display those messages.

matches regexp (case insensitive)—If the specific item matches the regular expressions characters with case insensitivity, search and display those messages.
Organizing Your Messages

Regular Expression is a search string that uses special characters to match text characters. For example, if you are searching for messages sent to you by two people, choose From in the first drop-down options list, then choose matches regexp, then type their usernames between brackets separated by a vertical pipe symbol, for example (bobclark) | (janedoe) in the text box. Eudora searches and displays all messages from these two people. For more information concerning regular expressions, refer to the readme.txt file in the Eudora folder, or go to the following URL: http://www.regular-expressions.info/

**NOTE:** Regular Expressions is an advanced and complex method of searching for text.

**matches regexp**—If the specific item matches the regular expression string of characters, search and display those messages.

**is after/is before** (Date only)—If the date is after or before the date displayed, search and display those messages.

**is greater than/is less than** (Age, Size, Priority, Attachment Count only)—If the specific item is greater than or less than the number indicated, search and display those messages.

5. Once you have chosen the verb, enter the text string that you are searching for, or choose a value from the drop down list if one appears. In the text box, you can enter as much text as you want. In the following example, a username was entered.
Example of search criteria for a one-level search

In the above example, if you click **Search**, Eudora will search through all of your mailboxes for every message that contain the text *Ron* anywhere in the header portion of the message.

6. To continue adding a second level of criteria (you can add up to five levels), click **More**. Choose and enter more criteria to further streamline the search as in the following example. You can also select **Match All** or **Match Any** to include or differentiate the criteria from one level to the other. “Match All” will find messages that match all of the criteria you entered; “Match Any” will find messages that match any of the criteria you entered.
Example of search criteria for a two-level search

In the above example, if you click **Search**, Eudora will search for every message through every selected mailbox that contains the word *speaker* anywhere but only if the text *Ron* is somewhere in the header.

7. To continue adding a third level of criteria, click **More**. Choose and enter more criteria to further reduce the search. Click **Search** to display the messages that contain the criteria you entered. Although the following example shows three levels of criteria, you can click **More** to continue entering more criteria; click **Fewer** to return one level back. The Search button is disabled if you have a blank text box.
Example of search criteria for a three-level search with results

In the above example, if you click **Search**, Eudora will search for every message through every mailbox that contains the word *message* in the message body, the text *Ron* somewhere in the headers, and the word *speaker* anywhere in either the message headers or the body.

To select all the messages in the Results window, choose **Select All** from the **Edit** menu or press Ctrl + A.

The messages that fulfill the search criteria appear in the Results window.

The Search feature will not work if you have any text boxes blank. You can click **Fewer** to reach a level where all text boxes are filled to conduct your search.
To sort the messages, click a column heading to sort by that column. To sort in descending order, click the column header again.

To open a message, select and double-click the message, or right-click to display the context menu. Choose **Open Message**.

To open the mailbox where this message resides, highlight the message, right-click to display the context menu. Choose **Open Mailbox**.

To transfer the message to another mailbox, highlight the message, right-click to display the context menu. Choose **Transfer** and then select the mailbox you want.

To reply to the message, highlight the message, right-click to display the context menu. Choose **Reply**.

To reply to everyone on the message, highlight the message, right-click to display the context menu. Choose **Reply to All**.

To forward the message to someone else, highlight the message, right-click to display the context menu. Choose **Forward**.

To redirect the message to someone else, highlight the message, right-click to display the context menu. Choose **Redirect**.

To delete a message, highlight the message and press the Delete key, or right-click to display the context menu. Choose **Delete**.
Using Web Words

Web Words provide you with two easy ways to access search engines:

- Clicking a word or words in your email to activate a contextual search
- Typing your search query in your toolbar.

You can now highlight a word or words anywhere in a message (header or text) and search the Internet for that topic. For example, you can highlight the word "flowers" anywhere in the message and search the Internet for all topics relating to flowers.

Or you can type your search query in your toolbar and search the Internet for that topic.

**To search using the toolbar**

1. Click in the Search text field on your toolbar.

   *Toolbar Search Field*

   ![](Toolbar_Search_Field.png)

2. Type the text that you wish to search the Internet for.

   *The text that you type appears in the Search Web field.*

   *Toolbar Search Field*

   ![](Toolbar_Search_Field_with_text.png)

3. Press the **Return** key.

   *Eudora launches your web browser and initiates a search for the topic.*

**To search using a drop-down menu**

1. Highlight a word or words in an email.

2. Right-click the word.
Organizing Your Messages

A contextual submenu appears showing the option to Search for your topic.

Web Words submenu

3. Choose one of the search options:

- **Search Web** - Eudora launches your web browser and initiates a search for the highlighted text.

- **Search Eudora** - Eudora searches all your mailboxes for the text you entered in the search field.

- **Search Mailbox** - If you have a mailbox opened, Eudora searches that mailbox for the text. If you have a message opened, Eudora searches the mailbox that the message is in.

- **Search Mailfolder** - If you have a mailbox opened, Eudora searches all the mailboxes in the same mail folder as the open mailbox.

**TIP:** If you want to search on a single word only, you do not have to highlight the word. Simply press the Control key and click or right-click on the word to start a search.
Searching in Eudora

The search field on your toolbar can also be used to search inside Eudora. Type the words you wish to search for, then click on the arrow to the right of the field.

_A submenu appears with further search options._

**Submenu**

Choose one of the following search options:

- **Search Web** (default) - Eudora launches your web browser and initiates a search for the text you entered in the search field.

- **Search Eudora** - If you have an item open in Eudora (such as a mailbox or an email), Eudora searches it for any text you entered in the search field. If you do not have anything highlighted, it searches all your mailboxes in Eudora.

The submenu also displays your most recent searches at the top of the search menu.

**Recent Searches**
Organizing Your Messages

Saving a Message to a File

To save a message to a separate text file on your computer

1. Open or select the messages you want to save.

2. From the File menu, choose **Save As**.

   *The Save As dialog box appears.*

   **Save As dialog box**

3. Enter the name you want to give the text file and select the appropriate options.

4. In the Save as type drop-down menu, choose **Text Files**.

   When selected, Include Headers retains the first message’s header information in the saved document. If this is not checked, only the body of the messages is saved.

   When selected, Guess Paragraphs removes extraneous carriage returns from the message and leaves returns only at the ends of paragraphs. It also converts multiple spaces into tabs.

5. Once you’ve made all of your choices, click **Save**.

   If you select multiple messages from a mailbox window and choose **Save As**, all of the messages are saved to a single file.
Managing Windows in Eudora

Window States and Tabbed Windows

Every window in Eudora exists in one of three states.

- Normal
- Docked
- Floating

You can use these different window states to set up Eudora the way you want to see it on your screen. These states are described below and in the following sections.

A *tabbed window* is a collection of windows combined into a single window in which each window has its own tab, for activating and dragging. A tabbed window can exist in any of the above three window states: normal, docked, or floating. Tabbed windows are discussed separately below.

**NOTE:** Only *tool windows*, those windows accessible from the Tools menu, except the Options dialog box, can exist as docked windows, floating windows, and tabbed windows. All other windows in Eudora, particularly the mailbox TOC windows and message windows, exist only in the normal state and *cannot* be combined into tabbed windows.

The tool windows that can be docked, floating, or tabbed are as follows, in their order down the Tools menu.

- Filters
- Filter Report
- Mailboxes
- File Browser
- Stationery
NOTE: If you minimize and then restore the main Eudora window, then all normal, docked, and floating Eudora windows, including tabbed windows, are also minimized and restored with it.

Closing a tool window does not erase its contents, unless the contents are saveable and you choose to discard changes. When you close a tool window or a tabbed window, the content, state, and position of the window or of all windows in the tabbed window are preserved. The preservation of content is useful for “persistent data” such as filter reports and directory service queries. If you try to close or de-activate a tool or tabbed window with unsaved changes, Eudora asks if you want to save the changes.

NOTE: If you are using Eudora in Sponsored mode, an ad window appears at the left-hand bottom of your screen. The ad window is the minimum size that corresponds to the ad being displayed, and this window can be moved.

Normal Windows

A window is in the *normal* state if it is restricted to the window work area of the main Eudora window and cannot be dragged out of the main window.
Normal windows can be moved around within the window work area. They can also be minimized, and can be maximized to completely fill the visible window work area. When a normal window is maximized, its title bar partially blends with the main window title bar.

Normal windows can overlap other normal windows and are obscured by both docked and floating windows.

The title bar of a normal window contains the window-menu icon (far left) and three standard window buttons (far right): minimize/restore, maximize/restore, and close.

A tool window in the normal state, whether alone or in a tabbed group, can be dragged out of the confines of the main Eudora window, but it must first be converted to a dockable or floating window.
To convert a normal window to a docked or floating window

1. To display the drop-down context menu, right-click the window’s border or tab.

2. To turn the command off, from the context menu choose **Float In Main Window**.
   
   *The checkmark disappears.*

3. To turn the command on, from the context menu choose **Allow Docking**.
   
   *A check mark appears.*

A non-tool window in the normal state, such as a mailbox window or a message window, can never be dragged out of the confines of the main Eudora window.

To convert a docked or floating window to a normal window, right-click the docked or floating window’s border or tab, and choose **Float In Main Window** from the drop-down context menu.

Docked Windows

A window is *dockable* if it is capable of being attached to one of the four edges of the main Eudora window. A window is said to be in the *docked* state if it is currently attached to one such edge.
NOTE: Some application programs identify the docking feature by using terms such as “gravity,” “snap,” “glue,” “sticky,” “join,” and the like.

Only tool windows, whether alone or tabbed, are dockable. All other windows in Eudora, particularly message windows and mailbox windows, are not dockable.

NOTE: The main toolbar, although not a window, is also dockable to any edge of the main Eudora window or to another dockable window.

Dockable windows can be docked to any edge of the main Eudora window and to each other. You can also dock multiple windows along a single edge of the main window.

When you dock a window to the main window, the visible window work area is reduced.Docked windows cannot be obscured by normal windows, but they can be obscured by floating windows.
To make a window dockable

1. To display the drop-down context menu, right-click the window’s border or tab.

2. To turn off the command, from the context menu choose **Float In Main Window**.
   The check mark disappears.

3. To turn on the command, choose **Allow Docking**.
   A check mark appears.

4. To then dock the window, drag the window to an edge of the main Eudora window or to another docked window. When the ghosted docking rectangle appears, indicating that the window will be docked, release the mouse button. The window attaches to the main window edge or the other window.

Some windows are more convenient to use when docked vertically (tall-and-narrow), while others are more convenient to use when docked horizontally (short-and-wide). Examples of windows that work better as tall-and-narrow windows are the Mailboxes window and the File Browser window. Examples of windows that work better as short-and-wide windows are the Task Status window and the Filter Report window.

Following are descriptions of the controls in docked windows.

**Gripper Bar**

The **gripper bar**, also called the **grab handle**, is the double line at one edge of the docked window. Drag the window by the gripper bar to undock it from the main window frame. The window now floats; you can leave it as a floating window, or you can dock it to any edge of the main window or to another docked window.

**NOTE:** The toolbar has a gripper bar.

**Zoom Button**

When two or more windows are docked on the same edge of the main window, Eudora activates each window’s **zoom button**. This button appears next to the “x” close button and contains a small triangle. Click the zoom button to minimize, maximize, or restore the width or height of that docked window relative to the other docked windows adjacent to it.
Close Button

The close button contains an “x” and appears next to the zoom button. Click the close button to close the docked window.

Resize Bar

When two windows are docked side by side along one edge of the main window, a bar appears between them, called the resize bar. Drag this bar up or down, or to the left or right, as appropriate, to enlarge one of the docked windows and reduce the other.

Floating Windows

A window is in the floating state if it floats above the main Eudora window and can be placed anywhere on the desktop, including outside the main Eudora window. In this way, a floating window is a standard Windows Always on Top window, like tool palettes in paint programs.

Sample floating windows
Only tool windows, whether alone or tabbed, can be made to float. All other windows in Eudora, particularly message windows and mailbox windows, cannot be made to float.

**NOTE:** The main toolbar, although not a window, can be made to float by undocking it from the main Eudora window using the gripper bar.

All windows in Eudora can be thought of as “living” in one of three layers or areas.

- Normal windows live in the window work area, the bottom layer.
- Docked windows live at the level of the main Eudora window’s border, the middle layer.
- Floating windows live at the level above the main Eudora window, the top layer.

Floating windows live at the level above the main Eudora window, the top layer.

Therefore, a floating Eudora window floats above all other Eudora windows except other floating windows.

The title bar of a floating window contains, in addition to the title, only the Close button. This distinguishes the window from a normal window when both appear to be in the window work area. A normal window’s title bar contains the window-menu icon and three standard buttons. Note that a floating window can be dragged outside of the main Eudora window, whereas a normal window cannot.

You can diagonally resize any floating window in Eudora. Simply position the pointer over any window corner, and click and drag to enlarge or reduce.

**To convert a window to a floating window, either undock it from the main window, if it is docked**

1. To display the drop-down context menu, right-click the window’s border or tab.
2. To turn off the command, from the context menu choose **Float In Main Window**. The checkmark disappears.
3. Then choose **Allow Docking** to turn off the command. The checkmark disappears. For a docked window, you can also temporarily override the Allow Docking command and suspend docking by holding down the Ctrl key while dragging the window. The window drags as a floating window.
Tabbed Windows

A tabbed window is a collection of tool windows combined into one window. Each tool window in the tabbed window has its own window tab.

Sample tabbed windows

A window tab has two purposes:

- It lets you bring the window to the front of the group to display it by clicking on the tab.

It serves as a “drag handle” that lets you drag the tool window from one tabbed window to another, so that you can reorganize your tabbed windows and create new tabbed windows.

Only tool windows, those windows accessible from the Tools menu, except the Options dialog box, can be combined into a tabbed window. All other windows in Eudora, particularly mailbox windows and message windows, cannot be combined into a tabbed window.

A tabbed window can be normal, docked, or floating. You can convert a tabbed window from any state to any other state.

If a tabbed window shows a title bar, the title in the bar is the name of the active window in the group.
Eudora’s Default Tabbed Windows

Eudora comes with three default tabbed windows, shown in the previous figure, which together include all eleven tool windows.

The first default is a vertically oriented tabbed window that is docked to the left side of the main window and contains the following five tool windows, with tabs in left-to-right order.

- Mailboxes
- File Browser
- Stationery
- Signatures
- Personalities

The second default tabbed window is a normal window that contains these five tool windows, with tabs in left-to-right order. To display this window, choose one of the member windows from the Tools menu.

- Directory Services
- Address Book
- Filters
- Filter Report
- Link History

The third default tabbed window is a docked window that contains two tool windows, with tabs on the left side in top-to-bottom order. To display this window, display one of the member windows from the Tools menu.

- Task Status
- Task Errors

**NOTE:** The far-left window is the default window that will appear. To change this default window, select the window you want to appear as the default, and drag it to the far-left tabbed window grouping. See Reorganizing Tabbed Windows on page 207 for more information.
As described later in this section, you can reorganize these default tabbed windows any way you like. Your newly arranged tabbed window will be preserved when you quit and restart Eudora.

NOTE: Due to file format incompatibilities, if you upgrade from a pre-4.0 version of Eudora, you will lose the previous docking state of your Mailboxes window and toolbar. Eudora will reset the toolbar and docking states to the default configuration noted above. However, customized toolbar information is preserved; only the size and location of your toolbar may change.

Opening and Activating Tabbed Windows

To open a tabbed window that’s hidden, open any of its member windows by selecting the appropriate command from the Tools menu. The tabbed window opens with the selected window as the active (frontmost) window.

If the tabbed window is already visible and you wish to display one of its member windows that is currently not active, simply click the member window’s tab. You can also select the appropriate item from the Tools menu. The desired window comes to the front of the tabbed group.

You can also use the tool window’s keyboard shortcut, if it has one, to open or activate the tool window in its tabbed window.

Reorganizing Tabbed Windows

You are not restricted to the default tabbed window arrangements supplied with Eudora. You can mix and match tabbed windows any way you like.

At one extreme, you can have each of the tool windows in its own container with its own tab. At the other extreme, you can have all tool windows combined into one tabbed window. In between, you can have multiple tabbed windows open at once, mixed and matched to suit your purposes.

To move a window from one tabbed group to another, drag the window tab from the first group and drop it onto the second.

While the drag operation is in progress, the cursor changes and Eudora displays a small ghosted rectangle when you are over a valid drop location.
If you drop the window tab onto another tab in the second group, the new window tab is inserted at that position and the other tabs are displaced to accommodate it. If you don’t drop the tab onto an existing tab, Eudora adds the new tab at the “end” of the group of existing tabs. The end depends on the location of the tabs in the tabbed window: top, bottom (the default), left, or right. For example, with tabs along the bottom, the “end” is the far right.

Note that the relocated window takes on the window state — normal, docked, or floating — of the destination tabbed window.

To reorganize the left-to-right or top-to-bottom order of tabs within a tabbed window, just drag the tabs left and right or top and bottom. The drop scheme is the same as that described above.

Creating a New Tabbed Window

To create a new tabbed window, drag one of the tabs from an existing tabbed window and drop it onto an exposed portion of the window work area. If the window work area is completely obscured — a normal window is maximized, for example — then drop the tab onto the status bar.

The dropped window converts into a normal tabbed window with a single tab.

To convert the window to docked or floating

1. To display the drop-down context menu, right-click the tab or the window border

2. To turn off the command, from the context menu choose **Float In Main Window**. The check mark disappears.

3. To turn on the command, choose **Allow Docking**.

   *The check mark appears.*

4. While dragging the floating or docked window, you can hold down the Ctrl key to temporarily suspend docking behavior. When you release the key, docking behavior resumes.

Tab Display in Single-Tabbed Windows

If a tool window is in a tabbed window by itself, with one tab, you can hide or show the tab.
To hide or show the tab

1. To display the context menu, right-click the tab or the window border.
2. From the Tab Location submenu, choose Show Single Tab.

**NOTE:** You cannot hide the tabs in a tabbed window with two or more tabs.

Tab Contents, Location, Auto-Activation

- **Tab Contents**—A window tab contains both the icon and the text label associated with that window. If there is room enough in the tabbed window, both the icon and the label appear on each tab. If there is not enough room, only the icon appears for each tab. If only the icon is visible, pause the mouse pointer over the tab icon and Eudora will display the tab text in a Tooltip.

- **Tab Location**—By default, Eudora arranges window tabs along the bottom edge of a tabbed window. Sometimes, however, it is more convenient to have the tabs appear along a different edge. For example, in a short-and-wide tabbed window (one that is docked horizontally), you can improve the visibility of the window’s contents by moving the tabs to the left edge. To change the location of the tabs in a tabbed window, right-click one of the tabs or on the window border, and choose a new location from the Tab Location submenu of the context menu.

- **Tab Auto-Activation**—During a drag and drop operation, if you pause the mouse pointer over the tab of an inactive window in a tabbed window, that window becomes active (is brought to the front), and you can complete the drop. For example, if you drag received messages to the Mailboxes window when it is inactive in a tabbed window, and pause the pointer over the Mailboxes window’s tab, the window becomes active and you can drop the messages in a mailbox. Note that tab auto-activation is disabled when you are dragging a tool window tab.

Closing Tabbed Windows

To close a tabbed window, click the “x” close button in the upper-right corner of the window.

Alternately, right-click any tab in the window or on the window border, and choose Hide from the drop-down context menu.
Managing Windows in Eudora

Note that when you close or hide a tabbed window, the contents of all member windows, and the state and position of the tabbed window, are all preserved. When you redisplay the tabbed window, the active window shows its prior contents and the tabbed window appears in its prior state and position.

However, if you attempt to close or hide a tabbed window in which the active window contains unsaved changes, or you attempt to deactivate that active window by making another window active in the group, Eudora asks you if you want to save your changes.

Window Context Menu

If you right-click the tab or border of a single tool window, or on any tab or the border of a tabbed window, Eudora displays a context menu containing window-management commands.

Window context menu

<table>
<thead>
<tr>
<th>Tab Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allow Docking</td>
</tr>
<tr>
<td>Hide</td>
</tr>
<tr>
<td>Float in Main Window</td>
</tr>
</tbody>
</table>

Tab Location

This submenu is always available on the window context menu. It lets you change the location of the tabs in a tabbed window and lets you show and hide the tab in a single-tabbed window.

By default, Eudora places window tabs at the bottom of a tabbed window. Choose Top, Bottom, Left, or Right from this submenu to move the tabs to the top of the tabbed window, the bottom, or the left or right side. Eudora places a bullet (radio button) next to the current tab location selection.

Changing tab locations can sometimes increase the visible space within a tabbed window. For example, a short-and-wide tabbed window (one docked horizontally) might show more content if you move the tabs to the left side.

“Show Single Tab” is available in a single-tabbed window and lets you show or hide the tab. A checkmark next to the command indicates that the tab is shown (the default). This command is not available in a tabbed window containing two or more tabs; you cannot hide the tabs in such a window.
Allow Docking

This command controls the dockability of floating and docked windows. It is available only when the “Float In Main Window” command is deselected. It is not available for normal windows when “Float In Main Window” is selected.

A checkmark next to the command indicates that it is selected.

When this command is on for a docked or floating window, the window can be docked to any edge of the main Eudora window.

When “Allow Docking” is deselected for a docked window, the window is converted to a floating window and cannot be redocked. When the command is turned off for a floating window, the window cannot be docked.

Even with “Allow Docking” selected, you can hold down the Ctrl key while dragging a docked or floating window to suspend dockability until you release the key.

Hide (command)

This command is always available on the context menu.

Choose Hide to close the tool window or tabbed window. “Hide” performs the same function as the “Close” command (Ctrl+F4) on the standard MS Windows window context menu.

Note, however, that when you hide or close a tool window, its content, state, and position are all preserved. And when you hide or close a tabbed window, the content, state, and position of all member windows are preserved. Thus, if you hide and redisplay a floating tabbed window, the window floats in its same position.

If you attempt to hide or close a tool window that contains unsaved changes, or a tabbed window in which the active window contains unsaved changes, Eudora asks if you want to save your changes.

To redisplay a tool window after you’ve hidden it, choose it from the Tools menu. To redisplay a tabbed window after you’ve hidden it, choose one of its member windows from the Tools menu. The tabbed window redisplays with the selected window active. You can use keyboard shortcuts to reappears hidden tool or tabbed windows where appropriate.
Float In Main Window

This command is always available on the drop-down context menu.

Selecting this command (indicated by a checkmark next to the command) converts a docked or floating window to a normal window. Deselecting this command converts a normal window to a docked or floating window.

Note that the availability of the “Allow Docking” command depends on the state of this command. “When Float In Main Window” is selected (checked), “Allow Docking” is unavailable (the window is normal). When “Float In Main Window” is deselected, “Allow Docking” is available.

Eudora Toolbar

The main toolbar is a strip of buttons that gives you easy access to your frequently used Eudora commands.

The toolbar can be moved to wherever you want it on the screen. Just hold down the left mouse button on the gripper bar, which is the double-line at one end, and drag the toolbar around until you find a place you like. You can dock it to any edge of the Eudora window (left, right, top, or bottom), or you can dock it to another dockable window, or you can put it anywhere on your desktop in the floating state.

The descriptions of the default icons are listed below.

- Trash
- Opens In box.
- Opens Out box.
Checks for mail.
See Checking for Mail Manually on page 74.

Creates new message.
See Creating an Outgoing Message on page 32.

Replies to sender's message.
See Replying to a Message on page 96.

Replies to all recipients of the message including the sender.
See Replying to a Message on page 96.

Forwards the message.
See Forwarding a Message on page 98.

Redirects the message. See Redirecting a Message on page 98.

Opens next message.

Opens previous message.

Attaches a file to the message.
See Attaching a File to a Message on page 49.

Checks spelling.
See Checking Your Spelling Automatically (Sponsored and Paid modes only) on page 55.

Open the Find Messages window. See Find Messages on page 181.

Opens address book.
See Using the Address Book on page 233.

Sends the message to the printer.

Activates context sensitive help.
Viewing the Main Toolbar

To show or hide the main toolbar, select or deselect the *Show toolbar* option in the Display options window. See *Display* on page 315.

If the “Show cool bars” option is selected in the Display options window, the toolbar buttons have a flat look, and a button appears raised only when you position the mouse pointer over it. If this option is deselected in the Display options, the toolbar buttons always appear raised.

To see a description of each toolbar button, position the mouse pointer over the button; a description appears in the status bar at the lower-left of the main Eudora window if the “Show status bar” option selected in the Display options windows. If the “Show toolbar tips” option is selected in the Display options, a toolbar tip appears when you pause the mouse pointer over a toolbar button.

Adding, Moving, and Removing Toolbar Buttons
(Sponsored and Paid modes only)

**To add buttons to the main toolbar**

1. Right-click anywhere on the toolbar, even on a button, to display the drop-down list.

2. From the drop-down list, choose *Customize*.

   *The Customize toolbar window appears.*
The Customize window contains six tabbed panels: General, Mailboxes, Plugins, Recipients, Stationery, and Personalities. Each of these panels lets you add toolbar buttons for functions related to the tab title.

NOTE: The procedures for adding a toolbar button from each panel are similar.

3. In each panel, choose an item from the categories list on the left, and the corresponding button icons for that category are shown in the Buttons section on the right.

4. Click to select one of the button icons and view a description of the button's function in the Description field at the bottom of the panel. These descriptions also appear in the status bar of the main Eudora window if the bar is currently displayed when you position the mouse pointer over the button icon. In this case, you don’t have to click the button.

NOTE: In these button descriptions, any instruction to hold down the Shift key means to do so when you are actually using the button from the toolbar, not when you are adding the button to the toolbar, and not when you are clicking on the button in the Customize window to view its description. For example, if you click the New Message button in the main toolbar, a new composition window opens. If you hold down the Shift key and click the New Message button in the main toolbar, the Message Options dialog box appears, allowing you to select options for creating a new message (Personality and Stationery).

5. Drag the button icon to your desired position on the toolbar.
NOTE: If you need help at any time during toolbar customization, click the Help button in the Customize dialog box.

6. When you are finished adding toolbar buttons, click the Close button to close the Customize dialog box.

Following are specific instructions for the tabbed panels of the Customize window:

- **General**—The Categories list contains names of menus and submenus. The buttons correspond to commands on these menus and submenus. For more information on the functions of these commands, see Using Menu Commands on page 277.

- **Mailboxes**—The Mailboxes list shows the same view as your Mailboxes window, open it by choosing Mailboxes from the Tools menu. To add a toolbar button for a mailbox, click the mailbox and drag the appropriate button to the toolbar. If the mailbox is in a closed folder, double-click the folder icon to open it and display its contents (or click the plus-sign [+] to open the folder), then click the mailbox and drag the desired button to the toolbar. Note that you cannot add a toolbar button for a mail folder. For more information on the Mailboxes window, see Using the Mailboxes Window on page 150.

- **Plugins**—The Plugins list shows installed message and resource plug-ins. You can add a plug-in button to the toolbar so that just by clicking on the button, you launch the plug-in application. Note that if you elected to install QUALCOMM’s PureVoice voice-messaging software plug-in when you installed Eudora, Eudora automatically adds a toolbar button for the PureVoice plug-in at the extreme right of the toolbar. See Plug-ins (Extended Messaging Services) on page 407 for more information on installing and using plug-ins.

- **Recipients**—The Recipients list on the left shows all recipients that are listed on your Quick Recipient List, which is the list of recipients to whom you frequently send mail. See Using the Recipient List on page 252 for more information. The buttons correspond to functions you can perform when addressing and sending mail to recipients on your list: New Message To, Forward To, Redirect To (all on the Message menu), and Insert Recipient (on the Edit menu). If there are no recipients on your Quick Recipient List, the Recipients area of this dialog box panel is empty.

- **Stationery**—The Stationery list shows all of your stationery files. The buttons correspond to stationery-related commands: New Message With, Reply With, and Reply to All With, all under the Message menu. For more information on using stationery, see Using Stationery (Sponsored and Paid modes only) on page 109.
• **Personalities**—The Personalities list shows all of your email accounts if you use multiple personalities (multiple accounts). The buttons correspond to personality-related commands, such as the Message menu Change Personality command. For more information on using multiple personalities, see Using Multiple Personalities (Sponsored and Paid modes only) on page 115.

**Moving a Toolbar Button**

To change the placement of a button on the main toolbar, hold down the Alt key and drag the button to where you want it.

**Removing a Toolbar Button**

To remove a button from the main toolbar, hold down the Alt key and drag the button off the toolbar.

**Adding and Removing Separators**

To add a separator line between two toolbar buttons where no line currently exists, first determine which button is farther from the gripper bar when the toolbar is docked. Now hold down the Alt key and carefully drag that button a little bit in the direction *opposite* the gripper bar. A separator line will be inserted between the two buttons. Be sure to drag the button less than one button-width away from its position; if you overdrag it, you will hop over the adjacent button and reposition the dragged button on the toolbar.

To remove a separator line from between two toolbar buttons, again determine which of the two buttons is farther away from the gripper bar when the toolbar is docked. Now hold down the Alt key and drag that button toward the gripper bar. The separator line is removed. Alternately, you can hold down the Alt key and drag the other button slightly in the direction *away* from the gripper bar, and that will remove the separator line. Again, be careful not to drag either button too far, or you will reposition it past the adjacent button on the toolbar.
Eudora Taskbar

The Eudora taskbar appears along the bottom edge of the window work area in the main Eudora window, and normally shows the QUALCOMM logo at the right.

*Sample Eudora taskbar and status bar*

The Eudora taskbar displays a button for each normal Eudora window that is open or minimized. The taskbar provides a convenient way to switch between normal windows by clicking buttons, without having to display the different windows from the Window menu.

The Eudora taskbar is modeled after the Windows 98/XP and Windows NT 4.0 system taskbars, which usually appear at the bottom of the screen — but there are important differences, as noted below.

**To show or hide the Eudora taskbar**

1. From the Tools menu, choose **Options**.
2. Scroll through the category list and select **Display**.

   *The Display options window appears.*

Select or deselect **Show MDI task bar** option.

Any *normal* Eudora window that is open or minimized is represented by a button on the taskbar. This includes composition messages, received messages, mailbox windows, and any tool windows or tabbed windows that are in the normal state. Any open tool or tabbed windows that are in the docked or floating state are *not* represented as buttons on the taskbar.

If a tabbed window is represented by a button on the taskbar, the button shows the name and icon associated with the active tool window in that tabbed window.

Click a taskbar button to make that normal window active. The window comes to the front of the stack of all normal Eudora windows.

If you right-click a taskbar button, the standard Windows context menu displays, letting you Restore, Minimize, Maximize, or Close that normal window.
If you right-click an exposed area of the taskbar (not on a button), the standard Eudora dropdown context menu displays.

If you drag an object over a taskbar button and pause for several seconds, Eudora activates the normal window associated with that button. For a tabbed window, Eudora activates the tabbed window with the indicated window active. You can then complete the drag and drop operation into the normal window. For a tabbed window, you can further pause the pointer over one of the inactive window tabs, and that window becomes active and you can complete the drop.

Each taskbar button displays both the window icon and the window title of the normal window. If there is not enough room to display the entire title, Eudora truncates the title and places an ellipsis (...) to indicate the truncation. If you pause the mouse pointer over such a button, Eudora displays the entire window title in a tooltip.

If you have many normal windows open or minimized, the taskbar buttons shrink so that all buttons are visible. When the bar becomes sufficiently crowded, the QUALCOMM logo is hidden to make room.

Note that, unlike with the Windows 98/2000/XP and Windows NT 4.0 taskbars, you cannot move the Eudora taskbar to another edge of the main Eudora window; it always stays at the bottom of the window work area. You also cannot resize the taskbar as a separate item. It resizes automatically, however, when you resize the main Eudora window.

A New Mail notification icon in the Windows 98/XP/NT 4.0 System Tray (clock area) also tells you when new mail has arrived. If you hold the mouse over the icon, a tooltip tells you how many messages you have. If you double-click the icon, Eudora is brought to the foreground. The icon goes away when you click the mouse button, or press a key, inside the Eudora window.

New Mail notification icon

12:29 PM
Filter Report Window

Eudora generates a filter report if the “Generate Filter Report” option is selected in the Getting Attention options window. This report can be viewed in the Filter Report window. See Getting Attention on page 334.

To open the Filter Report window

- From the Tools menu, choose Filter Report. Or, if the Filter Report window is in a visible tabbed window, click its tab.

Sample Filter Report window

If the generation of a filter report is enabled via the option mentioned above, then each time a filter operation is performed, Eudora adds the entry or entries to the Filter Report window and activates the window.

The Filter Report window displays three columns of data.

- **Mailbox**—Lists the names of the mailboxes into which messages have been filtered during the current Eudora session. Each listing represents one filter operation for that mailbox.

- **Messages**—Lists the number of messages filtered into each mailbox in the Mailbox column during the filter operation.

- **Time**—Lists the time that the messages were filtered into each mailbox in the Mailbox column during the filter operation.

By default, the entries in the window are sorted by time. However, you can click the column headings and sort the display by mailbox names (Mailbox) or by the number of messages filtered (Messages).
NOTE: Whenever new entries are added to the list, Eudora always appends them to the bottom of the list in order of arrival, ignoring the current sort order. Simply click a column heading to re-sort.

Select one or more entries in the list and double-click the selection, or press Enter, and Eudora opens the mailbox windows associated with those selections.

The Filter Report listing is a cumulative log of the filter actions for the current Eudora session. Eudora automatically clears the log when you quit the program.

Closing the Filter Report window does not erase the contents of the filter report. Only quitting Eudora erases this information.

File Browser Window

Use this window to browse the Windows desktop. For example, you can use this window to find files to attach to new outgoing messages.

To open the File Browser window

1. From the Tools menu, choose File Browser. Or, if the File Browser window is in a visible tabbed window, click its tab.
The File Browser window performs some, but not all of the functions of the standard Windows 98/XP and Windows NT 4.0 Explorer programs.

**NOTE:** The File Browser window is *not* an exact replica of Windows Explorer.

The File Browser window contains three controls:

- **Drive Selector** (top box)—A drop-down list in this field contains a fixed set of high-level folders on your system, just like the corresponding control in Windows Explorer. The Drive Selector field determines what appears in the Folder Browser (middle section). When you first launch Eudora, the Drive Selector automatically sets itself to the drive containing your Windows folder. Note that the first entry in the drop-down list is a shortcut called “My Attachments” that points to your Eudora attachments folder.

- **Folder Browser** (middle section)—This is a tree control that displays the folder hierarchy whose root is the selection entered in the Drive Selector field. For example, if in the Drive Selector box you choose the C: drive, then the Folder Browser displays the folder tree-hierarchy branching down from the C: drive folder. Right-click a folder item in the Folder Browser to display the standard Windows context menu for that folder.

- **File List** (bottom section)—This is a list control that displays the files contained in the folder selected in the Folder Browser. You can select one or more file items in the list, then right-click the selection to display the standard Windows context menu for those files. (Eudora does not fill in the “Send To” submenu on the context menu.) When selecting multiple items, use the Shift key to select a range of items, and use the Ctrl key for disjoint selections.

The File List control shows these four columns:

- **Name**—Displays the name of the file and the icon associated with the file.
- **Type**—Based on the file name extension, displays the file type as set in the Options dialog box of Windows Explorer.
- **Size**—Displays the size of the file in kilobytes (K), where 1K = 1,024 bytes.
- **Modified**—Displays the date and time that the file was last modified.

As in Windows Explorer, you can click any of the four column headings to sort the listing by the data in that column.
You can also resize the widths of the columns by dragging the separator line between the column heading labels. Position the pointer over the separator until you see a splitter cursor, then drag the line to left or right.

In the File List control, double-click an item in the Name column, or select one or more items in the column and press Enter to open the selected items. For program files, this action launches the program. For document files, this action generally launches the registered viewing or editing application for that document. Eudora displays an error dialog box if it is unable to open a file in this way.

To adjust the relative heights of the Folder Browser and File List controls, position the pointer over the separator bar between the Folder Browser and File List controls until the splitter cursor appears, then click and drag the separator up or down. Note that the File Browser window maintains a minimum height for the Folder Browser and File List controls, so you cannot close them all the way.

To manually refresh the File Browser window display, right-click anywhere in the File Browser window but not on a Folder Browser item or File List item, then choose “Refresh” from the drop-down context menu.

**TIP:** A good place to right-click is in the Drive Selector box. Alternately, press the F5 key while keyboard focus is in the File Browser window.

You can select one or more files in the File List control and drag them to a message composition window to attach those files to that outgoing message. This is especially handy if you keep the File Browser window docked and open. For multiple file selections, use the Shift key to select a range, and use the Ctrl key to make disjoint selections.

You can also select one or more items in the File List control and drag them to another application that can receive such files.

In general, the File Browser window lets you drag items out of the window (copying them rather than moving them), but the window is not a proper drop target; you cannot drop items into the window that you’ve dragged from elsewhere on your desktop. In particular, you cannot move files by dragging them to a target folder in the Folder Browser control. You also cannot drag and drop items within the File Browser window (from one control to another, for example). You can, however, manage the files and folders in the window using the commands on the window’s context menu, such as Cut, Copy, Paste, and Delete. To display the drop-down context menu to use these commands, you must first select the file you want then right-click.
Background Tasks (multi-threading)

In Eudora, you can retrieve, send, and compose mail at the same time! While sending and retrieving mail, you can compose a message, access Directory Services to look up addresses, edit stationery and signatures, read mail, etc. because retrieving and sending mail now occurs in the background.

The Task Status window is used to display sending and receiving activity as it happens. For example, when you check and send mail simultaneously, the progress of these functions are displayed in the Task Status window. Also, you can send messages from different personalities at the same time.

The Background Tasks options found in Options under the Tools menu allow you to set parameters that determine how background tasks behave, and what kind of information you want to see in the Task Status window. In other words, you can configure the behavior of background tasks. Also, you can set the Task Status and/or the Task Error windows to be brought to the front of other windows in Eudora when activity occurs.

In the Background Tasks options window, you can indicate the number of seconds of user inactivity before your newly retrieved mail is actually processed by Eudora. If you have automatic mail checking set up in the Checking Mail options, Eudora will retrieve the mail in the background from the incoming server at those time intervals. But Eudora will not process it until there is no user activity performed on your computer for the amount of seconds you indicate in the Background Tasks options window. An envelope displayed on the status bar, located at the lower right-hand corner of the Eudora window, indicates that there is retrieved mail to be processed; that is, messages to be filtered and placed in mailboxes.

**Technical Note.** In the background, Eudora retrieves and sends mail; in the foreground, Eudora processes attachments and applies filters.

If you check your mail manually, it is retrieved from the server immediately and delivered to Eudora without waiting for user inactivity. However, if you do a manual check and then perform a task in Eudora while Eudora is retrieving your mail, Eudora will wait for user inactivity before processing your newly retrieved mail. When this occurs, the envelope displays on the status bar until the user inactivity time specified has been reached.

**NOTE:** The envelope that displays on the status bar only indicates that mail is waiting to be processed. It does not mean that you have new mail waiting on the server. When your mail is processed, user inactivity time is needed for your mail to be filtered and attachments decoded. Your inactivity allows you to decide when you want your mail processed.
Managing Windows in Eudora

Envelope displayed on the status bar

If you click once on the envelope, the mail is processed. If you right-click on the envelope, a drop-down list appears.

Envelope’s drop-down list

- To send or retrieve your messages in the background, choose Process All Waiting Tasks.
- To display the Task Status showing background activity, choose Show Task Status.

Task Status Window

The Task Status window displays background activity: retrieving mail from incoming servers and sending mail to outgoing servers. Mail can be retrieved and sent from each of your personalities simultaneously. Progress information is described in Background Tasks on page 336.

To access and display the Task Status window

1. From the Tools menu, choose Task Status. Or, if the Task Status window is in a visible tabbed window, click its tab. The Task Status window appears.

Task Status window

Notice the progress indicators on the status bar located at the right-hand bottom of the Eudora window. A progress bar and spinning black and white ball indicate that background tasks are occurring.
Progress bar and task progress indicator

On the progress bar or spinning indicator, click to display the Task Status window. Right-click to display the indicator’s drop-down list.

Task indicator’s context menu

- Choose **Stop All Tasks** to cancel the tasks currently occurring.
- Choose **Go offline** to disconnect from the server. An alert window appears letting you know that you are offline and cannot connect to the server. This is useful if you are using a laptop computer.
- Choose **Show Task Status** to display the Task Status window.

You can see if your sent messages are sent, queued, or processing in your Out mailbox.

The following icons display to the left of the message name in your Out box:

- ![Message is sent.](image)
- ![Message is queued.](image)
- ![Message is processing.](image)

Following are field descriptions for columns in the Task Status window.

**Task**—(default) An icon and its description displays in this column indicating what function Eudora is performing. In the above example, the Send icon appears.

**Persona**—This column is available only if have set up more than one personality. If checked, the Personal column displays the personality name for the given task.

**Status**—(default) Displays a general description of the tasks current status, for example, “Logging into POP server.”

**Details**—Displays more information of the tasks’ status including network protocol commands.
Progress—(default) Displays a progress bar indicating the overall progress of the tasks.

Task Error Window

The Task Error window displays an error message as it occurs. In the example below, a password error appears. You can indicate if you want the Task Error window brought to the front when an error occurs. See Background Tasks on page 336.

To access and display the Task Status window

1. From the Tools menu, choose Task Errors. Or, if the Task Error window is in a visible tabbed window, click its tab. The Task Error window appears.

Task Error window displaying an error

Notice the task error icon on the Eudora tool/status bar at the lower-right of the main Eudora window. Click this icon to display the Task Error message. To expand the message, click Details.

Following are field descriptions for the Task Error details window.

Persona—The personality name associated with this error appears.

Title—The name of the Eudora function when this error occurred.

Status—The name of the system function when this error occurred.

Info—More information on this error appears, if any.

Time—The time and day of this error appears.
Link History
(Sponsored and Paid modes only)

Link History is a new option on the Tools menu that displays Internet web site URLs, attachments, and ads that have appeared in Eudora.

To display your link history

1. From the Tools menu, choose **Link History**.

   The Link History window appears.

2. To view a link in the list, double-click the item or click to highlight it, then click **View**. To remove the link from the list, click **Remove**.

If you right-click in the Link History window, a context menu appears.

---

**Managing Windows in Eudora**

228
Managing Windows in Eudora

Copy—copies the link item to the clipboard.

View—displays the link item’s web site page.

Remove—deletes the link item.

Change Date Display—displays a submenu allowing you to set reminders when to see the link, bookmark the link, or sort the link items by date.

Change Date Display submenu

<table>
<thead>
<tr>
<th>Reminder Date (Sorts Higest)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bookmark (Sorts Higest)</td>
</tr>
<tr>
<td>Just Date (Sorts Normal)</td>
</tr>
</tbody>
</table>

NOTE: The items in this window expire and do not appear after 30 days.

Statistics Window
(Sponsored and Paid modes only)

You can now display and print your Eudora usage statistics. These statistics keep track of how many messages you receive and send in a particular day, week, month, or year. You can also see how many attachments were received and sent as well as how many messages were read. In the Sent Email section, you can see how many messages you have replied to, forwarded, and redirected during a specific timeframe.

You can also view statistics and charts based on the emails that SpamWatch scores as being Junk. Accuracy of statistics is based on your usage of the Junk and Not Junk commands to train and correct SpamWatch.

NOTE: Eudora usage statistics are statistics for you only. No statistical information is sent to QUALCOMM or any other location.

To display the Statistics window

1. From the Tools menu, choose Statistics.

   The Statistics window appears.
2. From the drop-down menu, choose to see email usage statistics for the Day, Week, Month, or Year.

3. To see more statistical information, for example Attachments received, check the More Statistics box.
NOTE: To change the color, graph type, and other settings for the Statistics window, go to Statistics (Sponsored and Paid modes only) on page 354 for more information.

Printing the Statistics Report

To print the information in the Statistics window

- With the Statistics window open, go to the File menu and choose Print.

  Your Statistics report will print.
The Address Book is where you keep information about individuals or groups that you correspond with. Each entry in the Address Book includes a name for a person or group, their full email address (email addresses for groups), a full name, any contact information including both home and work information, other email addresses and information, and any notes. You can also use the Address Book to put names on the Recipient List, and to address a new message. See Using the Recipient List on page 252.

To open your Address Book

1. From the Tools menu, choose Address Book, or press Ctrl+L, or click the Address Book icon on the toolbar.

Address Book with sample entries

![Address Book window with sample entries](image-url)
All of the names are kept in address books, so you can group your names by putting them in different address books. Eudora Nicknames is the default address book, and the example above shows an additional address book called “Family.”

To show or hide the names in an address book, click the book icon to the left of the file name. If the book is closed, the names are hidden; if the book is open, the names appear.

You can use the View By drop-down menu to display the names by different criteria, for example by Last Name. If you want to view the entries by Last Name, choose Last Name from the View By drop-down list. If you view by a field that does not contain any data, the entry appears as the nickname enclosed in brackets preceded by spaces: <<Dad>>. If you view by a field that doesn’t contain any data, the entry appears with << >>.

NOTE: Eudora remembers your selection in the View By field when you quit and restart the program.

You can do the following in the address book window:

- You can also start typing in the list of entries, and the appropriate entry is selected when you enter enough unique characters to identify it.
- To page up and down in the list of entries, use the arrow keys. To resize the list, drag the divider.
- To move the keyboard focus back and forth between the left and right sides of the Address Book, press F6.
- To move quickly through the tabbed panels on the right side of the Address Book, use the Ctrl+Tab, Ctrl+PgUp, Ctrl+PgDn, Ctrl+Home, and Ctrl+End keys.

**Printing Your Address Book**

**To print your Address Book entries**

- While the Address Book is opened, from the File menu, choose **Print**.
Using the Address Book

Searching for Your Address Book Entries

To search for entries in your address book

1. With your address book open, press Ctrl+Shift+F or from the Edit menu, choose Text, then Find Text.

2. In Find dialog, enter the nickname of the person you are searching for.

That person’s entry appears.

Creating an Address Book within your Address Book
(Sponsored and Paid modes only)

To create an address book within your Address Book

1. From the Tools menu, choose Address Book, or press Ctrl+L. Or, if the Address Book is an inactive window in an open tabbed window group, click its tab.

2. Click New Book.

The New Address Book dialog box appears.

New Address Book dialog box

3. Enter a name for the new address book in the text box and click OK.

The address book appears on the list, and you can now add people and group to your newly created address book.

Adding a Person to the Address Book

To create a new entry or entries to be included in the newly created address book

1. From the Tools menu, choose Address Book, or press Ctrl+L. Or, if the Address Book is an inactive window in an open tabbed window group, click its tab.
2. In the Address Book, choose which address book (if more than one is set up) in which you want this person’s information listed, for example “Family.”

3. Either click New in the Address Book, or right-click anywhere in the entry list to display the drop-down list and choose New.

* A new entry appears in the address book column (left side).

4. In the Nickname field (right side of window), enter what you want to call this person.

   A nickname, sometimes called an alias, is an easily remembered, shorter substitute for the email address in the entry. Nicknames can be used in place of proper email addresses in the To, Cc, and Bcc header fields of outgoing messages. A nickname entered here should be the name you wish to type in a header field (To, Cc, Bcc) when composing an email message. For example, although your Dad's name is John Smith, you can enter "Dad" as the nickname. So when you address a message, you can just enter "Dad" in the header field.
NOTE: You cannot use the actual email address as the nickname. It must be different.

5. If you want the nickname on your recipient list, check the **Recipient list** box.
   
   *Once the person is on the recipient list, the name is bolded in the address book list.*

6. To create the entry, click anywhere or press Enter.

7. Click the **Personal** tab.
   
   *The Personal dialog appears.*

   **Personal dialog box**

8. In the **Full Name** field, type the real name or an informal name for the person. If there is just one address for the entry, this name and the address are included in the “To:” field for your recipient to see.

9. In the **First Name** and **Last Name** fields, type the first and last name of the person. You can interchange the first and last names by clicking ![exchange](image).

10. In the **This nickname will expand to the following addresses** text field, enter at least one complete email address for this person. If this person has more than one address, enter the additional addresses here if you want him or her to receive your messages at each address.
Make sure this field contains no other information except addresses and nicknames, or your messages will be addressed incorrectly.

It is recommended that you have no more than 2,000 nicknames per nickname file. If the files are too large, they may appear collapsed in the address book, but you can still use all the nicknames when addressing messages. If you have a large number of entries, you might want to consider using a Ph or LDAP server.

11. To save your changes to the Address Book, from the File menu choose Save.

Adding a Group to the Address Book

You can set up a group as an address book entry by adding the group’s email addresses or nicknames (if already set up in your address book) in the Personal dialog box.

To create a new group in an address book

1. From the Tools menu, choose Address Book, or press Ctrl + L. Or, if the Address Book is in an inactive window in an open tabbed window group, click its tab.

2. In the Address Book, choose which address book (if more than one is set up) in which you want this group’s information listed. Click New.

3. Type the nickname in the Nickname text field on the right side of the window, for example "My buddies."

   The nickname entry appears in the list, and you can now add information for this entry.

4. When finished, click anywhere or press Enter and the nickname appears in the list.

5. Click the Personal tab.

   The Personal dialog box appears.
6. In the **Full Name** field, type the a descriptive or an informal name for the group. This name is included in the "To" field for your recipient to see.

7. In the **This nickname will expand to the following addresses** text field, type the complete email address for each person included in the group. Separate multiple addresses with commas or carriage returns (this is the only place you can use a carriage return to separate addresses). You can also use nicknames in this field, but be sure that any nicknames you use are defined by their own entry. You can use a mixture of nicknames and complete email addresses.

**NOTE:** Make sure this field contains no other information except addresses and nicknames, or your messages will be addressed incorrectly.

8. If you want to put this group on your recipient list, check the **Recipient List** box.

*The group’s name is bolded in the address book list.*
Adding Entry Information

In the Eudora Address Book, there are several dialogs in which you can add information for a person or a group. These text fields may be used liberally when entering information. Following is a description of each dialog. Personal dialog is described in the Adding a Person to the Address Book on page 235.

To enter Home information for this entry

1. In the left side of the window, choose the entry for whom you want to enter information. His or her nickname appears in the Nickname field.

2. Click the Home tab.

   The Home dialog box appears.

   **Address Book Home dialog box**

   ![Address Book Home dialog box](image)

   - **Nickname:** intrepidadventurers
   - **Street Address:** 9 Main Street
   - **City:** Law City  **State/Province:** CA
   - **Country:** USA  **Zip/Postal Code:** 98789
   - **Phone:** (481) 616-2342  **Fax:** (481) 615-4223
   - **Mobile:** (823) 415-4216
   - **Web:** www.intrepidadventure.com

3. In this dialog box, you can type postal information, phone numbers, and a web site address for this person. All fields are optional.

4. If you'd like to swap the Home and Work information, click Swap with Work.

5. If the information listed here is this person's main information, check the Primary Information box.
To enter work information

1. Click the **Work** tab.

*The Work dialog box appears.*

**Work dialog box**

<table>

</tbody>
</table>

2. In this dialog, you can type the person's work information, including title, company name, postal address, phone numbers and a web site address for this person's company. All fields are optional.

3. If you'd like to swap the work and home dialog information, click **Swap with Home**.

4. If the information listed here is this person's main work information, check the **Primary Information** box.

To enter other information

1. Click the **Other** tab.

*The Other dialog box appears.*
2. In this dialog, you can type other email addresses, phone numbers, and web site addresses for this person. All fields are optional.

**To enter more information on this person**

1. Click the **Notes** tab.

   *The Notes dialog box appears.*
2. In this dialog, you can type anything you want. This is a good place to enter information such as the person’s birthday and other important dates specific to this person.

To save your changes to the Address Book

- From the File menu, choose Save or press Ctrl+S. Or if you close the Address Book, click Save in the warning dialog.

**NOTE:** If your Address Book has duplicate entries, Eudora recognizes only the topmost entry of the duplicates.

Changing, Deleting, Moving, Copying and Saving Entries

- To change the nickname for an entry, see the next section, “Renaming a Nickname.”
- To change an Address Book entry, choose the entry from the list and edit the fields in any of the address book’s dialog boxes as appropriate.
Using the Address Book

- To delete an entry or an address file, select it from the list and click the Delete button or press the Delete key. Or, right-click it and select Delete from the drop-down list. You cannot remove the Eudora Nicknames file.

- If a nickname file is set to read-only, meaning you cannot change it, you cannot move or copy entries into it, or delete an entry from it.

- To save your entries, from the File menu, choose Save. Your address book entries are saved.

NOTE: You save your address book entries in CSV format. This allows you to save the entire contents of your address book as a single CSV formatted file. With your address book open, from the File menu, choose Save As. The Save As dialog appears for you to save the .csv file. To save only selected address book entries, hold the Ctrl key down when selecting entries.

To move or copy an entry to another address book

1. Right-click the address book entry to display the drop-down list.

2. From the drop-down list, choose Move To to move an entry or Copy To to copy an entry.

   The Choose a Nickname File dialog box appears so that you can select the file to which you want to move or copy the entry.

Choose a Nickname File dialog box

3. You can move an entry (or entries) to a different file by dragging it, or copy it by holding down the Shift or Ctrl key and then dragging it.

   You cannot move an entry into the file it is already in, but you can copy an entry into its file. A “Copy of [Entry]” is created.

4. To save your changes, from the File menu, choose Save.

   TIP: Add a button for the File menu’s “Save” ctrl to your main toolbar as a handy way to save Address Book changes.
Renaming a Nickname

To change the nickname for an Address Book entry

1. Set the View By field to Nickname and make sure the desired entry appears in the list.

2. Click the nickname for the entry, pause, and click it again. You can then edit the nickname in the edit box that appears.

   Alternately, click the nickname once to highlight it, then in the Nickname field in the Personal dialog box, enter the new nickname and press Enter.

   **NOTE:** If you change a nickname, be sure to correct any entries that reference that nickname.

Addressing a New Message from the Address Book

You can open and address a new message from the Address Book using the To:, Cc:, and Bcc: buttons.

To create a new message from the Address Book

1. In the Address Book entry list, choose the entry you want to address the message to. To choose multiple entries in sequence, hold down the Shift key, or to select entries non-consecutively, hold down the Ctrl key

2. Click To:, Cc:, or Bcc: at the bottom of the Address Book.

   \emph{A new composition window appears with the selected nickname(s) inserted in the recipient field.}

   **NOTE:** Also, you can double-click an entry to enter that nickname in a header field. A new composition window is opened and the nickname is entered in the To: field automatically. If a composition window is open when you double-click, the nickname is entered in the header field that last had keyboard focus.

To address the message with the completely expanded address or addresses for that entry, rather than the entry’s nickname (the addresses are listed in the
Address(es) field for the entry)

1. From the Tools menu, choose Options.
2. Scroll and choose Miscellaneous.

The Miscellaneous dialog box appears.
3. Turn on the Automatically ExpandNickname option.

Once the composition window appears, you can use the To:, Cc:, and Bcc: buttons to insert additional nicknames into the corresponding fields, subject to the following restrictions.

- If the Address Book is a docked or floating window, either alone or as part of a tabbed window group, the To:, Cc:, and Bcc: buttons apply to the topmost composition window, if any.
- If the Address Book is a normal window, either alone or as part of a tabbed window group, the To:, Cc:, and Bcc: buttons apply to the composition window, if any; that is, immediately under either the Address Book or the tabbed window group containing the Address Book.

Make Address Book Entry Command

The Make Address Book Entry command is used to create entries in your Address Book and is especially helpful for making group entries. You can use this command from anywhere in Eudora, including open messages, open mailbox windows, the Address Book, and the Directory Services window.

To use the Make Address Book Entry command, do one of the following:

- In an open window, go to step 1.
- In an open mailbox window, first select the message summary or summaries you want in the address book, then go to step 1.

1. From the Special menu, choose Make Address Book Entry.

The Make Address Book Entry dialog box appears.
Using the Address Book

Make Address Book Entry command and dialog box

2. In the **Nickname** text box, Eudora enters the name in the email address or the message. You can change it if you like.

3. In the **Full Name** field, Eudora enters the full name as it appears in the email address of the message. You can change it if you like.

4. In the **First Name** and **Last Name** fields, Eudora enters the first and last name of the person as it appears in the email address or the message. You can change it if you like.

5. In the **This nickname will expand to the following address** field, Eudora enters the email address as it appears in the message. You can change the email address if you like.

If you choose multiple message summaries in the mailbox window, addresses are taken from each message and all are put in the new entry.

If the open or selected message is an outgoing message, the new entry will include all of the addresses in the To:, Cc:, and Bcc: fields.

If the open or selected message is an incoming message, the new entry will include the address in the From: field.

6. If you have more than one address book, in the **In the Address Book** drop-down list, choose the address book in which you want to place this nickname. You cannot make a new address book using the **Make Address Book Entry** command.

7. If you want to put the nickname on your Recipient List, check the **Put it on the recipient list** box.

8. If you want to put the nickname on your BossWatch List, check the **Put it on the BossWatch list** box.
9. When finished, click **OK**.

   *The new entry is now in your address book.*

**NOTE:** If your new nickname has the same name as an existing nickname, a prompt appears asking if you want to add the address(es) to the existing nickname or replace the existing nickname with the new address(es).

Also, when you use the *Make Address Book Entry* command in an open message or mailbox window, Eudora uses your current Replying settings. If the *Reply to all By default* setting is turned on, the new entry will include all of the recipients of the message plus the sender. However, if the *Include yourself* setting is turned off and the current message is an incoming message, your address is not included in the new entry.

### Creating a Group from the Address Book

You can take several of your existing nicknames and group them together under one composite nickname. For example, you can quickly combine your Family, Friends, and School nicknames under a composite nickname called Everybody. The Everybody entry contains the nicknames Family, Friends, and School, rather than their expanded email addresses. However, if you address a new outgoing message to Everybody, it will be sent to all of the email addresses contained in the Family, Friends, and School entries.

**To make entries from the Address Book**

1. From the Tools menu, choose **Address Book**. Or, if the Address Book is in a group of tabbed windows, click its tab.

   *The Address Book window appears.*

2. Choose several different entries in the entry list (hold down the Shift key to select multiple entries in sequence, or the Ctrl key to make nonsequential selections).

3. From the Special menu, choose **Make Address Book Entry**.

   *The Make Address Book Entry dialog appears.*
4. In the **Nickname** text box, type a nickname for the new entry.

5. In the **Full Name** field, type a descriptive name for this group.

6. In the **This nickname will expand to the following address** field, Eudora displays the nicknames you selected from the Address Book. You may add more nicknames and email addresses if you'd like.

7. If you have more than one address book, in the **In the Address Book** drop-down list, choose the address book in which you want to place this group.

8. If you want to put the group on your Recipient List, check the **Put it on the recipient list** box.

9. If you want to put the nickname on your BossWatch List, check the **Put it on the BossWatch list** box.

10. When finished, click **OK**.

   *The new group is now in your address book.*

**NOTE:** If your new group has the same name as an existing group name, a prompt appears asking if you want to add the address(es) to the existing name or replace the existing name with the new address(es).

## Finish Address Book Entry Command

By using the **Finish Address Book Entry** command, you can enter a unique portion of a nickname in the **To;**, **Cc;**, or **Bcc:** fields of a message.
Using the Address Book

To use the Finish Address Book Entry command to complete a nickname in your message

1. In the To:, Cc:, or Bcc: field, type a unique portion of the nickname.

2. From the Edit menu, choose Finish Address Book Entry.

   The nickname drop-list for that letter appears.

3. Choose the desired nickname from the list.

To insert the real addresses for the entry instead of the nickname

- Hold down the Shift key and from the Edit menu, choose Finish & Expand Address Book Entry.

To set this auto-expansion to happen all the time (so that you don't have to hold down the Shift key), check the Automatically Expand Nicknames box in the Miscellaneous options in Options under the Tools menu.

For an alternate way to complete nicknames, see the section, Using Automatic Name Completion (Sponsored and Paid modes only) on page 39.

Using the BossWatch List

The BossWatch List is your list of recipients you wish to call special attention to when composing messages.

To add a nickname to the BossWatch List

1. From the Tools menu, choose Address Book, or press Ctrl+L. Or, if the Address Book is an inactive window in an open tabbed window group, click its tab.

2. Click to select the desired entry in your Nickname list.

3. On the right side of the window, check the BossWatch List box, or right-click the selected item to display the drop-down list.

BossWatch List checkbox in the Address Book
4. From the drop-down list, choose **Add to BossWatch List**. The entry’s nickname is added to the BossWatch List, and the entry is displayed with a red exclamation point in the Address Book list.

**To remove an entry from the list**

1. Open the **Address Book**.
2. Click to select the desired entry in your Nickname list.
3. Right-click the item to display the drop-down list.
4. From the drop-down list, choose **Remove From BossWatch List**. The entry’s nickname is removed from the BossWatch List and the entry’s icon no longer displays a red exclamation point in the Address Book list.

**Including Nicknames on the Recipient List**

**To include a nickname in the Recipient List**

1. Right-click the appropriate Address Book entry in the list to display the drop-down list.
2. From the drop-down list, choose **Add to BossWatch List**.

   *The nickname for the selected entry is included on the BossWatch List, and the entry is displayed with a red exclamation point in the Address Book list.*

**To remove a nickname from the BossWatch List**

1. Right-click the item in the Address Book list to display the drop-down list.
2. From the drop-down list, choose **Remove From BossWatch List**.

   *The nickname for the selected entry is removed from the BossWatch List, and the entry’s icon no longer displays a red exclamation point in the Address Book list.*

You can add or remove multiple nicknames to or from the BossWatch List by selecting multiple entries before right-clicking. Hold down the Shift key to select multiple entries in sequence, or the Ctrl key to select entries non-consecutively.
Using the Address Book

Using the Recipient List

The Recipient List is your list of recipients to whom you often send mail.

To add a nickname to the Recipient List

1. From the Tools menu, choose Address Book, or press Ctrl+L. Or, if the Address Book is an inactive window in an open tabbed window group, click its tab.

2. Click to select the desired entry in your Nickname list.

3. On the right side of the window, check the Recipient List box, or right-click the selected item to display the drop-down list.

4. From the drop-down list, choose Add to Recipient List. The entry’s nickname is added to the Recipient List, and the entry is bolded in the Address Book list.

To add an email address to the Recipient List

1. Open the Address Book.

2. Select the text that makes up the full address.

3. From the Special menu, choose Add as Recipient.

   The recipient’s email address is added to your Recipient List.

To remove an entry from the list

1. Open the Address Book.

2. Click to select the desired entry in your Nickname list.

3. Right-click the item to display the drop-down list.

4. From the drop-down list, choose Remove From Recipient List. The entry’s nickname is removed from the Recipient List and the entry is unbolded in the Address Book list. Or, select the item you wish to remove from the Remove Recipient submenu under the Special menu.
To open a new message addressed to someone on your Recipient List

1. From the Message menu, choose New Message To, Forward To, or Redirect To.
2. From the displayed list, select the nickname. A new message window appears addressed to the nickname you selected.

To insert a recipient into a message that you have already opened

1. Move the cursor to where you want the recipient.
2. From the Edit menu, choose Insert Recipient.

   The Insert Recipient submenu appears.
3. From the Insert Recipient submenu, choose the recipient.

   The recipient you choose is inserted into the opened message.

To insert the real address(es), instead of a nickname

1. Hold down the Shift key and from the Edit menu, choose Insert Recipient.

   The Insert Recipient submenu appears.
2. From the Insert Recipient submenu, choose the recipient. The real address of the recipient is inserted in the message. To set this to happen all the time, select the Automatically expand nicknames option in the Miscellaneous options window.

More than one recipient from the Recipient List can be added to the To:, Cc:, and Bcc: fields of any message. If you use the Insert Recipient submenu, commas are added where necessary.

Including Nicknames on the Recipient List

To include a nickname in the Recipient List

1. Right-click the appropriate Address Book entry in the list to display the drop-down list.
2. From the drop-down list, choose Add to Recipient List.

   The nickname for the selected entry is included on the Recipient List, and the entry is bolded in the Address Book list.
To remove a nickname from the Recipient List

1. Right-click the item in the Address Book list to display the drop-down list.

2. From the drop-down list, choose **Remove From Recipient List**.

   *The nickname for the selected entry is removed from the Recipient List, and the entry is unbolded in the Address Book list.*

If you change a nickname, the Recipient List is updated as appropriate. For details about using the Recipient List, see *Using the Recipient List* on page 252.

**NOTE:** You can add or remove multiple nicknames to or from the Recipient List by selecting multiple entries before right-clicking. Hold down the Shift key to select multiple entries in sequence, or the Ctrl key to select entries non-consecutively.
Using Central Address Book Files on a Server

You can set up central Address Book files on a server and configure Eudora clients so that they refer to the central files.

**NOTE:** You should be an expert user or an administrator to perform this function.

First, be sure the files are plain text, have a .txt extension, and are formatted as follows: one nickname on each line with the real addresses separated by commas, and one line for notes and info with the Notes text following the Info data. For example:

```
alias Wow joe@wow.com,lisa@wow.com,chris@wow.com
note Wow <fax: 222.2223><phone: 222.2222><address: 1234 Street>
    <name: Wow Inc.> My favorite company
```

Then, for each client application, add an “ExtraNicknameDirs” entry to the [Settings] section of the Eudora.ini file. This entry should be followed by the list of directories that contain Address Book files, separated by semicolons (;). Any Address Book files located in those directories are added to the Address Book. You will need to exit and re-open Eudora to see the new entries.

Using Address Book Files Not Created by Eudora

To use an Address Book file that was not created in Eudora, put the file in the Nickname directory located in your Eudora folder, and be sure the format is as shown in the previous section “Using Central Address Book Files on a Server.” You will need to exit and reopen Eudora to see your new entries in the Address Book.

**NOTE:** You can migrate your address book from Netscape Messenger, Outlook Express, Microsoft Outlook to Eudora. See Importing Settings to Create a Personality on page 123.
Using Directory Services

Opening Directory Services

Eudora lets you look up information about people on the Internet, within your company, and in your Eudora Address Book using four directory service protocols.

- Ph
- Finger
- Lightweight Directory Access Protocol (LDAP)
- Eudora Address Book

**To use directory services to search for someone**

1. From the Tools menu, choose **Directory Services**. Or, if the Directory Services window is an inactive window in a visible tabbed window group, click its tab.

   *The Directory Services window appears.*

**Directory Services window with an example query**
Using Directory Services

The directory service protocols available for your search are listed in the Protocols section of the window. For more information, see Using Directory Service Protocols on page 263.

The databases you can use to look up your target individual are listed in the Databases list. For more details, see Using Directory Service Databases on page 264, Adding a New Database (Server) on page 265, Modifying a Database on page 275, and Deleting a Database on page 276.

Keeping the Directory Services Window on Top

To keep the Directory Services window on top so that you can easily continue using it, select the “Keep On Top” option located at the bottom of the left pane. Eudora remembers the state of this option when you quit and restart the program.

NOTE: The behavior of this option is subject to the restrictions in the section Considering the State of the Window on page 263.

Making a Query

You can look someone up on the Internet, within your company, or in your Eudora Address Book. open the Directory Services window

NOTE: If you are using Eudora in Light mode, you cannot make multiple or simultaneous queries.

To make a query on someone

1. From the Tools menu, choose Directory Services.

   The Directory Services window appears.

2. In the Databases list, select the database(s) you want to search in your query.

   To select a database, click the checkbox to the left of the database until a checkmark appears in the box. You can select multiple databases, and you can use multiple protocols. You must select at least one database in the list for Eudora to perform the query.

   NOTE: Eudora remembers which databases you’ve selected when you quit and restart the program.
3. In the Query field, type a text string you want to search against.

If one or more of your selected databases use a protocol other than Ph, your entry in this field is always interpreted as a name. If you have only Ph servers selected as your databases, you can enter any commands that Ph will interpret.

4. To start the query, press Enter or click Start.

*The query begins, and the Start button changes to Stop.*

To stop the query before it is completed, click the Stop button. When the query is completed, or if you click Stop to cancel the query, the Stop button changes back to Start.

**Automatic Name Completion in Directory Services**
*(Sponsored and Paid modes only)*

When looking up names in Eudora’s Directory Services, Eudora remembers the name and places it in a directory services history file. So whenever you begin typing a name, a drop-down list of names from your history file displays alphabetically. Just select the desired name from the list, and the name’s information appears. Following is an example of the auto name completion function.

**Directory Services Auto Name Completion**
Reading Query Results

Your query results are listed in the left half of the Directory Services window, in the results list (top view) and the details pane (bottom view). You can resize the two views relative to each other by dragging the separator up or down.

The results list consists of one-line summaries of the “hits” or successful targets of your query. These are listed by four columns:

- **Name**—indicates the username (or other name) of the target.
- **Email**—is the email address of the target.
- **Phone**—is the target’s telephone number.
- **Database**—tells you in which of your selected databases the target was found.

Click a column heading to sort the results list alphabetically or numerically by that column. Shift-click to sort in reverse order.

To resize the columns, drag the divider line to the right of the desired column to the left or right. Note that the columns resize dynamically during a query, to accommodate the width of each target’s data.

The Status field displays the status of your query, such as Ready, Connecting, Getting Data, etc. and the number of items found as shown in your summary list. This number is updated dynamically until the query is complete or you stop it.

If the results list does not fit in the available viewing space, scroll bars appear to let you navigate through the remaining part of the list.

To view the details of a result in the details pane, select the result in the results list by clicking once on it. The full data appears in the details pane. If nothing is selected in the results list, the details pane is blank. If multiple summaries are selected in the results list, the details pane lists the details for each item, with each item separated by a divider line.

To select multiple items in the results list, use the Shift key to select a continuous range, or use the Ctrl key to make non-consecutive selections.

Scroll bars appear in the details pane if the displayed information cannot fit in the viewing space.
Addressing a Message from the Directory Services Window

You can create and address a message with the query results in the Directory Services window.

To create a new message

NOTE: Make sure there are no outgoing messages already open.

1. Perform your query.
2. Click to select one or more summaries in your results list.
3. Click the To:, Cc:, or Bcc: button.

A new message is created, and it is addressed appropriately with the selected query results.

To add an address to an existing message

NOTE: Make sure the message you want to address is active.

1. From the Tools menu, choose Directory Services, or if the Directory Services window is an inactive window in a visible tabbed window group, click its tab.

   The Directory Services window appears.

2. Perform the query.
3. Click to select one or more summaries in the results list.
4. Click the To:, Cc:, or Bcc: button.

   The addresses from the selected query results are added to the appropriate field of the current message.

NOTE: The behavior of the To:, Cc:, and Bcc: buttons is subject to the restrictions in Considering the State of the Window on page 263.
Making an Address Book Entry from Query Results

You can make a nickname from your query results in the Directory Services window and at the same time add the entry to your Address Book.

To make a nickname from your query results

1. From the Tools menu, choose Directory Services, or if the Directory Services window is an inactive window in a visible tabbed window group, click its tab.
   
   The Directory Services window appears.

2. Perform the query.

3. Click to select one or more summaries in the results list.

4. From the Special menu, choose Make Address Book Entry.
   
   The Make Address Book Entry window appears so that you can name the nickname.

The real name and email address for each selected query result is included in the new entry.

NOTE: The use of this command from this window is subject to the restrictions in Considering the State of the Window on page 263.

Printing Your Query Results

You can print and print preview the results of your query as shown in the details pane.

First perform your query, then select one or more summaries in the results list. The details pane lists the details of each selected item, with each item’s details separated by a divider line.

To preview your query details for printing

- From the File menu, choose Print Preview.

   The Print Preview window appears, showing how the query details will look when printed.

To print your query details

- From the File menu, choose Print.
NOTE: The use of these commands from this window is subject to the restrictions in the next section, “Considering the State of the Window.”

Considering the State of the Window

The behavior of some Eudora features internal and external to the Directory Services window depends on the state of the window. For definitions of window states, see on Managing Windows in Eudora on page 197.

When the Directory Services window is in the docked or floating state, either alone or as part of a tabbed window group, the following applies.

- *Keep on top* setting in the window is ignored.
- To:, Cc:, and Bcc: buttons in the window apply to the topmost composition window, if any.
- Special menu’s *Make Address Book Entry* command, and the File menu’s *Print Preview* and *Print* commands apply to the Directory Services window only if the keyboard focus is in that window.
- When the Directory Services window is in the normal state, either alone or as part of a tabbed window group, the following applies.
- *Keep on top* setting in the window is obeyed.
- To:, Cc:, and Bcc: buttons in the window apply to the composition window, if any, immediately under the Directory Services window or the tabbed window containing it.
- Special menu’s *Make Address Book Entry* command and the File menu’s *Print Preview* and *Print* commands apply to the Directory Services window only if it is the topmost normal window and is active, or if the tabbed window containing it is the topmost normal window and the Directory services tab is active.

Using Directory Service Protocols

Protocols are used to access in Directory Services to find information on persons by entering their name, email address, etc. The Protocols section of the Directory Services window lists the directory service protocols available to you to use when looking up individuals via these services.
Eudora comes with four installed protocols.

- Ph
- Finger
- LDAP (Lightweight Directory Access Protocol)
- Eudora Address Book

**NOTE:** The Eudora Address Book protocol does not appear in the list until you have created an Address Book in Eudora.

Click the column heading, Registered Drivers, to sort the protocols alphabetically. Shift-click the column heading to sort in reverse order.

You can resize the column by dragging the divider line to the right of the column heading to the left or right.

The use of the New Database button shown in this section of the window, is described under Adding a New Database (Server) on page 265.

**Using Directory Service Databases**

The Databases section of the Directory Services window lists the databases that are available to you for searching for individuals over the Internet, within your company, or in your Address Book.

Eudora comes with these servers already configured by default.

- ldap.bigfoot.com
- ldap.switchboard.com
- ldap.whowhere.com
- ldap.infospace.com
- ldapbiz.infospace.com
- ldap.four11.com
- Eudora Nicknames—or the name of your nicknames file. This last item appears only if you have a Eudora Address Book set up.

You can modify or delete these databases, and you can also create new databases. See the following sections for more information.

You use the databases in this list to perform your lookup queries. To perform a query, you must first select one or more databases in the list. To select a database, click the checkbox to the left of the database name until a checkmark appears in the box. If no databases are selected, you cannot perform a query.

You can select multiple databases to perform a query, and you can mix protocols.

Click a column heading to sort this list by that column, alphabetically. Shift-click the column heading to sort in reverse order.

To resize columns, position the mouse pointer over the divider line to the right of the desired column, and drag the line to the left or right.

The use of the Modify button in this section of the window is described in Modifying a Database on page 275. The use of the Delete button is described in Deleting a Database on page 276.

Adding a New Database (Server)

In addition to the default directory service databases that already come configured with Eudora, you can add new Ph, Finger, and LDAP databases for your Directory Services queries. By adding a new database, you can then query that database for names, email addresses, phone numbers, etc. Databases are created from the Protocols section of the window, and they must be created using one of these three listed protocols.

**TIP:** You must be able to identify the server by its description and its host name before you can add it to Directory Services.

**NOTE:** You cannot create a new database using the Eudora Address Book protocol in the list. Nickname files must be created from the Address Book window. See on Using the Address Book on page 233 for more details.
Ph Database

Ph is an online, fully indexed, fast-access white-pages directory service developed and freely distributed by the Computer and Communications Services Office at the University of Illinois at Urbana.

**To add a new Ph database**

1. In the Protocols list, click the Ph protocol to select it.

2. Click **New Database**. Or, just double-click Ph in the Protocols list.

   *The New Database window, General panel, appears.*

**Ph Database window, General panel**

3. In the General panel, enter a descriptive name for the Ph server, its Host Name or IP address of the Ph server, and the Port in the respective fields. The default port for Ph is 105. Don’t change this port number unless you know for certain that the port number is not 105.

4. Select the **Attributes** tab to display the Attributes panel.

   *The Attributes pane appears.*
In the Attributes panel, you can add, edit, or remove attributes that display in the Results List (top-half of left window) and in the Details List (bottom-half of left window). Following is an example of a Results and Details List.

**Results and Details List (left pane of Directory Services window)**

**Results List**

In the Results List, the data associated with the Ph attributes you name appear in the columns on the left pane of the Directory Services window. You do this by mapping attributes to one of the three special *Present A* field selections: Name, Email(w), and Phone(w). See step 5.
For example, if you want to display the data associated with the Ph attribute “Full_Name” in the column named “Name” in the Results List, add an attribute mapping for “Full_Name” with “Name” selected as the “Present As” value.

Details List

Any attribute name can be renamed before it appears in the Details List. This is done via the Present As field. Simply replace the text in the Details List with alternate text.

For example, if your Ph server is configured to display an attribute called Full_Name but you want only Name to display, you need to map “Full_Name” to “Name” using the “Present As” field. Therefore, any Ph query you perform on that server would display the “Full_Name” data in the Name column in the Results List.

To manage the attribute list:

1. So one of the following:
   - To add an attribute mapping to the attributes list, click Add.
   - To edit an attribute mapping, click the attribute on the list and click Edit. Edit the attribute name.
   - To remove an attribute mapping, click to select it and then click Remove.

Add an Attribute

2. When you are finished making entries or changes, click OK.

The attributes are added to or changed in the database.
If you added a new database, the database is added to the Databases list with its checkbox.

**Finger Database**

Finger is an Internet directory service similar to Ph.

**To add a new Finger database**

1. In the Protocols list, click the **Finger** protocol to select it.

2. Click **New Database**. Or, just double-click **Finger** in the Protocols list.

   *The New Database window, General panel, appears.*

3. Finger Database window, General panel
4. In the General panel, enter a descriptive name for the server, the Host Name or IP address of the server, and the Port in the respective fields. The default port for Ph is 79. Don’t change this port number unless you know for certain that the port number is not 79.

5. To create the new Finger database, click **OK**.  

   *A Finger database is created.*

**LDAP Database**

LDAP means Lightweight Directory Access Protocol. An LDAP server is a service that provides information about individuals. You can look up virtually anyone on the Internet using public LDAP servers. And furthermore, you can add new LDAP servers to query in Eudora.

**To add a new LDAP database**

1. In the Protocols list, click the **LDAP** protocol to select it.

2. Click **New Database**. Or, just double-click **LDAP** in the Protocols list.

   *The New Database window, Network panel, appears.*

**LDAP Database window, Network panel**

3. In the Network panel, enter a descriptive name for the server, the Host Name or IP address of the server, and the Port number in the respective fields. If you select the **This server requires me to log on** option, new fields appear in which to enter an Account name and a Password. However, most LDAP servers do not require you to log in. Enter values in these fields if you have specific instructions from your LDAP administrator to do so.
4. Select the **Attributes** tab to display the Attributes panel.

**LDAP Database, Attributes panel**

1. In the Attributes panel, you can add, edit, or remove attribute mappings using the buttons displayed just below the window. You use the Attribute list to manage how information appears in the query results list and query results details portion of the screen.

2. To add an attribute mapping, click **Add**.

   *The Add Attribute list appears.*

   **LDAP Database window, Attributes panel, Add Attribute**

3. In the **Attribute Name** text box, enter the name for the attribute you wish to add a mapping for, for example, *cn* for common name. You must know the raw field names for the particular LDAP server you are adding.
Listed are the most common raw LDAP field name attributes.

**c** — Country, expressed in a two-letter country code, for example US (United States), CA (Canada), UK (United Kingdom), FR (France), etc.

**st** — State or province, expressed in a two-letter state code, for example, California (CA), Massachusetts (MA), Ontario (ON), etc. Also, if a country is considered a “state,” for example, France, then this field can show a city name, such as Paris.

**l** — Location, that is a city, county, etc., for example San Diego, Montreal, London, Paris, etc.

**mail** — Person’s email address. More than one email address may be listed, and more than one search listing may be returned for an individual with multiple email addresses.

**gn** — Also Givenname. The person’s first name and/or middle initial, or any part of the person’s name before the last name, for example, John W, A Raymond, etc. Titles are sometimes given, such as Dr., Ms., etc.

**sn** — Person’s surname or last name. Suffixes are sometimes given, such as Jr., III, M.D., Esq., etc.

**cn** — Person’s common name. This includes the given name: first, middle initial, prefix and the person’s last name including suffixes.

**o** — Organization, which includes companies, universities, non-profit organizations, government agencies, etc.

4. In the *Presented As* text box, enter the text for the attribute you wish to see displayed on the query results list, or click the down arrow to display some common attribute names.

**NOTE:** Three of the four columns in the query results list window can be assigned to any attribute you wish, but you cannot change the name of the column heading. To change the attribute that is assigned to each column, enter an attribute in the Attribute Name field, such as, cn, sn, gn, etc. Then select either Name, Email(w), or Phone(w) in the *Present As* list, which corresponds to the Name, Email, and Phone columns in the Results List. You cannot change what appears in the *Database* column. It always contains the name of the server where the data was found.

For example, if you want to display “cn” in the *Name* column, “Telephone Number” in the *Phone* column, and “mail” in the *Email* column, you would set up the attributes like this.
Using Directory Services

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Present As (from drop-down list)</th>
</tr>
</thead>
<tbody>
<tr>
<td>cn</td>
<td>Name</td>
</tr>
<tr>
<td>Telephone</td>
<td>NumberPhone(w)</td>
</tr>
<tr>
<td>mail</td>
<td>Email(w) tribute Name</td>
</tr>
</tbody>
</table>

In the Details portion of the Results window, you can assign more readable attribute names.

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Present As (from drop-down list)</th>
</tr>
</thead>
<tbody>
<tr>
<td>l</td>
<td>Location</td>
</tr>
<tr>
<td>st</td>
<td>State</td>
</tr>
</tbody>
</table>

If you were to assign the names above, “State:Texas” would display instead of “St:Texas.”

In the attribute list, check the **only display these attributes** box if you want to limit what appears to only those attributes that are mapped.

**NOTE:** In the Present As drop down list, there is a choice called **Not Displayed**. If you choose **Not Displayed**, you can prevent a particular attribute from being displayed. For example, mapping the **c** (country) attribute to **Not Displayed** will have **c** removed from the displayed results in the Details List. This is useful if there is an usually long or confusing attribute you don’t want to display in the window.

5. Select the **Search Options** tab to display the Search Options panel.

**LDAP Database window, Search Options panel**
6. On the **Search Options** panel, specify the **Search timeout** by moving the bar indicator. You can adjust the bar indicator for a short to long timeout.

7. In the **Maximum number of matches to return** text box, you can select the up arrow to increase or the down arrow to decrease the number of matches you’d like to see displayed. Or select the **No Limit** option to specify unlimited matches.

8. In the **Search Base** text box, you can specify a part of the LDAP server to limit your search. See your LDAP administrator to specify the value in this field. However, the default is usually sufficient.

9. In the **Worldwise Search Filter**, you enter a type of search filter to form word queries. \(cn=*^0*\) is the default. The \(^0\) is substituted for each word to form a set of word queries. The purpose of this filter is to form a term for a word and then (AND) the terms together. Examples appear below.

**Query:** John Smith

**Configuration:** default \((cn=*^0*)\)

**Filter:**

\[(\& (cn="John"))(cn="Smith") )\]

Records in which “cn” attributes contain “john” and “smith” are returned. Using the wildcard asterisks (*) before and after “john” and “smith” would return matches such as “Johnathon Smithson.” If you wish to search whole words, remove the wildcard asterisks. The above example would also return records such as "John Dean Smith" and "Smithers Johnson."

**Query:** John Smith

**Configuration:** \(( l (cn=*^0*)(sn=*^0*)(gn=*^0*)(givenname=*^0*))\)

**Filter:**

\[
(\&
 (l(givenname="John"))(cn="John") (sn="John") (gn="John")

( l(givenname="Smith"))(cn="Smith") (sn="Smith") (gn="Smith")
)
\]

The default search filter in this example would possibly return more records than the default because it searches more fields for a substring match of the word.

10. In the **Whole-query Search Filter**, you enter a type of search filter to create a term for the whole query. You can set this filter as an alternate (OR) for the worldwise search filter results. Examples appear below.

**Query:** John Smith: whole query search filter
**Configuration:**
whole word \((cn=*^0*)\)
word-wise \((l(cn=*^0*)(sn=*^0*)(gn=*^0*)(givenname=*^0*))\)

**Filter:**
\[
\begin{align*}
| & \\
& (cn=*John \text{ Smith}*) \\
& \&
\end{align*}
\]
\[
\begin{align*}
& (|(givenname=*John*) \& cn=*John*) \& (sn=*John*) \& (gn=*John*) \\
& \&
\end{align*}
\]
\[
\begin{align*}
& (|(givenname=*Smith*) \& cn=*Smith*) \& (sn=*Smith*) \& (gn=*Smith*) \\
& \&
\end{align*}
\]

11. Select the Log tab to display the Log panel.

**LDAP Database window, Log panel**

![LDAP Database window, Log panel](image)

12. In the Log panel, specify whether you want to generate log files and if so, how to store them; specify whether you want to enable logs for Protocol interactions and/or a Configuration data load/store.

13. Enter a **Log file name** or select one using the Browse button. And if you want new logs to replace the old ones, select the **Overwrite existing log file** option.

14. When all your information is entered in the New Database window, click **OK**.

*A new LDAP database is created with its checkbox.*

**Modifying a Database**

You can modify any Ph, Finger, or LDAP database in your Databases list.
NOTE: You cannot modify a Eudora Address Book database from the Directory Services window, but you can view the path where the file is stored. Nickname files must be modified from the Address Book. See Using the Address Book on page 233 for more details.

**To modify an existing database**

**NOTE:** You can only modify one database at a time. Multiple selections disable the modify feature.

1. Click the database name or icon in the Databases list to select it.

2. Click Modify. Or, just double-click the database in the list.

   *The Modify Database window appears with its text boxes containing information from the selected database.*

3. In the Modify Database window, make your changes.

4. To save the changes and close the window, click **OK**, or click **Apply**, save the changes and leave the window open. You can then make additional changes and save or discard them.

The Modify Database window will differ depending on the protocol you’ve selected. For details on the fields of the different dialogs, see Adding a New Database (Server) on page 265.

**NOTE:** If you attempt to modify a Eudora Address Book database, the Modify Database window merely displays the path where the address book file is stored.

**Deleting a Database**

**To delete a database**

1. Click the database name or icon in the Databases list to highlight the item

2. Click **Delete**. You are prompted to confirm the delete. Click **Yes** and the database is removed from the list. Click **No** and the deletion is cancelled, and the database remains.

You can delete multiple databases at once; use the Shift key to select a range in the list, or use the Ctrl key to select items non-consecutively.
Using Menu Commands

This section describes Eudora’s menu commands. Each menu is illustrated, and each command is described. Additional commands are available by pressing the Shift key while choosing menu commands.

If there is a shortcut to the menu command, it appears to the right of the command on each menu. Just press Ctrl and the appropriate keyboard character to access that command.

File Menu

This menu provides basic file and mail functions.

**File Menu**

<table>
<thead>
<tr>
<th>Command</th>
<th>Keyboard Shortcut</th>

</tbody>
</table>

**New File**—Create a new text file.

**Open File...**—Open an existing text file.

**Open Attachment**—Open the attachment on the cursor line (Shortcut: Enter).
Close—Close the current window.  
[Shift] Close—Close all windows.  

Save—Save the changes to the topmost window.  
[Shift] Save—Save the changes to all open windows.  

Save As...—Save the current message(s) to a text file.  

Save As Stationery—(Sponsored and Paid modes only) Save the current message to a stationery file. (Stationery files have the .sta extension and, by default, are saved in your Stationery directory.)  

Send Queued Messages—Send all messages that have been queued for delivery.  
[Shift] Send Queued Messages—Display the Mail Transfer Options dialog box.  

Check Mail—Pick up new mail from the incoming mail server (POP or IMAP).  
[Shift] Check Mail—Display the Mail Transfer Options dialog box.  

Print Setup...—Display the Print Setup window, where you can set the printing options.  

Print Preview—Display the Print Preview window, giving a preview of how the current item(s) to be printed will look when printed.  

Print...—Print the current message(s) or window.  

Print One—Sends the item immediately to the printer. One copy of the item is printed.  

Import —Display the Import Mail & Addresses dialog box to import your messages and address book from Netscape Messenger 4.0 or Microsoft’s Outlook ‘98 and Express 5.0.  

Exit—Exit (quit) the Eudora application.
Edit Menu

This menu provides text editing tools.

**Edit menu**

</table>

**Undo**—Reverse the most recent action taken. (In the example above, the last action was typing.) You can undo the last 50 actions in reverse order.

**Redo**—Redo the most recent action that was undone with the Undo command. You can redo up to the last 50 actions (depending on how many were undone).

**Cut**—Delete the selected text and place it on the clipboard.

**Copy**—Copy the selected text and place it on the clipboard.

**Paste**—Paste the contents of the clipboard.

**Paste Special**—Paste copied text as unformatted, Rich Text Format (RTF), Eudora standard, or Hyper Text Markup Language (HTML) text
**Paste As Quotation**—Paste the contents of the clipboard as quoted text. Preceding each line of text is a quote character, which is a right angle-bracket (>) if there are no styles, or an “excerpt bar” (|) if there are styles.

**Clear**—Delete the selected text.

**Text**—Apply text styles to the selected text or paragraph. Includes such commands as **Typewriter** (fixed-width font), **Bulleted List**, **Clear Formatting** (remove all styles), and **Make Hyperlink** (create a clickable link from a piece of text, or an embedded graphic to a URL).

**Insert**—Insert objects in the body of a composition message. Includes the commands **Picture...** (insert an embedded graphic file), **Downloadable Picture...** (inserts a link to a graphic URL), and **Horizontal Line** (insert a horizontal rule as a separator).

**Insert Emoticon**—Insert a smiley or other graphical depiction of your emotions into the text of your message.

**Select All**—Select the entire contents of a message or a mailbox.

**Wrap Selection**—Insert carriage returns into the selection, as appropriate.

**Finish Address Book Entry** (Sponsored and Paid modes only)—Complete the partial text of a nickname.

**Insert Recipient**—Insert the chosen recipient. (The submenu lists the recipients on your Quick Recipient List.)

**Find**—Search for the designated character string.

**Sort**—Sort the message summaries in ascending order in a mailbox by the selected column. **[Shift] Sort**—Sort the message summaries in descending order by the selected column.

**Check Spelling** (Sponsored and Paid modes only)—Perform a spelling check on the entire message or the selected text (displays the Check Spelling dialog box). **[Shift] Check Spelling**—Perform an inline spelling check on the entire message or the selected text (highlights misspelled words in red double-underline: right-click a highlighted word to correct the spelling).

**Message Plug-ins**—Launch the installed message plug-in, as appropriate. See **Plug-ins** (Extended Messaging Services) on page 407 for more details.
Mailbox Menu

This menu lets you open a mailbox or bring an open mailbox to the front. It also lets you create new mailboxes and mail folders.

**Mailbox menu**

<table>
<thead>
<tr>
<th>Mailbox</th>
<th>Message</th>
<th>Trash</th>
</tr>

**In**—Open the mailbox where incoming messages are stored until deleted or transferred to another mailbox.

**Out**—Open the mailbox where messages you compose are stored, where queued messages are held until actually sent, and where copies of sent messages may be initially stored.

**Junk**—Open the junk mailbox, where junk mail is stored automatically for Paid mode customers with SPAMWatch turned on.

**Trash**—Open the mailbox where deleted messages are stored.

**Recent**—Select to open a recently used mailbox.

**New...**—Display the New Mailbox dialog box to create a new mailbox.

*[Your Mailboxes]*—Open the selected mailbox that you have created, or create a new mailbox in a folder that you have created. Below the New... command on the Mailbox menu, all of your top-level mailboxes are listed, followed by all of your top-level mail folders. (Mail folders can contain other mail folders as well as mailboxes.) Navigate through the menu system to open a mailbox that resides within a folder, or to create a new mailbox within that folder, using the New command on the folder submenu.

Message Menu

This menu lets you create, send, and delete messages.
NOTE: If you hold down the Shift key while selecting any of the message composition commands in the top half of the Message menu — from New Message down to and including Redirect To — the Message Options dialog box appears, which lets you select the Personality and optional Stationery for the message.

</tbody>
</table>

**New Message**—Open a new message composition window.

**Reply**—Reply to the sender of the current message.

**Reply to All**—Reply to the sender and all original recipients of the current message.

**Forward**—Forward the current message to someone else.

**Redirect**—Redirect the current message to someone else.

**Send Again**—Resend a message rejected by the mail system. You can also use this command to resend saved or copied messages to avoid retyping message body text or message header text. However, if you try to resend a received message with an attachment. The attachment is not included in the newly sent message.

**New Message To**—Send a message to someone on your Quick Recipient List.
Forward To—Forward a message to someone on your Quick Recipient List.

Redirect To—Redirect a message to someone on your Quick Recipient List.

New Message With—Open a new message window with the selected stationery.

Reply With—Open a reply message with the selected stationery. Reply to the sender of the message only.

Reply to All With—Open a reply message with the selected stationery. Reply to the sender and all original recipients of the message.

Send File or Attach file—Attach a file to the current message or a new message, respectively.

Attach—Use an attachment plug-in to create and attach a special file to the current message or a new message. Example: A QUALCOMM PureVoice voice-message attachment. See Plug-ins (Extended Messaging Services) on page 407.

Send Immediately or Queue For Delivery—Send the message right now, or put it in the queue to be sent the next time queued messages are sent depending on whether Immediate send is selected in the Sending Mail options. See Sending Mail on page 302.

Change—Change the queuing, status, priority, label, server status, or personality of the selected messages or current message.

Changing the personality changes the associated stationery and signature.

Junk—Transfer a message to the Junk mailbox.

Not Junk—Filter a message out of the Junk mailbox into its designated mailbox.

Delete—Transfer the current message into the Trash mailbox (POP server), or mark the message for deletion (IMAP server).

UnDelete—Unmark the message for deletion (IMAP server only).

Purge Messages—Remove all messages marked for deletion (IMAP server only). Removes these messages from both your PC and the IMAP server.
Transfer Menu

This menu lets you transfer the current message(s) to another mailbox, either an existing mailbox or a new mailbox that you create.

**NOTE:** Holding down the Shift key while selecting any of the items on the Transfer menu transfers a copy of the current message(s) to the selected mailbox and leaves the original messages where they are.

**Transfer menu**

- **In**—Transfer the current message(s) to the In mailbox.
- **Out**—Transfer the current message(s) to the Out mailbox.
- **Junk**—Transfer the current message(s) to the Junk mailbox. (Does not train Junk scoring)
- **Trash**—Transfer the current message(s) to the Trash mailbox.
- **Recent**—Transfer the current message(s) to a recently used mailbox of your choice.
- **New...**—Display the New Mailbox dialog box to create a new mailbox and transfer the current message(s) into that mailbox, all in one step. You can specify to create the mailbox only, and not transfer the messages.
- **[Your Mailboxes]**—Transfer the current message(s) into the selected mailbox that you have created, or into a new mailbox that you create. Below the New command on the Transfer menu, all of your top-level mailboxes are listed, followed by all of your top-level mail folders. (Mail folders can contain other mail folders as well as mailboxes.) Navigate through the menu system to transfer the current message(s) to a mailbox that resides within a folder, or to create a new mailbox within that folder and transfer the current message(s) into that mailbox, all in one step, using the New command on the folder submenu.
Special Menu

This menu lets you use additional Eudora functions.

**Special menu**

<table>
<thead>
<tr>
<th>Special</th>
<th>Tools</th>
<th>Window</th>
<th>Help</th>
</tr>
</thead>
<tbody>
<tr>
<td>Filter Messages</td>

<td></td>
</tr>
<tr>
<td>Make Address Book Entry...</td>
<td>Ctrl+K</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Add as Recipient**

**Remove Recipient**

**Empty Trash**

**Compact Mailboxes**

**Filter Messages**—Filter the open message or the selected message(s) against all the manual filters in your Filters list. Useful for filtering messages *after* you have received them, especially after creating new filters.

**Make Filter**—Open the Make Filter dialog box to create a simple transfer filter based on information in the open message or the selected message(s).

**Make Address Book Entry...**—Create an Address Book entry from the current message, the Address Book, or the Directory Services window.

**Add as Recipient**—Add the selected text, usually a full email address, to your Quick Recipient List.

**Remove Recipient**—Select a recipient from this submenu to remove the recipient from your Quick Recipient List.

**Empty Trash**—Delete all messages from the Trash mailbox. As a result of this action, these messages are completely removed from your computer.

**Compact Mailboxes**—Reclaim unused space in all mailboxes.
Forget Password(s)—Make Eudora forget your passwords, so that next time mail is checked for one of your password-controlled mail accounts, the password must be entered first. Useful if you step away from your desk in a non-secure area.

Message Plug-ins Settings...—Open the Installed Message Plug-ins dialog box, which lets you set the options for those installed message plug-ins that have settable options. In the open Installed Message Plug-ins dialog box, click the desired plug-in (scroll through the list if necessary) and then click the Settings... button, which will only be available if the plug-in has settings. In the displayed Plug-in Settings dialog box, set the options you want and click OK to save your changes and close the dialog box. When you are finished setting your plug-in options from the Installed Message Plug-ins dialog box, click the Close button to close the dialog box. Example: QUALCOMM’s PureVoice voice-messaging plug-in gives you the option to begin recording automatically, as soon as you launch the plug-in. See Plug-ins (Extended Messaging Services) on page 407 for more information.

Tools Menu

All of Eudora's tool windows and the options dialog boxes can be opened from this menu, as well as the Options dialog box. Select a tool window name to open that window, or select Options... to open the Options window and set your options.

**Tools menu**

Using Menu Commands

Filters—Display the Filters window, which lets you create, modify, and remove message filters.

Filter Report—Display the Filter Report window, which provides a report of all filter operations (transfers to mailboxes) since the last time Eudora was opened. Note: For these filter reports to be generated, you must turn on the Generate filter report option in the Getting Attention options. See Getting Attention on page 334. This option is turned off by default.

Mailboxes—Display the Mailboxes window, which lets you manage your mailboxes and mail folders.

File Browser—Display the File Browser window, which lets you browse through your desktop and drag attachments to new messages and otherwise (partially) manage your files and folders. The File Browser window is not a full replica of MS Windows Explorer.

Stationery ( Sponsored and Paid modes only)—Display the Stationery window, which lets you create, manage, and apply your stationery files. See Using Stationery (Sponsored and Paid modes only) on page 109.

Signatures—Display the Signature window, which lets you create, manage, and apply your signatures. See Using a Signature on page 105.

Personalities (Sponsored and Paid modes only)—Display the Personalities window, which lets you create, modify, manage, and apply your personalities. See Using Multiple Personalities (Sponsored and Paid modes only) on page 115.

Task Status—Display the Task Status window, which lets you see Eudora checking mail for and sending mail from each of your personalities simultaneously.

Task Error—Display the Task Error window, which lets you see a detail summary of any error that may occur while in Eudora.

Address Book—Display the Address Book window, which lets you create, manage, and apply entries that contain nicknames (shorthand names for groups of email addresses) and associated information. In the Address Book window, you can also create multiple Address Book files for storing nickname entries. Nicknames provide a quick and convenient way to address e-mail, especially to multiple recipients and to people you correspond with frequently. See Using the Address Book on page 233.
**Directory Services**—Display the Directory Services window, which lets you look up people on the Internet, on your local network (e.g., within your organization), or in your Eudora Address Book(s). The Directory Services window is similar to an Internet “White Pages.” See Using Directory Services on page 257.

**Link History** (Sponsored and Paid modes only)—Display the Link History window, which displays active links you have received in Eudora (including ads if you are using Eudora in the Sponsored mode). You can activate the link and view its information in this window. See Link History (Sponsored and Paid modes only) on page 228.

**Statistics** (Sponsored and Paid modes only)—Display the Statistics window, which displays your Eudora usage by day, week, month, or year.

**Reset Tools**—Reset the toolbar and windows positions back to the default. A dialog will appear asking you to confirm that this is what you would like to do.

**ESP Groups** (Sponsored and Paid modes only)—Display the ESP Groups window to create and maintain ESP groups. See Eudora Sharing Protocol on page 369.

**Options**—Display the Options windows, which lets you set preferences for a variety of categories in Eudora. In the open Options window, click a category in the category list, then set the options for that category. Click OK to save your changes and close the window. You can make changes in multiple categories before clicking OK. See Setting Eudora Preferences on page 292 for descriptions of all the options in all categories.

**Window Menu**

All of Microsoft Windows’ standard Window menu options are listed in this menu including the names of all normal Eudora windows that you currently have open (tabbed window groups are listed by the currently active window in the tabbed group). Note that this menu does not apply to docked or floating Eudora windows. See Managing Windows in Eudora on page 197 for more information on normal, docked, floating, and tabbed windows.
**Window menu**

<table>
<thead>
<tr>
<th>Window</th>
<th>Help</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cascade</td>
<td>Shift+F5</td>

<tr>
<td>Tile Horizontal</td>
<td>Shift+F1</td>
</tr>
<tr>
<td>Tile Vertical</td>
<td>Ctrl+F5</td>
</tr>
<tr>
<td>Arrange Icons</td>
<td></td>
</tr>
<tr>
<td>Send To Back</td>
<td></td>
</tr>
</tbody>
</table>

**Cascade**—Display all open normal Eudora windows in a cascading fashion (diagonally offset from each other in a stack).

**Tile Horizontal**—Display all open normal Eudora windows in a tiled (edge to edge) fashion with horizontal edges touching (top to bottom).

**Tile Vertical**—Display all open normal Eudora windows in a tiled (edge to edge) fashion with vertical edges touching (left to right).

**Arrange Icons**—Arrange all Eudora window icons, representing minimized normal Eudora windows, in a line at the bottom of the Eudora main window work area. These icons are also represented by buttons on the Eudora taskbar.

**Send To Back**—Send the topmost open normal Eudora window to the back of all displayed windows. A tabbed window group is considered a single window for this purpose.

**[Your Windows]**—All normal Eudora windows that are open appear here. Tabbed windows are represented as single windows, identified by the currently active window in the group. Select the desired window to bring that window (or the tabbed group containing it) to the front of all displayed windows.

**Help Menu**

Go to this menu to get help, read a tip, change mode, register, insert system configuration, or see information about this release.
Using Menu Commands

**Help menu**

<table>
<thead>
<tr>
<th>Help</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topics</td>
</tr>
<tr>
<td>Context Sensitive Help</td>
</tr>
<tr>
<td>Technical Support</td>

<tr>
<td>Tip of the Day</td>
</tr>
<tr>
<td>Payment &amp; Registration</td>
</tr>
<tr>
<td>Insert System Configuration</td>
</tr>
<tr>
<td>About Eudora…</td>
</tr>
</tbody>
</table>

**Topics**—Display the online Help contents.

**Context Sensitive Help**—Display context-sensitive Help. Selecting this command attaches a question mark icon to the mouse pointer. You then click any screen object in Eudora (icon, menu command, text field, etc.), and a Help window appears containing help for that object.

**Technical Support**—Display a Eudora Help window containing information on getting more help and, optionally, contact information for the Eudora Technical Support group. See **Technical Support** on page 27 for more information on how to obtain technical support directly from the Eudora Technical Support group if you are eligible to receive it. If you are eligible for this support, and you complete the registration process, contact information for the Eudora Technical Support group will be displayed in this help window.

**Report A Bug**—Displays a new composition window addressed to Windows Eudora Bugs at Qualcomm. If you are having technical problems with Eudora, just answer the questions in the email message.

**Tip of the Day**—Display the Tip of the Day window.

**Payment & Registration**—Display the Payment and Registration dialog box, which lets you change operating mode and register your copy of Eudora. See **Changing Eudora Modes** on page 25 and **Registering Eudora** on page 27 for registration instructions.

**Insert System Configuration**—Insert text containing detailed information about your system configuration into the message body of a new composition message. Eudora-related configuration files may also be attached to the composition message when you select this command. Use this feature when reporting bugs or when corresponding with the Eudora Technical Support group.
About Eudora...—Display the About Eudora screen, which contains information on this release, a link to the Eudora web site, and developer and support team credits. It also displays your registration number and name.
Setting Eudora Preferences

To display category windows where you can specify how you want to use Eudora, select Options from the Tools menu. By selecting or turning off criteria on these windows, you customize Eudora to suit your needs.

The many Options categories are described in this section. When you first install Eudora, the Options windows contain preset settings.

After you totally finished changing the settings in all categories, click OK. Your settings will be changed.

NOTE: For your convenience, some options appear in more than one category. For example, your return address appears in both the Getting Started options window and the Sending Mail options window. Changing an option in one category changes the option in all categories in which it appears.

For advanced users only: if you need to use an Esoteric Settings plug-in, copy esoteric.epi from the Extra stuff subdirectory into your main Eudora directory. This will allow an interface to several features in your options settings. You will notice additional icons appearing at the end of the category list in Options.
Getting Started

On the Getting Started options window, you can determine the minimum information necessary to send and receive mail. The information here is for your “dominant” personality, which is your principal email account.

To display the Getting Started options window

1. From the Tools menu, choose **Options**.
2. Click the **Getting Started** icon.

*The Getting Started options window appears.*

Getting Started options window

Select the options you want to change. Following are the descriptions of the options:

**Real name**—This is the real name assigned to your principal account, generally your first and last name. The text you enter here is included in the From: field of all your outgoing messages from this account. It identifies you to your recipients.
Email address—This is the email address used in outgoing messages and recipients’ replies, if this address is different from your incoming mail account. The address you enter here is included in the From: field of all your outgoing messages from this account, and when a recipient replies to a message from this account, the reply is sent to this address. If you do not enter an address in this field, Eudora uses your incoming mail account as the return address. Incoming mail accounts are usually of the form username@incomingmailserver. For example, suppose your incoming mail account is jcamp@pop.myfirm.com but your email address is jcamp@myfirm.com. This is slightly different. You would then enter jcamp@myfirm.com in this field.

NOTE: If you do enter an address in the Email Address field, first test the address to be sure that mail sent to it is indeed delivered to you. If you use an invalid email address, no one will be able to reply to your mail.

Mail Server (Incoming)—This is the name of the incoming-mail server for your principal email account. All incoming messages to your primary account are routed through this server. Use the Incoming Mail options window to specify whether this server uses POP (Post Office Protocol) or IMAP (Internet Message Access Protocol). A sample server name might be pop.myfirm.com.

User Name—This is the name you use to log in to your primary email account for accounts that require a user login. For example, in the incoming mail account jcamp@pop.myfirm.com, the user name is jcamp. All accounts require a user name.

SMTP server (outgoing)—This is the name of the outgoing mail server for your principal email account. All outgoing messages sent from your primary account are routed through this server. If the computer that your primary incoming mail account is selected also runs an SMTP server, you can leave this field blank. SMTP stands for Simple Mail Transfer Protocol.

Allow Authentication—Eudora can log in to an SMTP server when sending mail, just like it does for receiving mail. Not all SMTP servers require or allow such authentication. Eudora will attempt authentication to servers that allow it. The preferred SMTP authentication method is CRAM-MD5. If CRAM-MD5 is not available, LOGIN or PLAIN will automatically be used. See Using SMTP Authentication on page 72.
Setting Eudora Preferences

Checking Mail

The Checking Mail options determine how Eudora checks for and receives incoming mail messages sent to your principal email account (dominant personality).

To display the Checking Mail options window

1. From the Tools menu, choose Options.
2. Click the Checking Mail icon.

The Checking Mail options window appears.

Select the options you want to change. Following are the descriptions of the options:

Mail Server—This is the name of your incoming-mail server as entered in the Mail Server (Incoming) field of the Getting Started options. See Getting Started on page 293 for more details.

User Name—This is the login name you entered in the User Name field of the Getting Started options. See Getting Started on page 293 for more details.
Setting Eudora Preferences

Check for mail every _ minute(s)—If you enter a number greater than zero in this field, then at regular intervals, Eudora automatically checks your incoming mail server for new mail and transfers to your PC any mail addressed to your primary account. The number you enter here specifies the number of minutes between automatic mail-checks. It’s a good idea to set this at no less than 15 minutes. Checking mail more frequently may overwork your incoming mail server. This option only works when Eudora is running. Entering 0 in this field turns off automatic mail-checking.

Don’t check without a network connection—If you select this option, Eudora will not attempt to retrieve mail unless you are connected to a network.

Don’t check when using battery—If you select this option and your PC is running on battery power, mail is not automatically checked even if automatic mail-checking is selected; that is, the Check for mail every _ minute(s) field has a number greater than zero in it.

Send on check—If you select this option, any messages that are queued in the Out mailbox are sent when a mail-check is performed, whether the mail-check is automatic or manual. If this is turned off, messages queued in the Out box are not sent during a mail check.

Secure Sockets when Receiving—Use the drop-down menu to choose a SSL security setting for your dominant personality when receiving messages.

Following is a description of each option on the SSL drop-down menu:

Never—Do not use SSL for server authentication and mail transfer security, even if SSL is available on the server.

If Available STARTTLS (default)—Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL, that is, if the server supports STARTTLS. If your server doesn’t support STARTTLS, mail transfers will occur successfully, but they will not be secured with SSL.

Required, Alternate Port—Use SSL for server authentication and mail transfer security by having Eudora automatically use the older style alternate port method for starting SSL. If your server does not support SSL on the appropriate ports, mail transfers will fail.

Required STARTTLS—Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL. If your server does not support STARTTLS, mail transfers will fail.
NOTE: If you use SSL and cannot make a connection when receiving or sending mail, you may need to check with your ISP to update any invalid SSL certificates. However, to override any issues with SSL when retrieving or sending mail, choose Never from the drop-down menu to make a successful connection.

Last SSL Info— Click to display the most current information for an SSL connection between a server and Eudora since the last time you started Eudora. The Eudora SSL Connection Information Manager window appears with SSL and certificate information.

WARNING: If you display the SSL information windows, make certain you don’t change any of the field information unless you are familiar with SSL.
Incoming Mail

The Incoming Mail options determine how Eudora receives incoming messages addressed to your primary email account (dominant personality). The options configure the incoming mail server name that is entered in the Mail Server (Incoming) field in the Getting Started options window.

To display the Incoming Mail options window

1. From the Tools menu, choose Options.
2. Click the Incoming Mail icon.

The Incoming Mail options window appears.

Following are field descriptions for Incoming Mail:

Server configuration—Specify which email protocol the incoming mail server uses: POP (Post Office Protocol) or IMAP (Internet Message Access Protocol). If you are not sure which server to use, ask your email administrator.

The options in the rest of this window depend on whether you’ve chosen POP or IMAP in this field. Options for both configurations are described below.
When Server configuration = POP:

**Incoming Mail options window (POP)**

- **Leave mail on server**—If you select this option, Eudora copies incoming messages to your PC and leaves the message on the POP server. If this is turned off, Eudora transfers incoming messages to your PC and deletes the message from the POP server. For important information concerning this option, see Leaving Mail on the Server on page 86.

- **Delete from server after _ day(s)**—If you select this option, mail will be saved for the number of days you specify before being deleted from the POP server. It is a good idea not to leave copies of your messages on the POP server indefinitely, as this will create mail storage problems on the server.

- **Delete from server when emptied from Trash**—If you select this option, any messages that are deleted from your Trash mailbox are also deleted from the POP server.

- **Skip messages over _ K in size**—If you select this option, messages over the specified size are downloaded only in part. These messages include the first few lines and a statement that says the message is not complete. This can be useful on slow connections.

**NOTE:** If you want to retrieve the full message after it has been partially retrieved, right-click on the message and change the server status.
Offline—If you select this option, Eudora won’t attempt to make any connections. This is a good option to have selected if you’re using Eudora on a laptop computer that is not continuously connected.

Authentication style—This specifies which POP account authentication technology to use for this account: Passwords, Kerberos, APOP, or RPA. Ask your email administrator which one to use if you are not sure. Use RPA for CompuServe.

Server configuration = IMAP:

Incoming Mail options window (IMAP)

IMAP Mailbox Location Prefix—This specifies the mailbox location prefix that IMAP will use when locating your mailboxes on the incoming mail server. An example prefix is /usr/mail. Ask your email administrator what to enter here if you are not sure.

For new mail, download—These options (you must choose one) let you control the way incoming mail is downloaded from the IMAP server.

Minimal headers only—If you select this option, only a limited set of message headers, and nothing else, is downloaded for each incoming message. (That means the remaining message headers, the message body, and any attachments are not initially retrieved for the message.) By accessing each part of the message, you can retrieve the remaining portion from the server.
Setting Eudora Preferences

**Full message except attachments over _ K**—If you select this option, the full message (full set of message headers and the message body) and any attachments smaller than the specified size are downloaded for each incoming message. Also, any attachments larger than the specified size are not downloaded with the message. To download all of your IMAP attachments, enter a large number in this field. If you enter 0 in the text box, all attachments regardless of size are retrieved.

**When I delete a message**—These options (you must choose one) let you control the way you want your deleted messages handled.

- **Mark it as deleted**—Select this option to mark your messages on the IMAP for deletion. These messages are not removed from the server until you choose to remove them. See Deleting a Message from the Server on page 88.

- **Move it to (mailbox)**—Select this option to move your deleted messages to a specific mailbox. The default is your Trash mailbox.

**Authentication style**—This specifies which IMAP account authentication technology to use for this account: Passwords, Kerberos, or CRAM-MD5. Ask your email administrator which one to use if you are not sure. CRAM-MD5 is the default. If CRAM-MD5 is not detected, Eudora will use Passwords.
Sending Mail

The Sending Mail options determine how Eudora sends your outgoing messages from your primary email account (dominant personality).

To display the Sending Mail options window

1. From the Tools menu, choose Options.
2. Click the Sending Mail icon.

The Sending Mail options window appears.

Select the options you want to change. Following are the descriptions of the options:

Email address—This is your return email address, if different from your incoming mail account. See Getting Started on page 293 for more details.

Domain to add to unqualified addresses—This is the domain name that Eudora automatically adds to an unqualified address in messages sent from your primary account. An unqualified address is an address that doesn't have the @ sign followed by a domain name. This can be used to save time when addressing large numbers of messages to users in the same domain.
Setting Eudora Preferences

**SMTP server**—This is the name of the outgoing mail server for your principal email account. All outgoing messages sent from your primary account are routed through this server. If the computer that your primary incoming mail account is on also runs an SMTP server, you can leave this field blank. SMTP stands for Simple Mail Transfer Protocol.

**SMTP Relay Personality**—Choose the personality from the drop-down list that you previously set up as your SMTP Relay. This feature allows you to send all your mail through your primary ISP’s server.

**Allow authentication**—Eudora can log in to an SMTP server when sending mail, just like it does for receiving mail. Not all SMTP servers require or allow such authentication. Eudora will attempt authentication to servers that allow it. The preferred SMTP authentication method is CRAM-MD5. If CRAM-MD5 is not available, LOGIN or PLAIN will automatically be used.

**Immediate send**—If you select this option, the rightmost button in the toolbar of the message composition window is labeled Send. Clicking this button immediately sends the message to the SMTP server. If this option is turned off, the button is labeled Queue and clicking on it places the message in the Out mailbox marked ready for delivery (Q).

**Send on check**—If you select this option, any messages from your primary account that are queued in the Out mailbox are sent when mail is checked for this account, whether the mail-check is automatic or manual.

**Use Submission Port**—If you select this option, when sending mail, Eudora will connect to the outgoing mail server on the new ‘submission’ port 587 instead of the old SMTP port 25. Using the submission port requires authentication to be turned on.

**Secure Sockets when Sending**—Use the drop-down menu to choose a SSL security setting for your dominant personality when sending messages.

Following is a description of each option on the SSL drop-down menu:

- **Never**—Do not use SSL for server authentication and mail transfer security, even if SSL is available on the server.

- **If Available STARTTLS (default)**—Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL, that is, if the server supports STARTTLS. If your server doesn’t support STARTTLS, mail transfers will occur successfully, but they will not be secured with SSL.
Required, Alternate Port—Use SSL for server authentication and mail transfer security by having Eudora automatically use the older style alternate port method for starting SSL. If your server does not support SSL on the appropriate ports, mail transfers will fail.

Required STARTTLS—Use SSL for server authentication and mail transfer security by having Eudora automatically invoke the STARTTLS command method to start SSL. If your server does not support STARTTLS, mail transfers will fail.

**NOTE:** If you use SSL and cannot make a connection when receiving or sending mail, you may need to check with your ISP to update any invalid SSL certificates. However, to override any issues with SSL when retrieving or sending mail, choose Never from the drop-down menu to make a successful connection.

Last SSL Info—Click to display the most current information for an SSL connection between a server and Eudora since the last time you started Eudora. The Eudora SSL Connection Information Manager window appears with SSL and certificate information.

**WARNING:** If you display the SSL information windows, make certain you don't change any of the field information unless you are familiar with SSL.
Composing Mail

The Composing Mail options determine what Eudora features are available to you when composing messages.

To display the Composing Mail options window

1. From the Tools menu, choose **Options**.
2. Scroll and click the **Composing Mail** icon.

*The Composing Mail options window appears.*

**Composing Mail options window**

**Default Stationery** (Sponsored and Paid modes only)—This is the default stationery to be used in all outgoing messages from your dominant account. Select a stationery file from the drop-down list, or select <No Default> for no default stationery. If a stationery file is selected, that file is used when you open new messages from this account (except with the Redirect or Send Again commands). The message toolbar in the composition window is set according to how the stationery message was saved, regardless of how the options below are set. But, you can always change them after you open the message. See Creating New Stationery on page 111.
When not using Stationery (Sponsored and Paid modes only)—The values you choose for the following options apply only when you are not using a default stationery file, that is, when the “Select a default Stationery for new messages” option, above, is set to <No Default>, if you have selected a default stationery file from the drop-down list, then the values below are ignored. Instead, Eudora uses their corresponding values that were set when the stationery file was saved. So, for example, if you choose default stationery that uses a custom signature and you set the default signature drop-down list below to your Standard signature, your Standard signature will be ignored and the custom signature will be used.

Word wrap—If you select this option, Eudora automatically inserts carriage returns in long lines when a message is sent, creating roughly 76 characters per line. This makes the message legible on the recipient’s computer. It is a good idea not to include your own carriage returns within paragraphs if you have this option on. Use carriage returns only to create new paragraphs. We strongly recommend that you leave this option selected. The default stationery overrides this option (see above).

Keep copies—If you select this option, a copy of each message you send is kept in the Out mailbox. If this option is turned off, outgoing messages are put in the Trash mailbox after they are sent. Default stationery overrides this option (see above).

May use quoted-printable—If you select this option, Eudora uses quoted-printable encoding when necessary, such as when sending messages that contain special characters or long lines of text. If this option is turned off, quoted-printable encoding is never used. We recommend that you leave this option selected. Default stationery overrides this option.

Tabs in body of message—If you select this option, pressing the Tab key within the message body inserts a tab. If it is turned off, pressing the Tab key within the message body moves the cursor to the To: field. Default stationery overrides this option (see above).

Show signature while composing—If you select this option, you will see the signature you have previously set up in the message composition window. If off, you will not see the signature. To set up a signature, see Using a Signature on page 105.
Setting Eudora Preferences

Internet Dialup

The Internet Dialup options determine how Eudora manages your Internet telephone connection.

**To display the Internet Dialup options window**

1. From the Tools menu, choose *Options*.
2. Click the *Internet Dialup* icon.

The Internet Dialup options window appears.

**Internet Dialup options window**

- **Have Eudora connect using Dial-up networking**—If you select this option, the specified dial-up connection (referred to in Windows NT 4.0 as a "phonebook entry") is used when Eudora does any network operation. This option is available only if you have installed the dial-up networking services with Windows 98/XP or Windows NT 4.0.

- **When Eudora established the connection:**
  - **Hang-up after receiving and sending**—If you select this option, the connection terminates each time mail is retrieved and sent.
  - **Close connection on Exit**—If you select this option, the phone connection terminates when you exit Eudora.

---

Have Eudora connect using Dial-up networking—If you select this option, the specified dial-up connection (referred to in Windows NT 4.0 as a "phonebook entry") is used when Eudora does any network operation. This option is available only if you have installed the dial-up networking services with Windows 98/XP or Windows NT 4.0.

When Eudora established the connection:

**Hang-up after receiving and sending**—If you select this option, the connection terminates each time mail is retrieved and sent.

**Close connection on Exit**—If you select this option, the phone connection terminates when you exit Eudora.
**Entry:**—Use the drop-down list to select a dial-up connection in this field. You must have dial-up networking set up in Windows.

**New**—Select to create a new dial-up networking entry. See the online user manual for information on creating a dial-up networking entry.

**Edit**—Select to edit the current entry displayed in the Entry field box. For example, you would edit phone number.

**Only do automatic mail checks when a network connection is already established**—If you select this option, Eudora will do an automatic mail check only if you are connected to a network.
Repeating

The Repeating options determine how replies are created.

**To display the Repeating options window**

1. From the Tools menu, choose Options.

2. Scroll and click the Repeating icon.

*The Repeating options window appears.*

**Repeating options window**

Select the options you want to change. Following are the descriptions of the options:

**Map Ctrl+R to “Reply to All”**—If you select this option when you hold down the Ctrl key and press R, a new message is created addressed to all of the recipients of the original message as well as the sender.

**Copy original’s priority to reply**—If you select this option, your replies use the same priority as the original message.

**Automatically Fcc to original mailbox** (Sponsored and Paid modes only)—If you select this option, replies are automatically copied to the same mailbox that contains the original message with the exception of the In box replies which are copied to the Out box.
Include signature on reply—If you select this option, your default signature will be included on all of your replies automatically.

Quote only the selected text—If you select this option, only the text you highlight in a received message will appear on the reply message.

Generate multiple messages on Reply to multiple messages—Check this box if you want individual reply messages to be sent to each sender of each concentrated message instead of one message being sent to all the senders.

When replying to all—This specifies how to address a reply. If Include yourself is selected, when you Reply to all as described above, your address is left in the address list of the new message and you receive a copy of your own reply. If this option is turned off, the default, your address is removed from the reply message and you do not receive a copy of the reply.

To determine who you are for the Include yourself option, Eudora uses the “me” nickname. You create the “me” nickname in your Address Book. If you do have a “me” nickname, Eudora uses the contents of the Login Name, Mail Server, and Return Address from the Getting Started options.

If Put original To:recipients in Cc: field is on (the default is off), the addresses of the original message recipients are moved from the To field to the Cc field of the reply-to-all message. Only the address of the original sender is placed in the To field. If this option is off, all of the addresses are placed in the To field of the reply message.
Setting Eudora Preferences

Attachments

The Attachments options determine how Eudora sends and receives file attachments.

**To display the Attachments options window**

1. From the Tools menu, choose **Options**.
2. Scroll and click the **Attachments** icon.

*The Attachments options window appears.*

**Attachments options window**

Select the options you want to change. Following are the descriptions of the options:

**Encoding method**—This specifies what default encoding method to use for attached documents: MIME, BinHex, or Uuencode. To change the method for just the current message, use the Attachment Type popup in the outgoing message window. For details, see *Attaching a File to a Message* on page 49.

**Attachment directory**—This specifies what directory will receive incoming attachments. To specify a folder, single-click the folder name button. A dialog box appears prompting you to select a folder. The default folder is the Attach sub-folder of your Eudora Pro folder.
Setting Eudora Preferences

Put text attachments in body of message—If you select this option, Eudora puts any plain-text attachment you send directly within the message body, as if it were typed in manually.

Receive MIME digest as a mailbox attachment—If you select this option, Eudora automatically creates a mailbox specifically for email messages from a mailing list that supports MIME digests.

Delete attachments when emptying Trash—If you select this option, Eudora automatically deletes an attachment received with a message when that message is deleted from your system; that is, when the message is emptied from the Trash. The attachment must still be in the folder defined as the Attachments Folder. If you want to save an attachment but delete the message, move the attachment to another folder or turn off this option.

Delete automatic attachments—This specifies how to handle attachments to automatically generated messages, such as is created with the “Insert System Configuration” command.

Never—If you select this option, automatic attachments are never deleted from the attachment directory.

After sending message—If you select this option, automatic attachments are deleted from the attachment directory when their corresponding messages are sent.

When message emptied from Trash—If you select this option, automatic attachments are deleted from the attachment directory when their corresponding messages are emptied from the Trash.
Setting Eudora Preferences

Fonts

The Fonts options determine how Eudora displays and prints text. Note that the choices available for each option, and the default, may depend on the fonts installed in your system.

To display the Fonts options window

1. From the Tools menu, choose Options.
2. Scroll and click the Fonts icon.

The Fonts options window appears.

Fonts options window

Select the options you want to change. Following are the descriptions of the options:

Message—These fields list the proportional and fixed-width fonts to be used for displaying the text in your received and composition messages and in the message preview pane in mailbox windows. Also included are the size of each font and the use of proportional or fixed-width font by default.

Proportional—Specify the proportional font to use in message windows and the preview pane. Spacing is adjusted according to each character’s width.

Fixed-width—Specify the fixed-width font to use in message windows and the preview pane. Every character requires the same amount of space.
**Use proportional font by default**—If you select this option, message windows and the preview pane use your specified proportional font by default. If this option is turned off, message windows and the preview pane use your specified fixed-width font by default.

**Size**—Specify the size of the font to be used for text in message windows and the preview pane.

**Printer**—These fields list the font and size to be used when printing any text from Eudora using the **Print...** command messages, text files, signature files, etc.

- **Font**—Specify the font to use when printing text from Eudora.
- **Size**—Specify the font size to use when printing text from Eudora.

**Screen**—These fields list the font and size to be used when displaying any Eudora screen text other than that displayed in received and composition messages and the message preview pane. This includes text files, signature files, and message summaries in mailbox windows.

- **Font**—Specify the font to use when displaying all other screen text in Eudora.
- **Size**—Specify the font size to use when displaying all other screen text in Eudora.
Display

The Display options determine how Eudora displays various objects in the main Eudora window and the category icons in the Options list.

To display the Display options window

1. From the Tools menu, choose Options.
2. Scroll and click the Display icon.

The Display options window appears.

Display options window

Select the options you want to change. Following are the descriptions of the options:

Show toolbar — If you select this option, Eudora displays the main window toolbar.

Show toolbar tips — If you select this option, holding the mouse pointer over a button in the main window toolbar displays a very brief description of that button’s function.

Show cool bars — If you select this option, the main window toolbar buttons have a flat look and only become raised when you position the mouse pointer over the button. If this option is turned off, the main window toolbar buttons always have a raised look.
Setting Eudora Preferences

**Show large buttons**—If you select this option, the main window toolbar buttons appear large.

**Show status bar**—If you select this option, Eudora displays a status bar at the bottom of the main window. The status bar provides a brief description of menu items and toolbar buttons. Also information about background tasks, if running, appears.

**Show category icons**—This option allows you to turn the Category icons in Options on and off.

**Show MDI task bar**—If you select this option, Eudora displays the Eudora taskbar at the bottom of the window work area. This taskbar contains buttons for all open and minimized normal Eudora windows, such as mailboxes, email, and Address Book.

**Automatically download HTML graphics**—If you select this option, Eudora will fetch and display images from the web that are embedded in a received email message using Eudora’s internal HTML viewer.

**Display attached images inline**—If you select this option, Eudora will display attached graphic files within the body of the message.

**Display emoticons as pictures**—If you select this option, Eudora will display emoticons as graphic icons.

**Minimize Eudora to the system tray**—If you select this option, Eudora will display as an icon in the system tray when minimized instead of in the Windows Taskbar.

**Always show icon in system tray**—If you select this option, the icon for Eudora will display in the system tray whenever Eudora is open.
Viewing Mail

The Viewing Mail options determine how Eudora displays incoming and outgoing message windows and the message preview pane in mailbox windows.

To display the Viewing Mail options window

1. From the Tools menu, choose Options.
2. Scroll and click the Viewing Mail icon.

The Viewing Mail options window appears.

Select the options you want to change. Following are the descriptions of the options:

**Message Window**—These options determine how Eudora displays received and composition messages.
Setting Eudora Preferences

**Use Microsoft’s viewer**—If this is turned off, Eudora displays advanced formatting, graphics, and multimedia in incoming and outgoing messages, using its own built-in viewer. If you select this option, Eudora takes full advantage of the Web browser capabilities of Microsoft’s Internet Explorer 3.0 or later by showing Web content right in incoming and outgoing messages or linking to the Internet, without your having to open the Web browser. This option is available only if you have Microsoft’s Internet Explorer version 3.0 or higher installed and available on your system.

**Use separate settings from Internet Explorer**—If this setting is turned on, Eudora will keep its own display settings separate from Internet Explorer. If this is turned off, changes to Eudora display settings will also change the settings in the Internet Explorer browser.

**Message window width**—This specifies the width of new and received message windows (in characters). This option has no effect on what your mail looks like when it is sent. When mail is sent, Eudora wraps at or before 76 columns.

If you use a proportional font, Eudora sets the window width based on the average width of the characters in the font.

**Message window height**—This specifies the height of new and received message windows (in lines).

**NOTE:** If the “Zoom windows when opening” option is selected, received message window heights are automatically adjusted to the height of the message text.

**Preview Pane**—These options determine the visibility and behavior of the message preview pane that appears at the bottom of mailbox windows.

**Show message preview pane**—If you select this option, Eudora displays the message preview pane in mailbox windows. The preview pane previews a single selected message. A splitter between the preview pane and the message summary list lets you resize the preview pane relative to the list.

**Mark previewed messages as read after _ second(s)**—If you select this option and the “Show message preview pane” option is turned on, the message currently selected in the mailbox window and previewed in the preview pane is automatically marked as read (blank in the Status column) after the specified number of seconds. If this option is turned off, a previewed message will not automatically be marked as read. Note: You can use the Shift+Space shortcut to convert a message back and forth between the Unread (✓) and Read status.
**Automatically open next message**—If you select this option, deleting or transferring the current message opens the next message in the mailbox, but only if that message is unread.

**Zoom windows when opening**—If you select this option, new message windows automatically open to their “zoomed” size. The zoomed size is computed on a window-by-window basis. For message windows, zoomed size is just long enough to display all of the message (but no longer than the main window), and as wide as the Message window width setting. Composition windows zoom to the height specified by the Message window height setting.

**Allow executables in HTML content**—If you select this option, you are able to run programs such as Java™ Applets, JavaScript™, VB Script™, and ActiveX™ Controls that are embedded in an HTML message. For security reasons, you may want to leave this option turned off.
Mailboxes

The Mailboxes options determine how Eudora displays various objects in mailbox window columns. It also allows you to configure Eudora to select and drag message(s) for mailbox transfers.

To display the Mailboxes options window

1. From the Tools menu, choose Options.
2. Scroll and click the Mailboxes icon.

The Mailboxes options window appears.

Select the options you want to change. Following are the descriptions of the options:

Show Mailbox Columns—These options determine which columns appear in mailbox windows. Select an option to display that column in all mailbox windows. The options are Status, Junk, Priority, Attachment, Label, Who, Date, Size, Server status, MoodWatch and Subject.

Show mailbox lines—If you select this option, lines appear in the message summaries portion of mailbox windows: horizontal lines to separate message summaries, and vertical lines to separate columns.
Show count of selected messages in Size box—If you select this option, a column is added to the size box in the lower left hand corner of a mailbox table of contents. The first column of the size box will display the number of messages that are selected.

Close messages with mailbox—If you select this option, all opened messages in a mailbox will close automatically when you close the mailbox.

Select newly inserted messages (FUMLUB)—If you select this option, the first message of the most current block of unread messages is highlighted in the Table of Contents window when new messages are added to a mailbox, for example, when receiving new messages as a result of a mail check. FUMLUB means First Unread Message of the Last Unread Block. For example, you may have a series of unread messages in a mailbox scattered throughout your Table of Contents. The first message of the last block of unread messages listed in your Table of Contents is selected.

Show no more than _ items in the Recent mailbox menus [default 10]—Enter the maximum number of mailboxes you would like to see in the Recent mailbox menus. Set this option to 0 to disable the Recent mailbox menus.

When dragging in a mailbox:

Allow drag and drop transfers—If you select this option, you can transfer a message to another mailbox using drag and drop: select one or more messages in a mailbox, drag them to another mailbox, and drop them in the target mailbox. Also, you can drag and drop messages to a mailbox displayed in the Mailboxes window.

Allow drag-select of messages—If you select this option, you can click and drag on adjacent messages to select them as a group in the Table of Contents window. This allows you to transfer a group of messages to a mailbox or to delete them if the “Allow drag and drop transfers” is selected. The drag select works only if the drag starts on an unselected (not highlighted) message.
Setting Eudora Preferences

Styled Text

The Styled Text options determine when to use style information in outgoing and incoming messages.

To display the Styled Text options window

1. From the Tools menu, choose Options.
2. Scroll and click the Styled Text icon.

The Styled Text options window appears.

Styled Text options window

Select the options you want to change. Following are the descriptions of the options:

Show formatting toolbar—If you select this option, the formatting toolbar appears by default in new message windows. If this is turned off, the formatting toolbar is hidden by default in new message windows. This toolbar lets you easily format text styles in new messages.
When sending mail with styled text (HTML)—This specifies what to do with HTML text styles when you send mail. The styles are delivered to your recipients using the Hyper Text Markup Language (HTML) format. However, the styles your recipient sees depends on how well their email software supports this standard. HTML is the text formatting standard used in the World Wide Web by Web browsers and newer email applications. HTML allows you to use enriched text, which includes different fonts, color, sizes, bold, etc. Also, HTML lets you imbed pictures and create bullet lists in the emails you send.

Send plain and styled version in message, Send styled text only, Send plain text only—These options only apply to messages that have some styled content. Plain text messages are always sent as just plain text. If a message does have styled text, then these options control which versions of the message are sent: an HTML version, a plain text version, or both an HTML and a plain text version in the same message. If you send plain and styled text, your recipient will be able to view your message even though their email program does not support HTML; they view the message in plain text only.

Ask me each time—If you select this option, you are warned when you try to send or queue a message with text styles. And you are given the option to send just a plain text version, just an HTML version, or both in a single message.

When the body of a message has no styles, but the signature does has styles: Send the signature with styles—If you select this option, signature with styled text is sent with a message that has no styled text. If this is turned off, then the signature is sent but the text styles are removed.

NOTE: If selected, the signature becomes one with the message. However, if an attachment is included with you message, this option turns off.
Spell Checking
(Sponsored and Paid modes only)

The Spell Checking options control the behavior of Eudora’s built-in spelling checker when it performs a spelling check on the body of a message composition window, a text file, or a signature file. You can also change these options from the Spelling Options dialog box, accessed by clicking the Options button in the Check Spelling dialog box (accessed via the Edit menu).

To display the Spell Checking options window

1. From the Tools menu, choose Options.
2. Scroll and click the Spell Checking icon.

The Spell Checking options window appears.

Select the options you want to change. Following are the descriptions of the options:

Ignore capitalized words—The spelling checker ignores words that begin with a capital letter, such as proper nouns.

Ignore words with all capitals—The spelling checker ignores words that contain all capital letters, such as acronyms.
Ignore words with numbers—The spelling checker ignores words that contain numbers.

Ignore words with mixed case—The spelling checker ignores words that contain a mixture of uppercase and lowercase characters.

Report doubled words—The spelling checker reports words that appear twice in sequence in text and identifies them as Doubled words.

Suggest words—If you select this option, then when the spelling checker encounters an unknown word, it displays Eudora’s suggestions for the correct spelling of the word in the Suggestions field of the Check Spelling dialog box. You can also select any combination of the suggestion options: Phonetic words (off by default), Split words (on by default), Typographic words (on by default).

NOTE: If Eudora has no suggestions for the word in its dictionary, then no suggestions are listed.

Check spelling:

Automatically as you type—If you select this option, misspelled words will automatically be double-underlined and highlighted once you press the Spacebar after typing a word.

Only when requested—If you select this option, you can invoke the spell checker if you wish after you type your message.

Outgoing messages:

Ignore original text—The spelling checker ignores any text that is preceded by a quote mark, which is an excerpt bar (|). Eudora assumes that this text was originally from another message, and therefore does not need to be spell-checked.

Warn me when sending/queueing message with misspellings—If you select this option, Eudora displays a warning if you attempt to queue or send a message in which it has detected spelling errors.
Auto-Completion
(Sponsored and Paid modes only)

The Auto-completion options determine how you will use the name auto-completion feature to complete names and email addresses in the To:, Cc:, and Bcc: fields on the message headers of your outgoing messages. Eudora completes the names by looking for the names in either your history file or address book.

To display the Auto-completion options window

1. From the Tools menu, choose Options.
2. Scroll and click the Auto-completion icon.

The Auto-completion options window appears.

Auto-completion options window

Select the options you want to change. Following are the descriptions of the options:

**History File**—Select to make available the names from your history file to auto-complete in the To:, Cc:, and Bcc: fields in the message header. Turn off to not display names and email addresses from your history file in the drop-down name list.

The history file consists of names and email addresses that appear in the To:, Cc:, and Bcc: fields in the messages you send, reply to, or forward.
Setting Eudora Preferences

**Address Book**—Select to make available the nicknames you’ve previously set up in your address book to auto-complete in the To:, Cc:, and Bcc: fields in the message header. Turn off to not display nicknames from your address book in the drop-down name list.

**Plug-in Addresses**—Select this option to make available the email addresses stored elsewhere in Eudora, for example in ESP.

**Don’t auto-complete, just list matches**—Select this option if you don’t want Eudora to auto-complete your email address as you type it. If you choose this option, you need to just type one letter, and all email addresses that start with that letter from your address book and history list appear in a drop-down list for you to choose from.

**Use drop down list for completion choices**—Select to display the drop-down name list when you begin to type a name in the To:, Cc:, or Bcc: fields. Turn off to not display the drop-down name list.

**Names should appear in alphabetical order**—Select to display names in the drop-down list in alphabetical order. Turn off to display names based on usage.

**Add the from lines of replied-to messages**—Select to add the name appearing in the From: field from a received message that you replied to. This name and email address goes into your history file.

**Time to wait before popping up Auto-completion box in milliseconds**—Enter the number of milliseconds you want to wait before the auto-completion drop-down list appears for you to choose a name. The larger the number, the longer the wait. Zero indicates that the name list will appear immediately.

**Maximum number of entries to keep in history**—Enter the number of names you want to keep in your history file at any given time. As you add names, the old entries are removed leaving the amount of names equal to the number you entered in this field.
Date Display

The Date Display options determine how Eudora displays message dates in the Date column of mailbox window message summaries.

To display the Date Display options window

1. From the Tools menu, choose Options.
2. Scroll and click the Date Display icon.

The Date Display options window appears.

Select the options you want to change. Following are the descriptions of the options:

Display dates using—This specifies what time zone to use to display dates.

  Sender’s timezone—If selected, messages appear with the sender’s time and date, as determined by the sender’s time zone.

  Local timezone—If selected, messages appear with your time and date, based on your local time zone.
Setting Eudora Preferences

Date formats [default: Fixed]—These options and fields specify how to display message dates whether with a fixed or an age-sensitive format and the specific formatting for the selected option. A fixed format means that all dates appear under the same formatting rule. An age-sensitive format means that message dates appear differently depending on how old the messages are. Formatting is entered in the text fields using the format key at the bottom of the Date Display Options window (discussed further below).

Fixed [defaults: %1 %2 %4]—If you select this option, all message dates appear using the formatting entered in the edit field, based on the formatting key (see below). The default format (%1%2%4) specifies that all message dates will be in this format: message time followed by message date followed by message time zone (but only if the message did not originate from your local time zone). Example: 02:56PM11/21/97-0800.

Age-sensitive—If you select this option, message dates appear differently based on the age of the messages. The three age categories are RECENT, OLD, and ANCIENT. The age of a message is measured from the date and time at which the message was composed or sent, based on the sender’s email package, and this depends on your setting for the Display dates using option. RECENT messages are all those that are "younger" than the hours you specify in the Hours to be OLD field. ANCIENT messages are all those that are older than the "expiration time" entered in the Hours to be ANCIENT field. OLD messages are all those ages which falls between that of RECENT and ANCIENT messages: they are older than the number of hours specified in the Hours to be OLD field, but younger than the number of hours specified in the Hours to be ANCIENT field. The date display format for all messages falling in the RECENT, OLD, and ANCIENT categories is determined by your entry in the RECENT format, OLD format, and ANCIENT format fields, respectively.

RECENT format [default: %1]—Your entry in this field determines the format in which the dates of RECENT messages appear. RECENT messages are all those younger than the number in the Hours to be OLD field. The default RECENT format of %1 and the default Hours to be OLD of 24 means that all messages from the past 24 hours appear with the time.

Hours to be OLD [default: 24]—Your entry in this field determines the point at which RECENT messages become OLD messages. The default entry of 24 hours means that messages become OLD after one day.
OLD format [default: %3]—Your entry in this field determines the format in which the dates of OLD messages appear. OLD messages are those that are older than the Hours to be OLD but younger than the Hours to be ANCIENT. The default OLD format of %3, the default Hours to be OLD of 24, and the default Hours to be ANCIENT of 168 means that all messages older than one day and younger than one week appear with the day of the week.

Hours to be ANCIENT [default: 168]—Your entry in this field determines the point at which OLD messages become ANCIENT messages. The default entry of 168 hours means that messages become ANCIENT after a week.

ANCIENT format [default: %2]—Your entry in this field determines the format in which the dates of ANCIENT messages appear. ANCIENT messages are all those older than the number in the Hours to be ANCIENT field. The default entry of %2 and the default Hours to be ANCIENT of 168 means that all those messages older than a week appear with the date.

NOTE: Use the format key displayed at the bottom of the window to determine how to program entries in the Fixed field and the format fields (RECENT, OLD, and ANCIENT). In each field, enter %1 to stand for the Time, enter %2 to stand for the Date, enter %3 to stand for the Day of the week, and enter %4 to stand for the Time zone, but only if the message did not originate from the local time zone. Separate each entry with a space to improve readability of the display output: for example, %1%2%4.
Labels

The Labels options determine the title and color of the seven labels that can be used to categorize messages.

To display the Labels options window

1. From the Tools menu, choose Options.
2. Scroll and click the Labels icon.

The Labels options window appears.

Labels options window

To change a label title, type the new title in the field to the right of the label number. To change a label color, single-click the label number to display the Color dialog box.
**Color dialog box**

You can select from one of the pre-defined Basic colors or create your own Custom colors. To assign a basic color to a label, select the color and click **OK**. To create a custom color, click **Define Custom Colors** to display the custom colors palette.

**Custom colors palette**

To define a custom color

1. Select one of the 16 custom color boxes.

2. Using the mouse pointer, click anywhere on the color palette to select the color Hue and Saturation. Use the color control bar to the right of the color palette to adjust the color.

3. When you are satisfied with the color, click **Add to Custom Colors**.
4. Once you have completed creating the custom colors, select the desired label color and click **OK**.
Getting Attention

The Getting Attention options determine what Eudora does when it is running in the background and wants your attention, or when new mail arrives.

To display the Getting Attention options window

1. From the Tools menu, choose Options.
2. Scroll and click the Getting Attention icon.

The Getting Attention options window appears.

Select the options you want to change. Following are the descriptions of the options:

**Use an alert dialog box**—If you select this option, an alert dialog box notifies you when new mail is received. You will see the alert dialog box only if Eudora is in the foreground.

**Open mailbox**—If you select this option, mailboxes are automatically opened when new mail arrives in them, and the first unread message of the last unread batch of messages is selected.
Play a sound—If you select this option, a sound is played when Eudora needs attention. To select a sound file, click the long, horizontal button below the “Play a sound” option (the button is blank by default). Browse until you find your sound file. When the “Select sound file” dialog box appears, select a sound and click Open. To switch back to the default mail arrival sound, click Use Default.

Generate filter report—If you select this option, a filter report is generated when filters are used. Filter reports appear in the Filter Report window, accessed from the Tools menu. Note that this option must be on for such reports to appear in that window.

NOTE: These notifications can be changed on a per message basis using Filters. See Filtering Messages on page 161.
Background Tasks

The Background Tasks allow you to set parameters that determine how background tasks behave and what kind of information you want to see in the Task Status window. In other words, you can configure the behavior of background tasks. Also, you can set the Task Status and/or the Task Error windows to be brought to the front of other windows in Eudora when activity occurs. See Task Status Window on page 225 and Task Error Window on page 227.

In the Background Tasks options window, you can indicate the number of seconds of user inactivity before your newly retrieved mail is actually processed by Eudora. If you have automatic mail checking set up in the Checking Mail options, Eudora will retrieve the mail in the background from the incoming server at those time intervals. But Eudora will not process it until there is no user activity performed on your computer for the amount of seconds you indicate in the Background Tasks options window. An envelope displayed on the status bar, located at the lower right-hand corner of the Eudora window, indicating there is retrieved mail to be processed; that is, messages to be filtered and placed in mailboxes.

**Technical Note.** In the background, Eudora retrieves and sends mail; in the foreground, Eudora processes attachments and applies filters.

**To display the Background Tasks options window**

1. From the Tools menu, choose **Options**.

2. Scroll and click the **Background Tasks** icon.

   *The Background Tasks options window appears.*
Setting Eudora Preferences

**Background Tasks options window**

Select the options you want to change. Following are the descriptions of the options:

**Task Status Columns**—These options determine which columns appear in the Task Status window. Check the box next to the field column that you want to display. The options are Task, Persona, Status, Details, and Progress.

**Task**—Displays an icon with a short description of the tasks’ actions.

**Persona**—This column is available only if there is more than one personality set up. If checked, the Personality column displays the personality name for the given task.

**Status**—Displays a general description of the tasks current status, for example, “Logging into POP server.”

**Details**—Displays more information of the tasks’ status including network protocol commands.

**Progress**—Displays a progress bar indicating the overall progress of the tasks.
Wait for _ seconds of user inactivity before processing/filtering downloaded messages—[default: 20 seconds] If Eudora is retrieving mail automatically in the background, the amount of time set in this field indicates the idle time Eudora waits before delivering mail to your mailboxes and folders. For example, if you are composing a message and Eudora is retrieving mail in the background, Eudora will not deliver the mail until you stop typing for the amount of time indicated here. If the you set the time for 5 seconds, Eudora delivers your mail if you stop typing for at least 5 seconds. This field is beneficial if you don't want to be interrupted too frequently while using Eudora. If the number in this field is large, you'll get fewer interruptions.

Bring error window to front—Select this option to have the Task Error window brought to the front when an error occurs.

Bring task status window to front—Select this option to have the Task Status window brought to the front when a task occurs, for example sending or receiving mail.
Automation

The Automation options let you control and exchange information with Eudora from other programs that support the Windows Automation Interface, such as Microsoft Visual Basic. These options give you external access to Eudora mail folders, mailboxes, and messages, and to the Eudora application itself. With automation enabled, you can create, delete, and move Eudora mail folders, mailboxes, and messages, as well as get notification of these three operations when they are performed manually. You can also get lists of the subfolders under folders and of the messages within mailboxes. For more information on the automation feature, see the following Web site, click the following URL. http://eudora.qualcomm.com/developers, where you can find up-to-date automation SDKs (Software Developer's Kits) and documentation.

To display the Automation options window

1. From the Tools menu, choose Options.
2. Scroll and click the Automation icon.

The Automation options window appears.

Automation options window
Select the options you want to change. Following are the descriptions of the options:

**Automation enabled from this machine**—If you select this option, you can perform the automation operations described above from the computer on which Eudora is installed.

**Warn on Automation auto-send of messages**—If you select this option, a warning will appear if any message is sent automatically. For example, if you have a message set to be sent a certain time, a warning appears just before the message is sent. Another advantage is that if a virus ever tries to replicate itself using your address book entries, this warning will appear.
Extra Warnings

The Extra Warnings options determine whether you are warned before making a possible mistake. Most of the warnings appear with an option to stop that warning from being displayed again. You can toggle warnings to be either on or off.

To display the Extra Warnings options window

1. From the Tools menu, choose **Options**.
2. Scroll and click the **Extra Warnings** icon.

The Extra Warnings options window appears.

Extra Warnings options window

Select the options you want to change. Following are the descriptions of the options:

**Delete unread mail**—If you select this option, you are warned if you try to delete mail that is marked unread.

**Delete queued mail**—If you select this option, you are warned if you try to delete mail that is queued to be sent (marked 📬 or 🕒 for timed-queue) in the Out mailbox.

**Delete unsent mail**—If you select this option, you are warned if you try to delete messages that are marked sendable (with a bullet in the Out mailbox) but not yet sent.
Delete _ or more messages at a time [default: 50]—If you select this option, you are warned if you try to delete a group of messages containing more messages than the specified number.

Delete a message from the Search results—If you select this option, you are warned if you try to delete messages from the Find Messages search results window.

Queue a message with no subject—If you select this option, you are warned if you try to queue a message that contains no text in the Subject line. It is considered a point of email etiquette to give each message a subject.

Queue a message bigger than _ K [default: 500]—If you select this option, you are warned if you try to queue or send a message that is greater in size than the specified number. This number must be between 0 and 1000000 (one million, no commas). This size includes messages and attachments.

Quit with messages queued to be sent—If you select this option, you are warned if you try to quit Eudora while there are still queued messages in your Out mailbox.

Empty the Trash mailbox—If you select this option, you are warned if you try to empty the Trash mailbox (one way is using the Special menu Empty Trash command). Once messages are deleted from the Trash, they are completely gone from your system.

Start Eudora and it’s not the default mailer—If you select this option, you are warned if you try to start Eudora when it’s not the default mailer. When Eudora is the default mailer, <mailto:> commands open a Eudora message, regardless of what application the command is in.

Launch a program from a message—If you select this option, you are warned if you try to launch a program from a message. For security reasons, you should never launch a program sent to you from an unknown source, or if you’re not expecting a program without performing a virus check on the file. Do not launch any program if you don’t know the sender.

Launch a program externally—If you select this option, a warning alerts you to be careful when opening an attachment outside of Eudora, for example directly from the Attachments directory or from a Eudora Sharing Protocol (ESP) directory.

Forward files that are not in the attachment directory—If you select this option, Eudora will warn you when you forward a message and files are attached that do not reside in your attachment directory.
Enter an invalid server when creating a new personality—if you select this option, Eudora validates the connection to your mail server when creating a new personality, and will warn you if it is unable to connect to the server name you have entered.
Setting Eudora Preferences

MAPI

The MAPI options control the Eudora MAPI Server. Eudora’s MAPI support allows you to quickly attach documents to email messages directly from the application that created the document. Without MAPI, you must first save the document, remember what folder the document is in, switch to Eudora, and then remember to manually attach the document to the outgoing message. MAPI streamlines this process dramatically.

To email the current open document from your word processor, select the Send command from your word processor’s File menu. This automatically activates Eudora and attaches a snapshot of the open document to a new composition message. The MAPI system standardizes how messages are handled by client applications so that each client application does not need to have a custom code for each target messaging application. MAPI accomplishes this by providing a standard application program interface used by all MAPI-enabled client applications. An additional MAPI feature supported by Microsoft Office applications is the ability to add a “routing slip” to a Word, Excel, or PowerPoint document. This routing slip contains a list of email recipients obtained from the MAPI subsystem. Once a document has an embedded routing slip, then it can be semi-automatically routed as an attachment via email to all recipients listed in the routing slip. Once the routing is complete, the annotated document is returned back to the original sender.

NOTE: Close all other MAPI applications before changing Eudora’s status as a MAPI server.

To display the MAPI options window

1. From the Tools menu, choose Options.
2. Scroll and click the MAPI icon.

The MAPI options window appears.
Select the options you want to change. Following are the descriptions of the options:

**Use Eudora MAPI server**—If “Never” is selected, the Eudora MAPI server is turned off and is never automatically loaded. If “When Eudora is running” is selected, the Eudora MAPI server is selected when Eudora is running. If “Always” is selected, the Eudora MAPI server is selected and is always loaded on startup.

**Delete MAPI attachments**—If “Never” is selected, MAPI attachments are never deleted from the attachment directory. If “After sending message” is selected, MAPI attachments are deleted from the attachment directory when their corresponding messages are sent. If “When message emptied from Trash” is selected, MAPI attachments are deleted from the attachment directory when their corresponding messages are emptied from the Trash.
Send single MAPI file attachment as inline attachment (TXT and HTML files only)—
Select this when you need to have the MAPI client send a single TXT or HTML file as an
attachment with no body text. Eudora turns off the “Text As Attachment” button in the outgoing
message toolbar (if it is selected), so that the document is sent to the recipient as inline text in
the message body. This allows MAPI clients, such as Internet Explorer, to pass Web pages
and other HTML and TXT documents right into the body of the Eudora message. (The “Text
As Attachment” button, if turned on in the outgoing message toolbar, instructs Eudora to attach
text files, such as TXT and HTML, to the message rather than incorporating the text into the
message as part of the message body. The default state of this button is controlled by the “Put
text attachments in body of message” option in the Attachments options. See Attachments on
page 311.
Setting Eudora Preferences

Advanced Network

The Advanced Network options control some of Eudora’s advanced network functions.

**WARNING:** Consult your email administrator before modifying any of these options.

To display the Advanced Network options window

1. From the Tools menu, choose **Options**.
2. Scroll and click the **Advanced Network** icon.

*The Advanced Network options window appears.*

---

The Advanced Network options window is shown in the image. It includes options for network settings such as timeout and buffer size, as well as checkboxes for caching and Winsock DLL management.
Select the options you want to change. Following are the descriptions of the options:

**Network open timeout _ seconds** [default: 300]—This option lets you set the number of seconds before an attempt to make a network connection will time out. For some servers (especially those with heavy loads), the attempt to establish the network connection can take longer than it takes to send data back and forth once the connection has been made. A familiar example: When you are browsing the World Wide Web, you may find that it takes a while to connect to a server, but then, once you have connected to the server, the Web page can seem to download quickly. This option therefore gives you the ability to set a different (and usually longer) timeout for establishing the network connection. This setting is different from the setting for the timeout after the connection has been made. The latter timeout is set via the “Network timeout after _ seconds” option, below.

**Network timeout after _ seconds** [default: 300]—This option lets you set the number of seconds before an established network connection will time out. See the discussion above for the *Network open timeout _ seconds* option.

**Network buffer size of _ bytes** [default: 4096]—This option lets you set the size, in bytes, of the buffer that Eudora uses to transfer information to and from the server.

**NOTE:** If you are having trouble transferring large messages, the size of this buffer may be decreased.

**Cache network info**—This option causes Eudora to remember the results of previous database functions when using the Winsock connection method. This speeds up database functions within a single Eudora session.

**Unload Winsock DLL after closing socket**—If you are using Winsock dialer, select this option if you like to have your computer dial and hang-up between functions, for example sending and receiving mail.
Kerberos

These options control the Kerberos authentication system. If your network uses Kerberos for authentication, the appropriate options are provided by your email administrator.

To display the Kerberos options window

1. From the Tools menu, choose Options.
2. Scroll and click the Kerberos icon.

The Kerberos options window appears.

Select the options you want to change. Following are the descriptions of the options:

Kerberos Authentication—Turn on Kerberos 5 to authenticate the POP, IMAP, and SMTP protocols.

Kerberos 4 (POP only)—Turn on Kerberos 4 to authenticate POP only.

Kerberos POP3 port—This is the port that the Kerberos POP server is listening on.

Realm—This is the network realm that the Kerberos server resides in.
Setting Eudora Preferences

Service name [default rcmd]—This is the type of service that you’re requesting.

Service format [default: %1.%4%@%3]—This is the name of the ticket that Eudora requests from the Kerberos server. The formatting key below this field indicates what to enter. Enter %1 to stand for the service name entered in the Service name field; enter %2 to stand for the full domain name of the POP host; enter %3 to stand for the realm entered in the Realm field; enter %4 to stand for the name of the POP host.

For more information about Kerberos, see the following Web site. Click the following URL: http://web.mit.edu/kerberos/www/index.htm
MoodWatch (Sponsored and Paid modes only)

In the MoodWatch options window, you can determine at what level you wish your messages to be monitored before a warning appears telling you that, perhaps, your message content may be offensive to your recipient. Also, you can set MoodWatch to monitor incoming and stored messages for offensive content.

If you don't want to use MoodWatch at all, you can turn it off in this window. Also, you can choose if you want to use MoodWatch for incoming messages only, outgoing messages only, or both.

**To display the Extra Warnings options window**

1. From the Tools menu, choose **Options**.
2. Scroll and click the MoodWatch icon.

*The MoodWatch options window appears.*

**MoodWatch options window**

Select the options you want to change. Following are the descriptions of the options:

**Enable MoodWatch**—If checked, MoodWatch is on. To turn MoodWatch off, just uncheck the box.
**Warn when queueing/sending**—The following options warn you when MoodWatch detects anything that may be offensive in your message.

- **Message seems like it might be offensive**—Turn this option on to set MoodWatch to its most sensitive level. If your message has some content that looks like it might be offensive (one chili pepper appearing), you will be warned when you queue it.

- **Message is probably offensive**—Turn this option on to set MoodWatch to a medium sensitivity level. If your message has some content that looks like it is offensive (two chili peppers appearing), you will be warned when you queue it.

- **Message is on fire**—Turn this option on to set MoodWatch to a low sensitivity level. If your message has some content that is offensive (three chili peppers appearing), you will be warned when you queue it.

- **Never**—Turn this option on to never display a warning in your outgoing messages, despite offensive text in its content.

**Delay when queuing/sending**—The following options allow you to delay sending an offending message giving you time to “cool off.” During the delay period, you can either delete the message or send it. After the delay period is over, your message will be sent.

- **Message seems like it might be offensive**—Turn this option on to delay a message to be sent when MoodWatch is at its most sensitive level. If your message has some content that looks like it might be offensive (one chili pepper or more appearing), your message will sit in your Out box for ten minutes before Eudora sends it.

- **Message is probably offensive**—Turn this option on to set MoodWatch to a medium sensitivity level. If your message has some content that looks like it is offensive (two chili peppers or more appearing), your message will sit in your Out box for ten minutes before Eudora sends it.

- **Message is on fire**—Turn this option on to set MoodWatch to a low sensitivity level. If your message has some content that is offensive (three chili peppers appearing), your message will sit in your Out box for ten minutes before Eudora sends it.

- **Never**—Turn this option on to never delay your outgoing messages being sent, despite offensive text in its content. This is the default.
Setting Eudora Preferences

Scanning incoming mail

**Scan new mail as it arrives**—Turn this option on to allow MoodWatch to scan all of your incoming mail. MoodWatch determines the level of offensive text contained in the message. MoodWatch then displays one, two, or three chili peppers in the MoodWatch column of the mailbox where the message resides.

**Scan stored mail in the background**—Turn this option on to allow MoodWatch to scan all of your stored messages. MoodWatch determines the level of offensive text contained in each message. MoodWatch then displays one, two, or three chili peppers in the MoodWatch column of the mailbox where the message resides.
Statistics (Sponsored and Paid modes only)

In the Statistics options window, you can choose the color and graph type you prefer when displaying and printing the Statistics window found in the Window menu. The Statistics window displays your email usage, that is the statistics on received, sent, and general Eudora usage. You can display this information for the current or previous day, week, month, or year.

To display the Statistics options window

1. From the Tools menu, choose Options.
2. Scroll and click the Statistics icon.

*The Statistics options window appears.*

**Statistics options window**

Choose the settings you want to change. Settings are described below.

**Series**—This column lists the different timeframes displayed in the Statistics window. Current refers to the current day, week, month, or year, as selected in the Statistics window. Previous refers to the previous day, week, month, or year, as selected in the Statistics window. Average is the cumulative average that occurs on a day-to-day basis. For example, if you choose to view your statistics for each day, the current graph would be today, and the previous graph would be yesterday. The average graph would indicate the cumulative average since you began keeping statistical information in Eudora.
Setting Eudora Preferences

**Color**—Choose the color you wish to represent the current, previous, and average criteria.

**Graph Type**—Choose the graph type you prefer to display for the current, previous, and average criteria. The graph type you choose will appear in the color you chose in the Color column. The graph types you can choose are a line, a solid (filled) area, a graph bar, a circle, diamond, or a square.

**Count IMAP messages in Inbox only**—Turn this option on if you want Eudora, for statistical purposes, to count only the IMAP messages received in the Inbox. Turn this option off if you want Eudora to count all received IMAP messages regardless of which mailbox they are received into. If you use shared IMAP folders, you’ll probably want to leave this turned on; otherwise, messages that are not really addressed to you may get counted.

**Reset Statistics**—Click this button to reset your statistical usage. All historical information on your Eudora usage is deleted. Statistical information will then begin from that moment on.
Setting Eudora Preferences

Miscellaneous

The Miscellaneous options determine additional Eudora capabilities that are not categorized with other functions.

To display the Miscellaneous options window

1. From the Tools menu, choose Options.
2. Scroll and click the Miscellaneous icon.

The Miscellaneous options window appears.

Miscellaneous options window

Select the options you want to change. Following are the descriptions of the options:

Switch messages with:

**Unmodified arrow keys**—If you select this option and if there is an incoming message window open on the screen, the up or left arrow key closes the current message and opens the previous message in the mailbox. The down or right arrow key closes the current message and opens the next message in the mailbox. If this option is turned off, the arrow keys can be used to move the cursor (insertion point) within messages and in the preview pane.
NOTE: The preview pane will get updated to correspond to the current message in focus. This can be an easy way to read your mail. To enable the preview pane, see Viewing Mail on page 317.

Even if you select this option, the arrow keys do not switch messages if there is an outgoing message topmost on the screen.

**Ctrl+arrow keys**—If you select this option, you can switch messages by holding down the Ctrl key and pressing the arrow keys. The switching behavior is described above under the Unmodified arrow keys option. The Ctrl+arrow keystrokes do not work when composition windows are open on the screen.

**Alt+arrow keys**—If you select this option, you can switch messages by holding down the Alt key and pressing the arrow keys. The switching behavior is described above under the Unmodified arrow keys option. The Alt+arrow keystrokes do work when composition windows are open on the screen.

**Empty Trash when exiting**—If you select this option, the Trash mailbox is emptied when you exit Eudora. If this is turned off, the Trash is only emptied when you select “Empty Trash” from the Special menu.

**Say OK to alerts after _ second(s) [default: 120]**—If you select this option, any alerts that announce a problem with the network communication automatically go away after the specified number of seconds. Many network problems are temporary, so this allows Eudora to try the communication again. This is most useful if you have automatic mail-checking enabled for any of your accounts.

**Turbo redirect by default**—If you select this option, the behavior of the Redirect command is changed. If you frequently redirect mail to a particular person, make that person’s email address correspond to a nickname and also add it to your recipient list in your Address Book. When you get an email message that you want to redirect, select the message, then choose Redirect to from the Message menu, and select the recipient. The message gets queued as a redirected message to the recipient, and the original received message gets deleted. This method can be used to redirect a large number of messages.

If this option is turned off, then selecting Redirect to a recipient will open the message and wait for you to send/queue the message. The original message is kept, but its status is changed to “redirected.”
Include outdated ‘Return-Receipt-To’ (Sponsored and Paid modes only)—If this is turned off, Eudora uses the “Disposition-Notification-To:" header in return receipt requests to request that you be sent a notification when your message appears by the recipient. If you select this option, Eudora also sends the Return-Receipt-To: header in return receipt requests. This header is understood by some older mail delivery systems, and may return you a receipt when your message is delivered to your recipient’s mailbox. The Return-Receipt-To: header cannot give you any information about whether or not your recipient displayed your mail, and is not supported by many newer mail delivery systems. Your recipient must specify that he/she wants to send you a return receipt for you to receive it.

Automatically expand nicknames (Sponsored and Paid modes only)—If you select this option, nicknames in message headers are replaced with the real addresses when you switch fields. If turned off, the nickname is expanded when the message is sent.

Auto-save messages every _ minutes—Enter the number of minutes between auto-save intervals. In case of a system shut-down, the messages saved are from the most current auto-save. You can find your saved messages in your Out mailbox.

Hide address books from simple viruses—If this option is on, Eudora uses .nnt as the file extension for address book file so that viruses that look for .txt files won’t find them. If this option is turned off, address book files are stored with .txt extensions.
Setting Eudora Preferences

Junk Mail (Paid mode only)

You can change the Junk Mail options in the Junk Mail options window. In this window, you can determine at what junk score level you wish your messages to be filtered and adjust other junk mail options.

To display the Junk Mail options window

1. From the Tools menu, choose **Options**.
2. Scroll and click the **Junk Mail** icon.

The Junk Mail options window appears.

**Junk Mail options window**

Select the options you want to change. Following are the descriptions of the options:

**Junk Threshold**—Eudora distinguishes junk mail by a scoring system. You can adjust this scoring threshold by using the slide bar indicator. If you slide the arrow to a lower number, Eudora filters out more junk mail but may also mistakenly filter more valid mail to the Junk mailbox. If you slide the arrow to a higher number, Eudora filters less junk mail but is less likely to incorrectly filter valid mail. The default setting is 50.
Junk & Address Books

Mail isn't junk if the sender is in an address book—Check this box to indicate that mail coming from people in your address book(s) should never be marked as junk mail.

NOTE: The following field does not work unless you check the Mail isn’t junk if the sender in an address book box.

Put Not Junk-ed senders in address book—Check this box to indicate that senders of valid mail found in the Junk mailbox are to be added to your address book when you select Not Junk from the Message menu. Future mail from this sender will never be filtered to the Junk mailbox again. This function works with the previous field.

Junk Mailbox

Automatically place junk in Junk mailbox—Check this box if you want Eudora to filter what it considers junk mail to the Junk mailbox. If this is not checked, junk mail appears in your In box and is scored. To see the junk mail score, go the Mailboxes option in the Tools menu and check the Junk box (located under the Show Mailbox Columns section).

Junk mailbox is never marked unread—Check this box if you don’t want your junk mailbox to indicate that it contains unread mail.

Trimming Junk Mailbox

Remove mail that is at least _ days old—Enter the number of days you’d like Eudora to keep junk mail in the Junk mailbox. Eudora scans the Junk mailbox periodically and removes the messages after the set number of days you enter in this field.

Warn before removing—Check this box if you want Eudora to warn you that junk mail messages are about to be removed from the Junk mailbox.
Junk Mail Extras (Paid mode only)

You can further change the Junk Mail options in the Junk Mail Extras options window.

To display the Junk Mail Extras options window

1. From the Tools menu, choose Options.
2. Scroll and click Junk Mail Extras.

The Junk Mail Extra options window appears.

Junk Mail Extras options window

Select the options you want to change. Following are the descriptions of the options:

Only remove junk whose score is at least _—A message is moved from the In mailbox to the Junk mailbox if the score is at least the number you enter here.

Junking assigns a score of _—When you indicate in Eudora that you would like a message to be junked, the score you enter here is assigned to that message.

Trim old junk to _—You can select where they would like the Junk mail to be stored when it is removed from the Junk mailbox, for example another mailbox or Trash.
Add 'Not Junk'ed senders to address book—If *Put not junked senders in the address book* is turned on under Junk Mail Options, this option adds addresses of "Not Junk'ed" senders into the address book entered here. Important – you must create an Address Book file with the same name.

If *Mail isn't junk if sender is in an address book* is selected from the Junk Mail Options list, any future email from this sender is not considered junk mail.

Delete fetched junk from server—This option removes junk'ed mail from the email server if the mail is being left on the server.

Use Ctrl-J for Junk—If this option, the ctrl-J hotkey maps to junking a message. If this option is off, ctrl-J is used for manually filtering messages.
Content Concentrator
(Sponsored and Paid modes only)

You can change how the concentrated messages appear in the message window and preview pane.

To display the Content Concentrator options window

1. From the Tools menu, choose Options.
2. Scroll and click the Content Concentrator icon.

The Content Concentrator Options window appears.

Content Concentrator options window showing drop-down menu

Select the options you want to change. Following are the descriptions of the options:

Single Message Profiles

**Preview Pane**—The profile of single concentrated messages as they appear in the preview pane. Choose one of the options from the drop-down menu. **Compact** is the default. Following are the options:

**None**—Turns off Content Concentrator. There is no change in the message format.
**Compact**—Message is truncated; that is, excess headers and text are removed and replaced with ellipses and a snip indicator. Only the To:, From:, Subject:, and CC: of the header fields appear.

**Terse**—Message is truncated further; only the From: field of the header appears in the message and the concentrated text.

**Message Window**—The profile of single concentrated messages as they appear in the message window. Choose one of the options from the drop-down menu. *None* is the default.

**Multiple Messages**

**Profile**—The profile of multiple concentrated messages as they appear in the preview pane. Choose one of the options from the drop-down menu. *None* is the default.

**Maximum # to Concentrate**—Enter the maximum number of messages you would like to group. Keeping this number small is recommended because concentrating a large number of messages can take time. The default is 20 messages.

**Require matching subjects or senders**—Check this box if you want subjects and senders to match when selecting messages to group.

**Generate multiple messages on reply**—Check this box if you want individual reply messages to be sent to each sender of each concentrated message instead of one message being sent to all the senders.
**BossWatch** (Paid mode only)

The BossWatch options determine how BossWatch will alert you to messages being sent to addresses that match your designated criteria.

To display the BossWatch Options window

1. From the Tools menu, choose **Options**.
2. Scroll and click the **BossWatch** icon.

*The BossWatch Options window appears.*

**BossWatch Options window**

- **Warn me additionally with a dialog**—If you select this option, Eudora will display a warning dialog when you click the Send or Queue button on messages that match your BossWatch criteria.

- **When sending to more than _ recipients**—If you select this option, Eudora will warn you with a dialog if you are sending to more recipients than the number entered in this setting, as well as to addresses on your BossWatch list.
NOTE: You must have enabled *Warn me additionally with a dialog* for the above setting to have any effect.

**When I do a Reply All**—If you select this option, Eudora will warn you with a dialog when you queue a message where *Reply to All* was used to generate the reply, as well as to addresses on your BossWatch list.

NOTE: You must have enabled *Warn me additionally with a dialog* for the above setting to have any effect.

**Speak Addresses**—If you select this option, Eudora uses the Microsoft Text-to-Speech engine to read the addresses that match your BossWatch criteria.

**When sending to more than _ recipients**—If you select this option, Eudora will warn you by speaking the names of your recipients if you are sending to more recipients than the number entered in this setting, as well as to addresses on your BossWatch list.

NOTE: You must have enabled *Speak Addresses* for the above setting to have any effect

**When I do a Reply All**—If you select this option, Eudora will warn you by speaking the email addresses of your recipients when you queue a message where *Reply to All* was used to generate the reply, as well as to addresses on your BossWatch list.

NOTE: You must have enabled *Speak Addresses* for the above setting to have any effect

**Domain Warnings**—

- **Outside domain**—If you enter a domain in this setting, Eudora will warn you when you are sending to a recipient whose address is not within the domain specified. Multiple domains may be entered separated by commas.

- **Inside domain**—If you enter a domain in this setting, Eudora will warn you when you are sending to a recipient whose address is within the domain specified. Multiple domains may be entered separated by commas.

**Color code BossWatch addresses using this color:** —If you select this option, Eudora will underline addresses from your BossWatch list in your composition window, as well as outline the Send or Queue button, with the selected color. You can click on the color to customize it.
Find Messages (Paid mode only)

The Find Messages options determine how Eudora’s ultra-fast indexed search functionality will work.

To display the Find Messages options window

1. From the Tools menu, choose Options.
2. Scroll and click the Find Messages icon.

The Find Messages Options window appears.

Find Messages Options

Use fast (indexed) search powered by X1—This setting turns on the indexed search capabilities within Eudora. If this setting is turned off, Eudora will revert to the slower, old-style search.

Index Now—Click this button to go through all mailboxes to update the existing index.

Re-Index Email...—Click this button to discard current index files, and begin indexing Eudora mail.

NOTE: You should only need to use Index Now and Re-Index Email buttons if indexed search is not working properly. Most users should never need to use these buttons.
Setting Eudora Preferences

Show index update progress in Task Status window when more than _ updates are pending—If this option is checked, Eudora will show a message in the Task Status window when there are more index updates to process than the number specified. Default setting is 100.

Include deleted IMAP messages in search results—If this option is checked, Eudora will display deleted IMAP messages in the search results if those messages match the search criteria, even though the IMAP mailbox might be configured to hide deleted messages. If this option is disabled, Eudora will not display deleted IMAP messages in the search results.
Eudora Sharing Protocol (ESP) is a Eudora feature that allows a group of people, called a share group, to collaborate and share a common set of files. ESP automatically gives each member of the share group a copy of those files, and when one of the members changes a file, it brings all the other members' copies up to date automatically. ESP also makes it easy for the members of a share group to send email messages to each other. Unlike other collaboration tools, ESP uses only email to keep everyone in sync on the shared files, so there's no need to maintain and administer a shared server.

ESP allows you to create and manage share groups within Eudora, on both Windows and Mac platforms. If you send and receive email through Eudora, you can belong to an ESP share group.

When you join an ESP group, you designate a shared folder on your hard drive. Eudora uses the shared folder to keep the most current copies of your group’s documents together. You and each member of your group have copies of the shared documents. When you or a member of your group adds, deletes, or updates a document, ESP automatically adds, deletes, or updates all copies of the document in all of the members’ shared folder.

You can use ESP for projects at work and for family members at home to help them stay in touch. For example, you can create a share group by inviting members of your family to share their most current photos with each other. When one member of the family adds a digitized photo to his or her shared folder, all members of the family can see it. It's like maintaining a family album that can be shared with members of family no matter where they live.

When communicating between members of your group, email messages from the group members are automatically routed to the mailbox of your choice. However, you can assign only one mailbox per group.

You do ESP functions from the ESP Groups window found on the Tools menu. These are the basic tasks in creating and maintaining a share group:

- Create a share group.
- Assign the share group a mailbox in Eudora and shared folder on your hard drive, for example, your C drive.
• Invite members to join the share group.
• Configure how ESP will update the shared folders.
• Configure how your group members are notified of changes to the shared folder.
• Maintain group membership by inviting or deleting members, or by synchronizing all shared folders.

However, you may be asked to join a share group. If so, answer the invitation and the you can create a new shared folder and mailbox.

**NOTE:** You can only belong to a group on one computer. For example, you can use your home computer to set up a group for family photos, and you can use your work computer to set up a group for a work related project. However, you cannot use both your home and work computer to view your family photos in your family group. If you try to do that, one or both computers will miss some of the photos.

However, if you have two different email addresses, you can belong to a share group on more than one computer. If you check mail with one email address at work and a different address at home, you just need to invite yourself to the share group twice, once for each address. Once you’re in the group with one account, you can send an invitation to your other account yourself. ESP will treat your two accounts as two different share group members, and each will receive all the updates.

**Installing ESP**

ESP should install automatically into the Eudora Plugins folder. However, if you need to install ESP yourself:

• To install ESP on Windows, copy the ESP.dll file to the Plugins folder, located in your Eudora folder.

**Tips on Using ESP**

Although ESP is a valuable tool for you and your group when working on the same document or file, there are some limitations. Here are a few tips on using ESP that will make working on group files more efficient.
• **Do** realize that the ESP folder is shared. If you take a file out of the shared folder, it will be removed from each member's shared folder.

• **Do** invite people to be in your group. Some of them might have to become familiar with ESP before becoming full members. As they are gaining experience, tell them how to become full members.

• **Do** use ESP to keep a shared list of current email addresses for group mailings. ESP updates email addresses when you change the email address for a personality. When saved in the ESP Groups window, ESP asks you if you want to update both your ESP's information and other members' information or just update your ESP information. If you choose both, an email message is sent to all group members and automatically updates your changed email address.

• **Do** use ESP as a mini-mailing list for, perhaps, a family, group of friends, coworkers and so on. The list of email addresses stays current in all of the members' lists when the addresses are modified.

• **Don't** put large files in ESP. Other members of your group may have mail systems with limits on file size.

• **Don't** put files in ESP where group members need to work on them at the same time. ESP works best when one member works on one file at a time.

• **Don't** put files in ESP that need to be updated in realtime. There will be a few minute delay in updated group files.

### Creating an ESP Group

You can create an ESP group and then invite members to join it. All members of an ESP group are of equal importance. Although you are creating the ESP group, it does not mean that you are its leader.

When you create a group, ESP assigns the group a unique identifier, which avoids any naming conflicts.

**To create a new group:**

1. From the Tools menu, choose **ESP Groups**.

   *The ESP Groups window appears.*
2. In the ESP Groups window, click **New** (located at the bottom of the window).

   *The Share Group Settings dialog box appears.*

3. Choose **Create a brand new share group**, then click **Next**.

   *The Share Group Name dialog box appears.*
4. In the Share Group Name text box, type the name of your group, then click **Next**.

   *The Share Group Description dialog box appears.*

5. In the Share Group Description text box, type a brief description of the group purpose or file contents; then click **Next**.

   *The Share Group Mailbox dialog box appears.*
6. Do one of the following:

- If you want to create a new mailbox for all group messages, choose **Transfer to New Mailbox** and type the name of the mailbox in the text box.

- If you want all group messages to go to an existing mailbox or a new mailbox in a different location, choose **Transfer to Existing Mailbox**, then click the long gray button. A list of your existing mailboxes appears. Right-click to create a mailbox in a different location. Click to select a mailbox, then click **OK** to enter it in the text box.

**NOTE:** You can’t transfer messages to either the In mailbox or a mailbox already assigned to another group.

7. Click **Next**. The Share Group Folder dialog box appears.
8. Do one of the following:

- If you want to create a new folder to store all group files, choose **Use New Folder** and type the name of the folder in the text box.

- If you want to create a new folder in a location other than the one shown under **Use New Folder**, switch to My Computer or Windows Explorer, create the folder, and switch back to Eudora. Choose **Use Existing Folder** to navigate to the folder you've just created, then choose it.

- If you want to store all group files in an existing folder, choose **Use Existing Folder** and click the long gray button. A list of your existing folders appears. Click one of the folders and to enter it in the field, click **OK**.

  **NOTE:** You can't use a folder already assigned to a group or a folder that's inside of another folder already assigned to a group.

9. Click **Next**.

   *The Success dialog box appears.*

10. Click **Finish**.

   *Your new share group is created.*

The share group name appears in the list view attachment of the groups window.
Creating an ESP Group (Advanced Setup)

After you feel comfortable creating groups, you can bypass it and enter the group information directly.

To use the Advanced Group Setup function:

1. From the Tools menu, choose ESP Groups.

   *The ESP Groups window appears.*

2. Click New (located at the bottom of the window).

   *The Share Group Settings dialog box appears.*

**Share Group Settings dialog box**

3. Choose **Skip directly to advanced share group setup**.

   *The New Group dialog box appears.*
4. Type the new group name in the *Group Name* text box.

5. Click the *Shared Folder* long gray button and choose a folder for this group. Click *OK*.

6. Click the *Mailbox* long gray button and choose a mailbox for this group messages. Click *OK*.

7. Click the *Personality* long gray button and choose the Eudora personality you want linked with this group. Click *OK*.

8. In the *Description* text box, type a brief description of the group function or contents (optional).

9. Click *OK*.

ESP adds the new share group to your list of groups. The share groups you create are listed in the ESP Groups window in the left column.

**Inviting Members to Join Your Group**

To be fully functional, your group must contain members in addition to yourself. Once you invite someone, you can determine at what level a role they will play within the share group. You can invite members to the group who can receive only the group messages.
To invite users to join your group:

1. From the Tools menu, choose **ESP Groups**.
   
   *The ESP Groups window appears.*

2. In the left column, choose the Group name to which you want to invite members.

3. Click the **User** tab.
   
   *The User dialog box appears.*

4. Click **Invite**.
   
   *The Share Group Role Settings dialog box appears.*

   **NOTE:** To add a user to receive the group messages only, press the Shift key while clicking **Invite**. The Advanced Add dialog box appears where you can enter the person’s name and email address. The user’s name and email address is stored in your Users list, but ESP doesn’t send an invitation. This user receives only email messages that have the group shared documents as attachments.

**Share Group Role Settings dialog box**

![Share Group Role Settings dialog box](image)
5. You can determine which tasks each invitee to your group can do. In the Initial Role area, choose of the following roles:

- **No Preference**

- **Full Membership** (user sends and receives updates). This allows the person you invite to receive from and send files to the group, either automatically or manually.

- **Broadcasting Member** (user only sends updates, ignores any incoming updates). This allows the person you invite to send files to the group only, either automatically or manually. Incoming files are ignored.

- **Receiving Member** (user never sends updates, but processes incoming updates). This allows the person you invite to receive files from the group only. Any changes you make to the shared folder are ignored.

The system default is **No Preference**.

6. In the Notifications area:

- If you want ESP to notify the person you invite when updates are coming into your shared folder, check the **Ask before processing any updates INCOMING TO my shared folder** box. This box is checked by default.

- If you want ESP to notify the person you invite when updates are going out of your shared folder, check the **Ask before processing any updates OUTGOING FROM my shared folder** box. This box is checked by default.

- If you want ESP to warn the person you invite when the potential member attempts to change role type, check the **Prefer that user does not change role (displays warning)** box. If checked, the member can change role type but is discouraged to do so.

7. Click **OK**.

   A message window opens that contains an invitation message for the selected group. This message has a special attachment containing the group invitation.

8. In an open message window, enter the email addresses of the invitee(s) in the **To:** header.

When an invitee accepts the invitation, information contained in the attachment creates a group entry in the invitee’s Groups window and prompts him or her to specify a group folder and mailbox. ESP sends an RSVP message back to the inviter. The inviter then sends an updated copy of the membership list to all the members.
Configuring Shared Folder Settings

Every group member needs a shared folder on his or her hard drive to store documents, schedules, messages, illustrations, images, or any other file the members deem necessary for sharing. ESP allows you and your group members to determine how often ESP checks each member’s shared folder for updates, and how the information in the shared folders is backed up.

To configure shared folder settings for your group

1. From the Tools menu, choose ESP Groups.

   The ESP Groups window appears.

2. In the left column, choose the Group name whose shared folders you want to set.

3. Click the Settings tab.

   The Settings dialog box appears.

**Settings dialog box**

<table>
<thead>
<tr>
<th>Users</th>
<th>Eudora</th>
<th>Settings</th>
<th>Notifications</th>
<th>Advanced</th>
</tr>
</thead>
</table>

**Shared Folder Check**

- **Check shared folder for changes every _ minutes**
  - Check box
  - Specify time interval
  - Default: 10 minutes

- **Don’t check when using battery**
  - Uncheck box

**Auto-Backup When Other Share Group Members Make Changes**

- **Auto-Backup updated documents**
  - Check box

- **Auto-Backup deleted documents**
  - Check box

- **Store up to _ previous versions**
  - Specify number of versions

4. Check the **Check shared folder for changes every _ minutes** box and specify the time interval at which you want ESP to check the shared folder for group updates. If this option is not checked, ESP won’t check the shared folder. The system default is for ESP to check the shared folder every 10 minutes.

5. If you want ESP to automatically create a backup when other members update files in the shared folder, check the **Auto-Backup updated documents** box. The box is checked by default.
6. If you want ESP to automatically back up deleted documents from the shared folder, check the **Auto-Backup deleted documents** box. The box is checked by default.

7. In the **Store up to _ previous versions** text box, indicate the number of previous document versions you want Eudora to store. The system default is one version.

### Configuring Group Change Notifications

You can specify the role you want to play in the group, which determines whether or not you can send or receive updates to the shared folder. When you’ve determined your ESP role, you can then decide how you want ESP to handle updates to the shared folder and group membership.

1. From the Tools menu, choose **ESP Groups**.

   *The ESP Groups window appears.*

2. In the left column, choose the Group name whose change notifications you want to set for your role.

3. Click the **Notifications** tab.

   *The Notifications dialog box appears.*

#### Notifications dialog box

<table>
<thead>
<tr>
<th>Role</th>
<th>User</th>
<th>Eudora</th>
<th>Settings</th>
<th>Notifications</th>
<th>Advanced</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full Member (send and receive updates)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Broadcasting Member (only send updates, ignore any incoming updates)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Receiving Member (never send updates, but process incoming updates)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Custom Member (use the settings in the Advanced tab)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Ask before processing any updates **INCOMING TO** my shared folder
- **✓** Ask before processing any updates **OUTGOING FROM** my shared folder
- Log any share group actions
- **✓** Ask before responding to a membership update
- **✓** Log any membership updates
4. Click one of the following in the *Role* area:

- **Full Membership** (user sends and receives updates). This allows you to receive from and send files to the group, either automatically or manually.

- **Broadcasting Member** (user only sends updates, ignores any incoming updates). This allows you to only send files to the group, either automatically or manually. Incoming files are ignored.

- **Receiving Member** (user never sends updates, but processes incoming updates). This allows you to only receive files from the group. Any changes you make to the shared folder are ignored.

- **Custom Member** (use the settings in the Advanced tab). Go to step 6.

The Full Member role is the default.

5. In the *Notifications* area:

- If you want ESP to notify you when updates are coming into your shared folder, check the *Ask before processing any updates INCOMING TO my shared folder* box. This box is checked by default.

- If you want ESP to notify you when updates are going out of your shared folder, check the *Ask before processing any updates OUTGOING FROM my shared folder* box. This box is checked by default.

- If you want ESP to monitor any of the group actions, check the *Log any group actions* box. The box is checked by default. A log file is created and placed in a subfolder in the Eudora folder.

- If you want ESP to notify you prior to changes in the group’s membership, check the *Ask before responding to a membership update* box. The box is checked by default.

- If you want ESP to record all changes to group membership, check the *Log any membership update* box. A log file is created and placed in a subfolder in the Eudora folder. The box is checked by default.

6. If you chose **Custom Member** as your role, you must click the **Advanced** tab to display the Advanced dialog box to configure your role settings. In this dialog box, you are required to make various decisions about how you want ESP to handle modifications to the shared folder. It also enables you to choose how ESP should track group membership.
Advanced dialog box

7. In the *Shared Folder Action (Custom Member)* area:

- Determine which type of incoming or outgoing items—**New Items**, **Updated**, or **Deleted Items**—you want ESP to handle.
- From the drop-down lists, choose one of the following:
  - To have ESP notify you before specific files in the shared folder are added, updated or deleted, choose **Ask first**.
    - To have ESP modify specific files in the share folder automatically, choose **Do file updates**.
    - To have Eudora ignore proposed updates to specific files in the shared folder automatically, choose **Ignore file updates**.
  - If you want Eudora to record the activity for each type of incoming or outgoing item, check the **Log** box.
NOTE: The system default options from the drop-down menus for all incoming and outgoing menus correspond to the last chosen options you selected in the Notifications dialog box. The Role buttons combined with the Ask before processing any updates INCOMING TO my shared folder and Ask before processing any updates OUTGOING FROM my shared folder are then equal to the choices in the drop-down menus. The Advanced tab dialog box allows you to add, update, and delete settings independently of each other. Whereas in the Notifications dialog box, while simpler, keeps the settings locked. For example, you could use the Advanced tab dialog box to specify that you want to be asked when a delete occurs, but not when additions and updates occur.

8. To set a group secret word or phrase, click Set Shared Secret.

The Set Shared Secret dialog box appears.

**Shared Secret dialog box**

The shared secret helps to make ESP more secure. If you change the secret, you must tell all other members in your group; the new value or ESP will not accept changes from other members.

9. In the text box, enter a secret word or phrase that will be known only to you and the other members in your group. You will need to share the secret word or phrase with the other group members. The secret word or phrase is used to make the transmission of file changes more secure so that ESP can verify any incoming file changes were actually sent by a group member.

NOTE: If your shared secret does not match the shared secret of other group members, you will get a security error when you receive file changes from them. So if you choose to use a shared secret word or phrase for improved security, be sure that all group members set the exact same shared secret word or phrase. The secret word or phrase is case-sensitive.

10. When finished, click OK.
Maintaining ESP Group Members

In the User dialog box in the Groups window, you can maintain your group members by deleting them from the group, inviting new members, or by syncing the selected member’s shared folder.

**To maintain group members:**

1. From the Tools menu, choose ESP Groups.

   *The ESP Groups window appears.*

2. In the left column, choose the group whose users you wish to maintain.

3. Choose the Users tab.

   *The Users dialog box appears, and a list of members of the selected group appears.*

**User dialog box**

4. In this dialog box, you can do all of the following:

   - **Invite**—To invite a new ESP member to join the group, click Invite. See Inviting Members to Join Your Group on page 377.
• **Delete**—To delete group members, choose the member’s name and click **Delete**. You should use this function to delete invalid members. To preserve group participation and communication, use the **Delete** function sparingly. In most situations, the departing group member uses the **Leave** function to notify all group members of the departure from the group. The **Delete** function bypasses this process.

• **Sync Folder**—To send the entire contents of your shared folder to another group member, choose the member’s name and click **Sync Folder**.

**NOTE:** ESP updates email addresses when you change the email address for a personality. When saved in the ESP Group window, ESP asks you if you want to update both your ESP’s information and other members’ information or just update your ESP information. If you choose both, an email message is sent to all group members and automatically updates your changed email address.

### Joining an ESP Group

ESP manages group membership through a shared mailing list, allowing group members to share files and messages. ESP creates the mailing list through a series of processes, called invitations, ensuring that each member of the group has explicit knowledge of group membership by acknowledging and approving each new member.

**To join an existing group**

1. Wait for an email message from one of the group members inviting you to join their group.

   *The Join ESP Share Group dialog box automatically appears after Eudora is done receiving the email message.*

   **Join ESP Share Group**

   ![Join ESP Share Group](image)

   2. To join the group, click **Join**. If you don’t want to join, click **Cancel**.
ESP prompts you to join the group by opening the New Group Wizard. Choose a folder to store your copies of the shared documents and a mailbox to receive messages associated with the group. See Creating an ESP Group on page 371 for details.

ESP processes the invitation, adds you as a member of the group, and sends an RSVP message to the member who invited you to join. When the inviter's copy of ESP receives your acceptance, you'll be sent a membership update message which will add the other group members to your list.

**NOTE:** Until you receive an introduction from another group member, ESP doesn’t associate those members with you as part of the group.

When all introduction messages are received and answered, you are a member of the group.

**Leaving an ESP Group**

When you want to leave a group, ESP removes the group from your list of available groups and sends a message to the other group members asking them to remove you from the group.

**To leave a group**

1. From the Tools menu, choose **ESP Groups**.

   The ESP Groups window appears.

2. In the left column, choose the name of the group you want to leave.

3. Click **Leave** (located at the bottom of the Groups window).

   The Leave Share Group dialog box opens.

**Leave Share Group dialog box**

4. In the Leave Group dialog box, click **Leave**.
ESP creates a message to other group members announcing your departure from the group. This message’s attachment deletes you from other group members’ membership lists.

Until you save changes to the ESP Groups window, you can cancel your departure from the group. Just choose the share group that you had planned to leave and click **Rejoin**, which is what the *Leave* button will be renamed when you chose this group.

If you’re sure you want to leave the group, then save changes to the ESP Groups window by either closing the window and choosing **Save** in the displayed dialog box or by choosing **Save** from the File menu. ESP will send a message to other group members announcing your departure from the group.

### Working with Shared Folders

Use the shared folder like any folder in Windows by adding, modifying, or deleting files as needed.

**To open the shared folder:**

1. From the Tools menu, choose **ESP Groups**.
2. In the left column, choose the name of the group you want to open and click **Open Folder**.

*The Save Changes dialog box opens if you have any unsaved changes to the shared folder. If not, the shared folder opens, allowing you to access its files.*

ESP periodically scans the folder for changes, according to your settings, and sends the updated files to other group members.

To update the shared folder of another group member manually, choose the member from the Users dialog box and click **Sync Folder**. This sends the entire contents of the shared folder to the selected member.

As ESP receives periodic changes to the shared folder from other users, it incorporates the changes according to the settings you chose for the group (for example, with or without notification, and with or without archiving).
Changing ESP Group Information

ESP allows you to change the configuration of a share group to meet the changing needs of its members. The same tabs (User, Eudora, Settings, Notifications, and Advanced) you used to create a share group and configure its attributes can be used to change those of an existing group.

To make changes to an existing share group:

1. From the Tools menu, choose ESP Groups.
   The ESP Groups window appears.
2. In the left column, choose the group you wish to change.
3. Click any of the tabs and make your changes in their respective dialog boxes.
4. When finished, click OK.

Configuring Global ESP Settings

You can control the type of messages received by the shared folder through the use of filters and automatic processing actions.

NOTE: It is recommended that you retain the default settings.

To configure your group settings:

1. From the Tools menu, choose ESP Groups.
   The ESP Groups window appears.
2. Click Settings (located at the bottom of the Groups window).
   The Group Setting dialog box appears.
3. In the ESP Automatic Filters Precedence area, choose **Run automatic filters before user filters** or the **Run automatic filters after user filters**. Depending on which option you activate, ESP filters incoming messages into the shared folder either before or after your own filters take effect. To run the automatic ESP filters before your personal filters is the default.

4. In the Automatic Actions area, check the **Allow automatic processing of incoming attachments** box if you want the shared folder updated automatically with email message attachments as specified in the Settings dialog box. The default is to automatically process incoming attachments.

5. If you want your shared folders scanned automatically at the frequency you specified in the Settings dialog box, check the **Allow automatic scanning of shared folders** box. The system default is to allow automatic shared folder scanning.

**Using the ESP Mailbox and Folder**

When you create or choose a mailbox for the ESP group, two tabs appear in the window as well as an icon. One contains all the messages in the mailbox, and other contains the shared folder and its files. The icon displays the ESP menu.

Following is an example of an ESP mailbox.
When you click the **Mailbox** tab, messages associated with this group appear. While in the ESP mailbox, you can perform all the tasks and functions as in any other Eudora mailbox.

When you click the **Folder** tab, a browser window appears containing the shared folder and its files.

When you click the ESP menu appears. From this menu, you can choose to perform for the group.

Following is an example of an ESP Folder displaying the ESP menu.
Sample ESP Folder window and ESP menu

To display the ESP menu, click 📦. Following are the descriptions of the options on the ESP menu:

**New Message**—Opens a new composition window addressed to the group for you to type a message.

**Open Folder**—Opens your shared folder in a new window.

**Invite**—Invites a new member or members to join the group. See Inviting Members to Join Your Group on page 377.

**ESP Groups**—Opens the ESP Groups window.

**Update Others**—Updates the files in other members' shared folders.

The file management icons are described below:

- Displays one page back
- Displays one page forward
- Moves up one directory level
Displays the properties for the selected file

Deletes the selected file

Displays files with large icons

Displays files with small icons

Displays files in a list format

Displays file detail
Eudora Modifiers

Many operations in Eudora can be implemented by holding down one or more “modifier” keys. Eudora uses the Shift, Ctrl, and Alt keys as modifiers. Keys you need to press are displayed between brackets ([ ]).

[Shift] + Check Mail—Displays the Mail Transfer Options dialog to define the interaction with your POP account.

[Shift] + Queue/Send—Opens the Change Queueing dialog.

[Shift] + Insert Recipient—Inserts the address(es) instead of the nickname.

[Shift] + [Ctrl] + ,—Expands the nicknames in the current field to their real addresses (the cursor must be in the appropriate field).

[Shift] + Finish Address Book Entry—Finishes the Address Book entry with the address(es) instead of the nickname.

[Shift] + Sort command—Sorts in descending order.

[Shift] + Transfer—Puts a copy of the current message in the selected mailbox and leave the original where it is.

[Shift] + Wrap Selection—Removes the carriage returns from the selected text (unwrap).

[Shift] + Save—Saves changes to all open windows.

[Shift] + Close—Closes all open windows.

[Shift] + Exit—Sets all open windows to open again when Eudora is next started.
[Shift] + Check Spelling—Performs an “inline” spelling check of the entire message or selected text. Misspelled words are highlighted in red double-underline. Right-click on a highlighted word and select the correct spelling from suggestions on a drop-down list.

[Shift] + [Space]—Switches the status of the open incoming message, or one or more selected incoming messages, from “read” to “unread” or from “unread” to “read.”

[Ctrl] + [Space]—Resets the current or selected text in the message body of a composition window to the default character formatting.

[Ctrl] + Drag window or toolbar—Temporarily suspends docking while dragging a dockable window or the main toolbar.

[Alt] + Drag toolbar button—Moves the button on the toolbar.
Eudora Shortcuts

The shortcuts for Eudora functions are as follows:

- **[Ctrl] + 0**  
  Opens Out mailbox

- **[Ctrl] + 1**  
  Opens In mailbox

- **[Ctrl] + 6**  
  Checks spelling

- **[Ctrl] + ’**  
  Pastes as quotation

- **[Ctrl] + >**  
  Adds one level of quotes

- **[Ctrl] + .**  
  Removes one level of quotes

- **[Ctrl] + ,**  
  Finishes address book entry (nickname)

- **[Ctrl] + A**  
  Selects all

- **[Ctrl] + B**  
  Makes text bold

- **[Ctrl] + C**  
  Copies to clipboard

- **[Ctrl] + D**  
  Deletes

- **[Ctrl] + E**  
  Sends immediately or Queues for delivery

- **[Ctrl] + F**  
  Opens *Find Messages* window

- **[Ctrl] + [Shift] + F**  
  Opens *Find Text* dialog box

- **[Ctrl] + H**  
  Attaches document

- **[Ctrl] + I**  
  Makes text italic

- **[Ctrl] + J**  
  Filters messages OR filters Junk mail messages

- **[Ctrl] + [Shift] + J**  
  Filters a message out of the Junk mailbox into the designated mailbox.
Using Modifiers and Shortcuts

[Ctrl] + K  Makes address book entry (nickname)
[Ctrl] + L  Opens Address Book
[Ctrl] + M  Checks mail
[Ctrl] + N  Opens a new message
[Ctrl] + O  Opens file
[Ctrl] + P  Prints
[Ctrl] + Q  Exits (quits) Eudora
[Ctrl] + R  Replies to the message
[Ctrl] + [Shift] + R  Replies to all
[Ctrl] + S  Saves current window
[Ctrl] + T  Sends queued messages
[Ctrl] + U  Underlines text
[Ctrl] + V  Pastes from clipboard
[Ctrl] + W  Closes window
[Ctrl] + X  Cuts to clipboard
[Ctrl] + Y  Opens Directory Services
[Ctrl] + [Shift] + Y  Opens Directory Services and performs a lookup on selected text
[Ctrl] + Z  Undo
[Ctrl] + [tab]  Switches between opened mailboxes and messages
[Shift] + F4  Tiles windows horizontally
### Using Modifiers and Shortcuts

</tbody>
</table>
F6 Toggles between the two halves of any split window (in composition windows, the Address Book, the Filters window, and, when the preview pane appears, mailbox windows).

[Ctrl] + [Alt] + F6 Sends the topmost window to the back of all displayed windows.

F7 Shows or hides one half of a split window (current window only): in composition windows, shows/hides the message header; in mailbox windows, shows/hides the message preview pane (if it is set to display).

[Home] Scrolls to the beginning of the mailbox window or to the beginning of the line in a message.

[End] Scrolls to the end of the mailbox window or to the end of the line in a message.

[Page Up]
[Page Down] Scrolls up or down through the window.
Right Mouse Button

The commands that are available from the right mouse button are generally the same as those on the main menu and toolbar; the right mouse button simply offers another access method.

To use the right mouse button commands, position the mouse pointer over a Eudora window and click the right mouse button (called a right-click), then select a command from the popup menu that appears. The contents of the popup menu vary depending on which window you are in and what tasks you might need to perform while in that window.

Right-click in an open incoming message and select View Source (if available) from the popup menu to view the formatting of the HTML text in a text file. Right-click in the message and select Send to Browser (if available) to view the HTML message in your Web browser.

If you want to turn the main toolbar or the status bar on or off in the main Eudora window, right-click on the gray area of the toolbar or status bar and select the item you want to show or hide: Toolbar or Status Bar.

If you have Eudora minimized as a button on the Windows 98/2000/ME/XP/NT 4.x Taskbar, you can check for new mail without maximizing the Taskbar button. To do so, place the mouse pointer over the Eudora Taskbar button, click the right mouse button, and select Check Mail.

Mail Storage

When you install Eudora, it creates a number of files and directories within the assigned directory. In addition, Eudora creates additional files and directories as needed for mailboxes, signatures, stationery, nicknames (Address Books), and other functions. The major Eudora files and directories are described.

EudPriv/Ads/AdCache Directory

All ad files downloaded to Eudora are kept in this directory.
Attach Directory

Incoming attachments are saved in the Attach directory until you specify another directory using the Attachment directory button in the Attachment Options (Tools:Options:Attachments). See the Receiving Attachments on page 82 for more details.

DirectoryServices Directory

Eudora uses the DirectoryServices directory to store the dll files for the Directory Services protocols that you use in the Directory Services window. See Using Directory Services on page 257 for more details on these protocols.

Embedded Directory

Eudora uses the Embedded directory to store JPEG image files that you insert into the body of outgoing messages using the Insert Picture... command under the Edit menu. Eudora deletes these files from this directory when the messages containing the images are emptied from the Trash mailbox. See Inserting Objects in Message Text (Sponsored and Paid modes only) on page 47 for more details.

Filters Directory

Filters are saved in the Filters directory. See Filtering Messages on page 161 for more details on creating and using filters.

Imap Directory

Eudora uses the Imap directory to store your IMAP mailboxes and messages.

Nickname Directory (Address Books)

Address Book entries are saved in the Nickname directory, in the default Eudora Nicknames file. If you have created additional Address Book files, they are kept under their own name in the Nickname directory. See Using the Address Book on page 233 and Using the Recipient List on page 252 for more details on creating and using Address Book files and Address Book entries (nicknames).
Plugins Directory

The EMSAPI plug-ins are kept in the Plugins directory. See the section Plug-ins (Extended Messaging Services) on page 407 for more information.

Sigs Directory

The Standard and additional signature files are kept in the Sigs directory. These files are stored with the .txt extension. See the Using a Signature on page 105 and Signature Window on page 105 for more details on creating and using signatures.

Stationery Directory

Your stationery files are kept in the Stationery directory. Stationery files are stored with the .sta extension. See Using Stationery (Sponsored and Paid modes only) on page 109 and Stationery Window on page 109 for more details on how to create and use stationery files.

descmap.pce

Mappings between mailbox names and file names are stored in the descmap.pce file.

Eudora.cnt, Eudora.hlp

The Eudora.cnt and Eudora.hlp files contain, respectively, the table of contents information and the help text for Eudora’s online help topics, accessed when you select Topics from the Help menu. These two files must be kept in the same directory.

Eudora.exe

Eudora.exe is the Eudora application executable file. You may find it convenient to keep a shortcut of this file on your Windows desktop: double-click on the shortcut icon to open Eudora.

Eudora.ini

Your Options information is saved in the Eudora.ini file, along with other information. For more information, see the “EUDORA.INI Settings File” topic in the Help Topics dialog of the online help (Contents tab), accessed by selecting Topics from the Help menu. Also see Setting Eudora Preferences on page 292.
**eudora.log, eudorlog.old**

Eudora can keep records of all mail transfers. These records are kept in the eudora.log and eudorlog.old files. The eudorlog.old file is overwritten and a new eudora.log file is created when the eudora.log file reaches its approximately 100K maximum size. To enable logging, set the LogLevel entry in the [Debug] section of the Eudora.ini file. For more information, see the [Debug] section of the “EUDORA.INI Settings File” online help, accessed by selecting Topics from the Help menu.

**filters.pce**

Names and extensions for Eudora filters are saved in the filters.pce file.

**finger.ini, LDAPInit.ini, ph.ini**

The finger.ini, LDAPInit.ini, and ph.ini files are used to store settings information for the Finger, LDAP, and Ph protocols used in the Directory Services window.

**in.mbx, out.mbx, trash.mbx**

These files hold your mail. You'll see files like these for every mailbox you create.

**NOTE:** These files are in UNIX mail format.

Mail folders that you create are stored as directories with the .fol extension. Mail folders contain mailboxes and other mail folders.

**in.toc, out.toc, trash.toc**

These files are the tables of contents for your mailboxes. They make it much faster for Eudora to access your mail. You'll see files like these for every mailbox you create.

**lmos.dat**

This file contains information about the messages on your mail server. (lmos = leave mail on server.)

**nnndbase.toc**

This file is the table of contents for your nicknames. Extra nickname files are stored in the Nickname directory (see above).
**General Reference**

**nndbase.txt**

Your nicknames are saved in the nndbase.txt file. Note that this file contains the nicknames only, while the files in the Nickname directory (see above) contain the full data for each Address Book entry—which includes the nickname and more.

**Readme.txt**

This file contains the Eudora Readme, a text file that contains important, release-current information and instructions that might not be included in the Eudora User Manual, the Eudora Quick Start Guide, or the Eudora Online Help.

***.tlx, *.clx**

Dictionary information is stored in the .tlx and .clx files.

**Plug-ins (Extended Messaging Services)**

Plug-ins are special add-ons that can be installed to add features to Eudora. For example, you could use a language conversion plug-in to translate a message to another language, a security plug-in to automatically secure a message, or a text manipulation plug-in to change lowercase to uppercase. Plug-ins interface to Eudora using the Extended Messaging Services Application Programming Interface (EMSAPI).

To make plug-ins available to Eudora, put them in the **Plugins** directory in your Eudora directory, then restart Eudora. Depending on the plug-in type, it will be available in Eudora in the following ways:

- The Message Plug-ins submenu (under the Edit menu) typically includes plug-ins that are used to modify the text of a message. These are referred to as on-request plug-ins. Some samples of these types of plug-ins are available with Eudora: Sort, UpperLower, and Unwrap.

- Icons in the message window are typically for plug-ins that are used to manipulate messages as they are sent or when they are received. These are referred to as on-transmission and on-display plug-ins.

- The Tools menu typically includes plug-ins that are used to do tasks that are not directly related to Eudora functions. These are referred to as tools plug-ins.
• The Attach submenu (under the Message menu) typically includes plug-ins that are used to create and attach particular files to a message. These are referred to as attachment plug-ins. (Example: QUALCOMM's PureVoice voice-messaging plug-in, for recording and attaching voice messages to your outgoing messages.)

• Plug-ins that are automatically used when a message is received are not available through the user interface. These are referred to as on-arrival plug-ins.

To see all of your currently installed plug-ins, select Message Plug-ins Settings... from the Special menu. The Installed Message Plug-ins dialog appears. If an installed plug-in has any settings options, you can use the Settings... button to change them. For information about available plug-ins, send e-mail to <eudora-rep@eudora.com> or visit the World Wide Web site <http://www.eudora.com>.

The Messaging Application Program Interface (MAPI)

MAPI is an interface that lets you send email messages from any MAPI-compatible application, such as your Web browser, word processor, spreadsheet, graphics application, etc.

MAPI-compatible applications have a Send or Send Mail option in the File menu. When you select the option, the Eudora MAPI server displays a new outgoing message with your current document attached. All you need to do is address the message, type any details you want to include in the body of the message, and click Send or Queue.

To run the Eudora MAPI server, set the options in the MAPI category of the Eudora Options windows. To display the MAPI Options, select Options... from the Tools menu and click on the MAPI category. See MAPI Technical Report on page 413.

You have several options in the MAPI Options dialog for loading the Eudora MAPI server. You can set it to always run or to run only when Eudora is running, or you can specify that it never run. These three options open or exit the server as soon as you select them.

NOTE: When you are running the Eudora MAPI server, Microsoft Exchange will not work. If you need to use Exchange, turn off the Eudora MAPI server.
You also have several options for saving or deleting MAPI attachments. When you use MAPI to attach a file and send a message, that file is immediately copied into the Attach directory (or a directory you have specified). You can use the MAPI options to save those copies (never delete them), or to delete them after sending their corresponding messages, or to delete them when their corresponding messages are emptied from the Trash.

Last, you have an option to send a single MAPI text file attachment (TXT and HTML files only) as an inline attachment — text in the body of the Eudora message — rather than as a “rider,” or normal attachment, to the message. So, for example, you can pass a Web page from your Web browser directly into the body of a Eudora message, for your recipients to read right in the message itself: they don't have to open an attachment.
Eudora uses Simple Mail Transfer Protocol (SMTP) to transfer your outgoing mail to your SMTP server machine, which in turn uses SMTP to send your mail to the world at large. Mail from the world at large arrives on your incoming Post Office Protocol (POP) or Internet Message Access Protocol (IMAP) mail server, where it waits for Eudora to pick it up with either POP version 3 or IMAP version 4. The mail Eudora sends and receives is constructed in accordance with RFC 822 and RFC 2045 (MIME).

**Eudora mail transport overview, POP (similar for IMAP)**

Outgoing Mail

When you send an email message to someone, Eudora uses SMTP to send the mail to your local SMTP server computer. That computer then sends the mail to your addressee’s computer, also (usually) by means of the SMTP protocol.
Why doesn’t Eudora talk directly to your addressee’s computer? For one thing, it would take a lot longer for your mail to leave your computer because your computer would have to call up each addressee’s computer and deliver your mail. For another, some computers are “hard to find”; it’s much better to let another computer “hunt” for your addressee than to make your computer do it. Finally, sometimes your addressee’s computer won’t be available when you want to send mail. The SMTP server handles this by holding your mail until the other computer is ready to accept it, eliminating the inconvenience of having unsent messages hanging around on your computer.

Incoming Mail

When somebody sends you mail, other computers use the SMTP protocol to deliver the mail to your POP or IMAP server. Your POP or IMAP server puts mail in your “mail drop,” where it stays until the Eudora program picks it up. When you check your mail, Eudora uses POP version 3 or IMAP version 4 to pick up your mail and move it to your computer.

Why doesn’t Eudora use SMTP to receive your mail? SMTP works best when the computers it knows about are always ready for mail. Unless you wanted to run Eudora 24 hours per day, seven days a week, SMTP wouldn’t work very well for you. It also doesn’t work well in lab environments, where you might use any number of different computers.

More Information

If you want to know more about SMTP, RFC 822, POP version 3, MIME, and IMAP, the official standards are:

RFC 821, “Simple Mail Transfer Protocol” by Jonathan B. Postel

RFC 822, “Standard for the Format of Internet Text Messages” by Dave Crocker

RFC 2045, “Multipurpose Internet Mail Extensions” by Ned Freed and Nathaniel Borenstein

You can find the RFCs on the web in several different places:

- http://www.rfc.net/
- http://www.faqs.org/rfcs/
- http://www.rfc-editor.org/rfcsearch.html
Where to Get More Information on MAPI

For more information, supplementary to this technical report, visit our online MAPI FAQ at the web site <http://www.eudora.com/developers>.

What Does MAPI Do?

Eudora’s MAPI support allows users to quickly attach documents to email messages directly from the application that created the document. Without MAPI, users must first save the document, remember what folder the document is in, switch to Eudora, and then remember to manually attach the document to the outgoing message.

MAPI streamlines this process dramatically. To email the current, open document from your word processor, select the Send command from your word processor’s File menu. This automatically activates Eudora and attaches a snapshot of the open document to a new composition message.

The MAPI system standardizes how messages are handled by client applications so that each client application does not have to have custom code for each target messaging application. MAPI accomplishes this by providing a standard application program interface used by all MAPI-enabled client applications.

An additional MAPI feature supported by Microsoft Office applications is the ability to add a “routing slip” to a Word, Excel, or PowerPoint document. This routing slip contains a list of email recipients obtained from the MAPI subsystem. Once a document has an embedded routing slip, then it can be semi-automatically routed as an attachment via email to all recipients listed in the routing slip. Once the routing is complete, the annotated document is returned back to the original sender.

MAPI Overview

Let’s start with a picture:
A MAPI client application is any 16-bit or 32-bit Windows application that knows how to access the standard MAPI messaging functions in a library known as a DLL (Dynamic Link Library). The functions in the MAPI DLL allow a MAPI client application to transparently and generically access a MAPI service provider. A MAPI service provider is the application that handles the receipt, transmission, and storage of messages. Examples of MAPI client applications (“front-ends”) include Microsoft Word and Microsoft Excel. Examples of MAPI service providers (“back-ends”) include Microsoft Exchange and Microsoft Fax.

All 16-bit client applications use the 16-bit MAPI.DLL and all 32-bit client applications use the 32-bit MAPI32.DLL. The MAPI and MAPI32 DLLs are “twins” which contain the same list of MAPI functions—they are parallel implementations of the 16-bit and 32-bit MAPI functions. These DLLs are provided by Microsoft as standard components of Windows 98/2000/ME/XP and Windows NT. The MAPI DLLs are normally installed in the Windows 98/2000/ME/XP SYSTEM directory (SYSTEM32 for Windows NT).
When a MAPI client application wishes to send a document, it simply loads the appropriate MAPI library (DLL) and calls the defined MAPI functions. The MAPI DLL takes care of routing the messaging and authentication requests to the appropriate MAPI service provider application, displaying the address book user interface, and returning address book and messaging data to the MAPI client application. The MAPI DLL also provides an optional user interface for user authentication. For example, the user may need to supply a user name and password to the mail system in order to “log on” to the mail system. (The Eudora implementation of MAPI does not implement authentication since Eudora itself requires authentication to access the POP3 and IMAP4 servers.)

**Eudora Implementation of MAPI**

Eudora implements a subset of the full MAPI library by providing two “replacement DLLs” for the standard Microsoft MAPI DLLs. The Eudora EUMAPI.DLL is a replacement for the 16-bit Microsoft MAPI.DLL and the Eudora EUMAPI32.DLL is a replacement for the 32-bit Microsoft MAPI32.DLL. The Eudora MAPI DLLs must be located in the same directory as the Eudora program.

The Eudora MAPI DLLs implement the standard *Simple MAPI* functions detailed in the MAPI specification. The MAPI specification also defines *Extended MAPI* functions, however, the Eudora MAPI DLLs implement only the Simple MAPI subset.

**NOTE:** The Eudora MAPI implementation requires all MAPI client applications to use only the Simple MAPI functions supported by the Eudora MAPI DLLs.

MAPI client applications which use only the basic Simple MAPI calls will generally not be able to tell the difference between the Eudora MAPI DLL functions and the Microsoft MAPI DLL functions.

It is important to understand that MAPI client applications load the MAPI DLL libraries at runtime whenever they need to access the MAPI functions. Each client application expects to find either the 16-bit MAPI.DLL file or the 32-bit MAPI32.DLL file in a common, application-independent location (generally the Windows SYSTEM directory). Therefore, it is not sufficient to copy the EUMAPI.DLL and EUMAPI32.DLL Eudora DLL files into the Windows SYSTEM directory alongside the standard Microsoft MAPI.DLL and MAPI32.DLL files. For client applications to find the Eudora MAPI DLLs, the DLL files *must* be named MAPI.DLL and MAPI32.DLL. This creates a conflict since most Windows installations will have the MAPI.DLL and MAPI32.DLL files preinstalled in the Windows SYSTEM directory to support Microsoft Exchange.
NOTE: Eudora is able to swap the Eudora EUMAPI and EUMAPI32 DLLs with the Microsoft MAPI and MAPI32 DLLs when the user launches Eudora, and is able to unswap the Eudora MAPI DLLs when the user exits Eudora.

This approach gives the user the most flexibility and preserves the user’s ability to use Microsoft Exchange and/or Microsoft Fax when Eudora is not running. If we “permanently” install the Eudora MAPI DLLs over the existing Microsoft MAPI DLLs, then applications (such as the Microsoft Fax service bundled with Microsoft Exchange) which rely on the Microsoft MAPI DLLs will no longer work. This is clearly unacceptable for users who need to use MAPI for both Microsoft Exchange and Eudora.

Eudora MAPI Startup Procedure

When launched, Eudora runs the following “swap” procedure when the user has selected either the “Always” or the “When Eudora is running” MAPI Server option in Eudora (see MAPI Technical Report on page 413 for more information;)

1. Check to see whether or not the Eudora MAPI DLLs are already installed in the Windows SYSTEM directory. If so, then you are finished.

2. Check for existing Microsoft MAPI.DLL and MAPI32.DLL files. If found, rename MAPI.DLL to MAPI.000 and rename MAPI32.DLL to MAPI32.000. (If a MAPI.000 file already exists, then Eudora uses MAPI.001, MAPI.002 etc.)

3. Copy the EUMAPI.DLL and EUMAPI32.DLL files from the Eudora program directory to the Windows SYSTEM directory as MAPI.DLL and MAPI32.DLL, respectively.

Eudora MAPI Shutdown Procedure

When shutdown, Eudora runs the following “unswap” procedure when the user selects either the “When Eudora is running” or “Never” MAPI Server option in Eudora (see MAPI Technical Report on page 413).

1. Check to see whether or not the Eudora MAPI DLLs are already installed in the Windows SYSTEM directory. If not, then you are finished.

2. Delete the Eudora MAPI.DLL and MAPI32.DLL files.
3. Rename the MAPI.000 and MAPI32.000 files, if any, to MAPI.DLL and MAPI32.DLL, respectively. (If a MAPI.001, MAPI.002, etc. file exists, then Eudora renames the one with the highest number.)

Eudora DLL Swapping Restrictions

It is important to note that there are several restrictions with the above Eudora swap and unswap procedures: The Eudora swap and unswap procedures can only run successfully if the MAPI.DLL and MAPI32.DLL are not currently “in use” by one or more MAPI client applications.

When a MAPI client application loads a MAPI or MAPI32 DLL file, Windows “locks” the DLL file while the library is loaded into memory to show that the file is “in use.” Eudora can normally detect that the MAPI.DLL and/or MAPI32.DLL files are “in use.” If Eudora detects that a MAPI or MAPI32 DLL is locked, it displays an error message and skips the swap or unswap procedure.

When Eudora is forced to skip the swap or unswap procedure, this means that the MAPI DLLs are in the wrong “state” with respect to Eudora — that is, 1) the Microsoft MAPI DLLs could be installed even after Eudora starts, or 2) the Eudora MAPI DLLs could be installed even after Eudora shuts down. To prevent this from happening, use the following procedure when using Eudora MAPI:

1. Start Windows.
2. Start Eudora.
3. Start any MAPI client applications.
4. Send attachments to Eudora via the installed Eudora MAPI interface.
5. Shutdown all MAPI client applications.
7. Exit Windows.
Once Eudora’s MAPI DLLs get into the wrong “state” with respect to Eudora, you cannot correct the state mismatch until all MAPI client applications unload the MAPI DLLs and Windows is able to unlock the DLL file. Since the MAPI DLLs are shared by multiple MAPI client applications, Windows does not unlock the MAPI DLL file until the last MAPI client application is shut down. Therefore, to force all MAPI client applications to unload the DLLs, you must shutdown all MAPI client applications.

**NOTE:** When running 16-bit MAPI client applications under Windows NT, then Eudora cannot detect the lock placed on the MAPI DLLs by Windows unless the SHARE program is running. This means that Eudora can inadvertently perform the DLL swap and/or unswap procedures while the MAPI DLL is loaded into memory. This almost always causes Windows to become unstable and can lead to crashes in MAPI client applications as well as in Windows itself.

**NOTE:** If you run 16-bit MAPI client applications under Windows NT, then you should always run the SHARE program.

The good news is that Windows 98/2000/ME/XP implements the SHARE functionality without requiring you to explicitly run the SHARE program. By default, Windows NT only implements the SHARE functionality for 32-bit applications. If you are running a 16-bit application under Windows NT, then you must run the SHARE program explicitly.
What Is MIME?

MIME stands for Multipurpose Internet Mail Extensions. MIME serves two major purposes — it allows mail applications to tell one another what sort of data is in mail, and it also provides standard ways for mail applications to encode data so that it can be sent through the Internet mail system.

MIME Encoding

The Internet uses the SMTP protocol to move mail around. SMTP is limited to the US-ASCII character set (see the “Mail Transport” section of this manual). This is a problem for people who speak languages other than American English and so need accented characters or non-American English letters, or for people who want to use special symbols like the bullet.

MIME provides a way around this restriction. It offers two encodings, “quoted-printable” and “base64.” These encodings use US-ASCII character codes to represent any sort of data you like, including special characters or even non-text data.

Quoted-printable is used for data that is mostly text, but has special characters or very long lines. Quoted-printable looks just like regular text, except when a special character is used. The special character is replaced with an “=” and two more characters that represent the character code of the special character. So, a bullet in quoted-printable looks like “=95.”

However, there are some other things that quoted-printable does. For one, since it uses an “=” to mean something special, equals signs must themselves be encoded (as “=3D”). Second, no line in quoted-printable is allowed to be more than 76 characters long. If your mail has a line longer than 76 characters, the quoted-printable encoding will break your line in two, and put an “=” at the end of the first line, to signal to the mail reader at the other end that the two lines are really supposed to be one. Finally, a few mail systems either add or remove spaces from the ends of lines. So, in quoted-printable, any space at the end of a line gets encoded (as “=20”) to protect it from such mail systems.

Let’s try an example. Here’s a passage of text that you might type on your computer
Without any encoding, this might show up on your recipient’s screen as:

+Il est dimontri, disait-il, que les choses ne peuvent btre autrement; car tout itant fait pour une fin, tout est ncessairement pour la meilleure fin.;

This corruption happens because SMTP cannot handle the special characters. However, if you and your recipient both have MIME, quoted-printable encoding would be used, and your text would show up properly:

«Il est démontré, disait-il, que les choses ne peuvent être autrement; car tout étant fait pour une fin, tout est nécessairement pour la meilleure fin.»

While your mail was actually in transit, however, it would have looked like:

=ABIl est d=E9montr=E9, disait-il, que les choses ne peuvent =EAtre =autrement; car tout =E9tant fait pour une fin, tout est n=E9cessairement = pour la meilleure fin.=BB

Base64 encoding is another way to protect binary data from the SMTP mail system. However, Base64 makes no attempt to be legible, and is most appropriate for non-text data.

**MIME Labeling**

The other important part of MIME is that it lets mailers communicate what kind of data is in a message (or part of a message). The primary mechanism used for this is the Content-Type header:

Content-Type: text/plain; charset=iso-8859-1

A content-type header is divided into three parts; the content type, the content subtype, and the parameters. In this case, the content type is “text,” meaning the message contains mostly legible text. The content subtype is “plain,” which means there aren’t any formatting commands or anything like that embedded in the text. Finally, “charset=iso-8859-1” is a parameter; in this case, it identifies the character set the message uses.
The major content types are:

- text, legible text
- image pictures and graphics
- audiosound
- video moving pictures
- message, messages, or pieces of messages
- multipart, several different kinds of data in a single message

Practical Issues

There are really only two things you sometimes need to do with Eudora and MIME. One is that it may occasionally be necessary to turn off quoted-printable encoding. Another is that you may want to know how to define mappings between computer file extensions, MIME types, and Macintosh types.

Turning Off Quoted-Printable Encoding

Eudora automatically uses quoted-printable encoding if your mail contains special characters. Eudora also uses quoted-printable encoding for attached plain text files. If your recipients don’t have MIME, quoted-printable may hurt more than it helps. If that’s the case, just turn off the QP button in the message Toolbar when you are sending text files to those recipients.

Mapping Between File Extensions, MIME Types, and Macintosh Types

Since Eudora needs to have the appropriate extensions on attachment filenames in order to open them up from the message, Eudora has the ability to map between file extensions, MIME types and subtypes, and Macintosh creators and types. Messages received by Eudora can grab the MIME type/subtype and/or Macintosh creator/type from an attachment and map that into the correct file extension. Also, on outgoing messages, Eudora can make sure that attachments are encoded with the correct MIME type/subtype and/or Macintosh creator/type depending on the file extension of the attachment being sent.
Eudora knows about some MIME types. However, since new MIME types are being defined all the time, it may be necessary to add to Eudora's knowledge from time to time. Adding new mappings between the various types only requires editing the EUDORA.INI file with a text editor (like the one that comes with Eudora).

There is a section in the EUDORA.INI file labeled [Mappings], followed by some entries, one per line. Each entry is called a map. A map defines when the mapping should occur (which can be “in,” “out,” or “both”), followed by an equals sign and five parameters. These five parameters are (in order) the computer file extension, the Macintosh creator code, the Macintosh type, the MIME type, and the MIME subtype. Here are some sample entries:

```
[Mappings]
both=gif,,,image,gif
both=mpg,,,video,mpeg
both=doc,MSWD,,,in=xls,XCEL,,,out=xls,XCEL,XLS4,,
both=eps,,EPSF,application,postscript
```

A map marked “in” only tries to match the map to messages that you receive. A map marked “out” only tries to match the map to messages that you send. A map marked “both” tries to match the map to both incoming and outgoing messages.

The first map above says that any incoming MIME message that has a part type of “image” and subtype of “gif” will get saved to a file with the extension “.gif.” It also specifies that outgoing messages that have an attachment with the file extension “.gif” will get the MIME type of “image” and subtype of “gif” if the encoding method of the message is MIME. The second map is similar to the first map in structure, but uses a different file extension and MIME type and subtype.

You can use map entries to move between computer file extensions and Macintosh creator and type as well. The third map says that if an incoming message has an attachment with the Macintosh creator “MSWD” (which is the Macintosh creator for Microsoft Word) then the file extension of the attachment when saved to disk should be “.doc” (the file extension that Word for Windows uses). Since the map is marked as “both,” it will also give attachments with the extension “.doc” on outgoing messages the Macintosh creator of “MSWD” if the encoding method of the message is BinHex.
Note that the Macintosh type from this map is empty. This allows multiple types to be recognized with just one mapping. This is nice for “in” maps because it allows you to cover a range of creator/type pairs with one map. You must be careful in using this type of map with an “out” or “both” mapping, though, because an outgoing attachment that matched this map would have a Macintosh creator, but no Macintosh type. Some Macintosh applications cannot open files with a missing type. Microsoft Word for the Macintosh can open files without a type, so this map is fine being marked “both.”

Microsoft Excel for the Macintosh is an example of a program that can’t open a file with an empty type. This is why there are two maps for Excel (the fourth and fifth maps above). The incoming map for Excel is like the one for Microsoft Word, but the outgoing map explicitly defines the Macintosh type.

The last map shows that you can have both Macintosh creator/type and MIME type/subtype in one entry. This map says that if an incoming message has an attachment that is encoded in MIME and has the “application/postscript” type/subtype, or has a BinHex attachment with the Macintosh type of “EPSF,” then the resulting file will have an “.eps” extension. Similarly, if an outgoing message has an attachment with the extension “.eps” and if the MIME encoding is being used for the message, then the attachment will get the “application/postscript” MIME type/subtype. If the message was using the BinHex encoding, then the attachment would get the Macintosh type of “EPSF.”

But what happens if an attachment matches more than one map? Eudora will try and find the best match. For example, if you had the following [Mappings] section:

```
[Mappings]
in=xls,XCEL,,
in=xlc,XCEL,XLC3,,
```

and you received a message with an attachment that had a Macintosh creator of “XCEL” and a Macintosh type of “XLC3” (a Microsoft Excel Chart), then the file would get an extension of “.xlc” since the first map only matched the Macintosh creator, but the second map matched both the Macintosh creator and type.

Eudora can receive attachments that have both a MIME type/subtype and a Macintosh creator/type. Eudora understands attachments with the MIME type/subtype “application/applefile,” which has Macintosh creator/type information embedded in it. With this type of attachment, Eudora will consider a match with the Macintosh creator/type as a “better” match than a match with the MIME type/subtype.
Finally, if an incoming attachment matches two different maps to the same degree (e.g., both maps have the same MIME type/subtype with different file extensions), then Eudora will use the file extension in the first matching map.
Anonymous FTP (ftp.eudora.com)

QUALCOMM’s Eudora Division has an anonymous FTP server, ftp.eudora.com, that has information and software related to Eudora. These are located within the eudora directory. Included are POP3, Ph, and password changing servers, the srialpop program, current product information, dialup files, and more. Also look under the directory eudora/eudorapro/windows/extras.

Eudora Information

The information in this manual was correct at the time of printing. However, things happen very quickly in the electronic world, meaning that some of this information may already be out of date. For the very latest information about Eudora, send email to eudora-info@eudora.com.

Obtaining an Internet Email Server

Post Office Protocol (POP) and Internet Message Access Protocol (IMAP) Servers are available for a variety of platforms. If you would like to run a POP or an IMAP server on your own system, we suggest the following servers:

- **Windows NT** – QUALCOMM’s Eudora WorldMail™ Server. WorldMail supports POP3 and IMAP4 as well as LDAP and Ph directory services. Microsoft Windows NT 4.x Server or Workstation is required.

- **Macintosh** – QUALCOMM’s Eudora Internet Mail Server™ (EIMS). EIMS supports POP3 as well as Ph directory services. EIMS requires a Macintosh 68030 or higher (Mac IIx, IIcx, SE/30, or better) or a PowerPC®.

- **UNIX** – QUALCOMM’s QPopper. QPopper 3.0 is available via anonymous ftp from ftp.eudora.com. QPopper versions are available for a number of UNIX systems.

- **VAX/VMS** – VAX/VMS systems may try either the Multinet package from TGV, or IUPOP3, available via anonymous FTP from ftp.indiana.edu.
Sources

For information on QUALCOMM’s family of Internet Email Servers, send e-mail to <eudora-rep@eudora.com> or visit the World Wide Web site <http://www.eudora.com>.

Ph Server Source Code

A server for the Ph protocol is available via anonymous FTP from ftp.eudora.com.

Password Change Server

Three sample UNIX servers for Eudora’s Change Password... command (on the Special menu) are available via anonymous FTP from ftp.eudora.com.

Windows Sockets Products

Demos of Windows Sockets 1.1 compliant stacks and applications are available via anonymous ftp from papa.indstate.edu in the directory winsock-1.

For those with World Wide Web (WWW) browsers, try the following sites. Click the URL to display website.

The Consummate Winsock Applications list: http://cws.internet.com/
The Ultimate Collection of Winsock Software: http://www.tucows.com/
Stardust Technologies: http://www.stardust.com/wsdir/
WinSite: http://www.winsite.com

Kerberos

You can get the necessary files and information for setting up Kerberos authentication in Eudora from ftp.eudora.com in the directory eudora/eudorapro/windows/extras/kerberos. Be sure to read the installation instructions to ensure that Kerberos is set up properly.

To learn more about the Kerberos authentication system, click on the following URL to display website. http://web.mit.edu/kerberos/www
Spelling Dictionaries

There are additional spelling dictionaries that are compatible with Eudora's built-in spelling checker. They are available via anonymous ftp from ftp.eudora.com in the directory eudora/eudorapro/windows/extras/dictionaries. To configure Eudora to use these dictionaries, look at the online help (select Topics from the Help menu) under EUDORA.INI File, [Settings] MainLexfiles.

Developer Information

If you are a software developer and are interested in how to have your application used or integrated with Eudora, click on the following URL:
http://www.eudora.com/developers
Dialup Eudora

As of version 4.0, Eudora no longer supports the built-in Serial Dialup (shell) connection method found in previous versions of Eudora. Eudora now requires that you use the Microsoft SLIP/PPP Dialup Networking connection method that is a standard feature of both Windows 98/2000/ME/XP and Windows NT 4.x.

The Microsoft SLIP/PPP Dialup Networking facility offers the following advantages over the retired Eudora Serial Dialup feature:

- TCP/IP running on top of SLIP/PPP is inherently more reliable than a Serial Dialup connection because reliable, end-to-end data transmission is an integral feature of TCP/IP.
- A SLIP/PPP dialup connection is application-independent and supports TCP/IP, IPX, and NetBEUI protocols. Eudora Serial Dialup was not generic and applied specifically to checking and sending mail with Eudora.
- A SLIP/PPP connection supports transmission of binary data, as required by the IMAP4 protocol.
- Microsoft Dialup Networking supports a wider range of modem hardware, and navigation scripts are generally modem-independent.

As with the old Serial Dialup function, Eudora can use Microsoft Dialup Networking to automatically dial your mail server, check and/or send mail, and then automatically hang up the connection.

General Steps

Following are the general steps necessary to set up Microsoft Windows to use Microsoft Dialup Networking. If you have already set up Microsoft Dialup Networking and can successfully connect to your Internet Service Provider, then skip to the section “Configuring Eudora to Auto-Dial the Phonebook Entry” following:

- **Make sure you have a SLIP/PPP account** – You must arrange for SLIP/PPP account access through your Internet Service Provider. If you can choose between SLIP and PPP, we recommend PPP.
• **Install your modem** – Configure Microsoft Windows so that it recognizes your modem hardware.

• **Install networking components** – Configure your MS Windows networking software to include the TCP/IP protocol.

• **Install Dialup Networking components** – Configure your MS Windows networking software to include the Microsoft Dialup Networking tool and the Remote Access Services.

• **Define a Phonebook entry** – The Microsoft Dialup Networking tool lets you create multiple “phonebook” entries, one for each of your Internet Service Providers. Configure the Phonebook entry to automatically dial the modem, establish a SLIP/PPP session, and, if applicable, auto-configure your IP address and DNS server address(es).

• **Configure Eudora to auto-dial** – Eudora can use a Dialup Networking Phonebook Entry to automatically dial your mail server, check and/or send mail, and hang up the connection when the mail transfer is complete.

---

**Configuring Dialup Networking under Windows 98/2000/ME/XP**

Dialup Networking is an optional component of Windows 98/2000/ME/XP. Before configuring Dialup Networking, you should install your modem and make sure the Windows 98/2000/ME/XP networking software includes support for the TCP/IP protocol. Consult your Microsoft documentation for details on installing your modem, configuring the TCP/IP protocol, and installing the Dialup Networking tools.

**After you install Dialup Networking, follow these steps to define a new Phonebook entry:**

1. Double-click on the My Computer icon to open an Explorer window. Then double-click on the Dialup Networking icon to open the Dialup Networking folder.

2. Double-click on the Make New Connection button to display the Make New Connection Wizard.

3. Enter the name you want to associate with your Internet Service Provider. Also, select your modem in the drop-down list. Then click Next.

4. In the edit box, enter the phone number for your Internet Service Provider. Then click Next.
5. Click **Finish** on the last page of the New Connection Wizard to complete the creation of the Phonebook entry.

6. In the Dialup Networking folder, right-click on the icon for the Phonebook entry you have just created, and select the **Properties** command.

7. While testing your new Phonebook entry, configure Dialup Networking to display a terminal window after your modem has connected to the remote computer. To do this, click the **Configure…** button to display the modem configuration properties. Select the **Options** tab, then check the **Bring up terminal window after dialing** option. Click **OK** to accept the change.

8. Back in the **Properties** dialog for your Phonebook entry, click the **Server Type…** button to display the **Server Types** dialog. In the **Type of Dial-Up Server** drop-down list, select either **SLIP** or **PPP** as appropriate. Also, uncheck the **NetBEUI** and **IPX** network protocols, but make sure that the **TCP/IP** protocol is checked. Finally, uncheck the **Log on to network** and **Enable software compression** options.

9. In the **Server Types** dialog, click the **TCP/IP Settings…** button to display the **TCP/IP Settings** dialog.

10. If your Internet Service Provider has assigned you a specific (static) IP address, select the **Specify an IP address** option, then enter that address in the field. Otherwise, if your provider assigns IP addresses dynamically via Dynamic Host Configuration Protocol (DHCP), then keep the default **Server assigned IP address** setting.

11. If your Internet Service Provider supports DHCP, then the name server addresses will automatically be configured by DHCP, and you should keep the default **Server assigned name server addresses** setting. Otherwise, select the **Specify name server addresses** option, then enter the server addresses assigned by your Internet Service Provider. Click **OK** to accept the **TCP/IP Settings** changes.

12. Back in the **Server Types** dialog, click **OK** to accept the changes.

13. Back in the **Phonebook Entry Properties** dialog, click **OK** to accept the changes.

14. You should now be back in your **Dialup Networking** folder. Double-click on your new Phonebook entry to dial your Internet Service Provider. Your modem should immediately dial the phone number defined in your Phonebook entry, and Windows 98/2000/ME/XP should prompt you for your username and password.
15. Once your modem negotiates the connection with the remote system, you typically then have to "log in" to that remote system by entering the username and password assigned to you by your Internet Service Provider. Some systems require that you first press **Enter** to display a login prompt, then enter the username and password. In any event, once you are “logged on” (authenticated), some providers automatically start your SLIP or PPP session, while others require that you take an extra step, such as typing **ppp**, to initiate a PPP session. Carefully note the exact steps you must take in order to manually log in and establish a SLIP/PPP session: you will need this information in order to automate the login process, as described in “Defining a Login Script.”

**Configuring Dialup Networking using Windows NT 4.x**

Dialup Networking is an optional component of Windows NT 4.x. Before configuring Dialup Networking, you should make sure Windows NT recognizes your modem and also make sure your Windows NT networking software includes support for the TCP/IP protocol. Consult your Microsoft documentation for details on installing your modem, configuring the TCP/IP protocol, and installing the Dialup Networking tools. To properly configure TCP/IP, you may need some information from your Internet Service Provider regarding your IP address and your DNS server(s).

*After you install Dialup Networking, follow these steps to define a new Phonebook entry:*

1. Double-click on the **My Computer** icon to open an Explorer window. Then double-click on the **Dialup Networking** icon to launch the Dialup Networking tool.

2. Click the **New...** button to display the New Phonebook Entry Wizard.

3. Enter the name you want to associate with your Internet Service Provider, then click **Next** to display the Server page.

4. Most Internet Service Providers use a terminal server or a Unix server to support dialup users. Therefore, you should generally check all three boxes to indicate that (1) you are calling the Internet, (2) it is okay to send your plain text password, and (3) the server expects login information. Ask your email administrator or your Internet Service Provider if you are unsure about these settings.

5. Click **Next** to display the Modem or Adapter page.

6. Select your modem from the list, then click **Next** to display the Phone Number page.
7. In the edit box, enter the primary phone number for your Internet Service Provider. If your provider has alternate phone numbers, click the Alternates… button and enter the alternate phone numbers. Click Next to display the Serial Line Protocol page.

8. Select PPP or SLIP as appropriate to your Internet Service Provider (most providers now support PPP), then click Next to display the Login Script page.

9. When initially testing dialup connections to your Internet Service Provider, we recommend that you select the Display a terminal window option. Once you can manually establish a dialup connection, you can then automate the dialup connection with a login script (see “Defining a Login Script” later for details). Click Next to display the IP Address page.

10. If your ISP has assigned you a specific (static) IP address, then enter that address in the field. Otherwise, if your provider assigns IP addresses dynamically via DHCP, then keep the default Server assigned IP address setting. Click Next to display the Name Server Addresses page.

11. If your ISP supports DHCP, then the name server addresses will automatically be configured by DHCP and you should leave the default addresses of 0.0.0.0. Otherwise, enter the server addresses assigned by your Internet Service Provider. Click Next to display the final page of the Phonebook Wizard.

12. Click Finish to create your new Phonebook entry.

13. Back in the Dialup Networking tool, select your new Phonebook entry in the drop-down list, then click Dial to dial your Internet Service Provider. Your modem should immediately dial the phone number defined in your Phonebook entry.

14. Once your modem negotiates the connection with the remote system, you typically then have to “log in” to that remote system by entering the username and password assigned to you by your Internet Service Provider. Some systems require that you first press Enter to display a login prompt, then enter the username and password. In any event, once you are “logged on” (authenticated), some providers automatically start your SLIP or PPP session, while others require that you take an extra step, such as typing ppp, to initiate a PPP session. Carefully note the exact steps you must take in order to manually log in and establish a SLIP/PPP session: you will need this information in order to automate the login process, as described in “Defining a Login Script.”
Defining a Login Script

Here is a sample login script for an Annex terminal server:

```plaintext
proc main
    transmit "^M"
    waitfor "Annex username:" until 30
    if FALSE == $SUCCESS then
go to Failure
    endif
    transmit $USERID + "^M"
    waitfor "Annex password:" until 30
    if FALSE == $SUCCESS then
go to Failure
    endif
    transmit $PASSWORD + "^M"
    waitfor "Permission granted" until 30
    if FALSE == $SUCCESS then
go to Failure
    endif
    transmit "ppp" + "^M"

Failure:
    set screen keyboard on
    halt

Done:
endproc
```

Based on your experience with manually connecting to your Internet Service Provider, you may need to change the Annex username: and Annex password: strings to match the prompts displayed by the machine to which you are connecting. You may or may not need to transmit the ppp command after the system accepts your username and password. The Dialup Networking tool automatically replaces the $USERID and $PASSWORD variables with your Dialup Networking username and password so that you don’t expose your username and password in an unencrypted plain text file.

To use this login script, you must first save the file to a known location on your disk. By convention, Dialup Networking script files have an SCP file extension.

To use the script under Windows 98/2000/ME/XP:

- Launch the Dial-up Scripting Tool found on the Start:Programs:Accessories menu.
Dialup Eudora

- Select the Phonebook entry from the Connections list box and enter the script filename in the File name field.
- Click the Apply button to accept your changes.
- Click the Properties button to display the properties dialog for your Phonebook entry.
- Click the Configure button to display the modem properties dialog. Then select the Options tab.
- Uncheck the Bring up terminal window after dialing option. Now click OK to accept your changes.
- Back in the properties dialog for your Phonebook entry, click OK to accept your changes.
- To use the script under Windows NT 4.x:
  - Open the Dialup Networking tool, and from the dropdown list select the Phonebook entry you want to change.
  - Click the More button, then select the Edit entry and modem properties... item from the button menu.
  - In the Edit Phonebook Entry dialog, select the Script tab, click the Run this script option, and then enter the name of your saved login script.

This script is compatible with both Windows 98/2000/ME/XP and Windows NT 4.x Dialup Networking tools. If the login sequence fails, then the script will halt, leaving you free to attempt a manual login via the popup Dialup Networking terminal window.

Creating a Desktop Phonebook Shortcut

You may find it convenient to create a desktop shortcut to your Phonebook entry, something we recommend.

To create a Phonebook shortcut under Windows 98/2000/ME/XP:

1. Open the Dialup Networking folder, then drag a Phonebook icon to your Windows desktop.
2. To rename the shortcut label, select the shortcut icon and press F2, or just click on the shortcut label twice, slowly.
To create a Phonebook shortcut under Windows NT 4.x

1. Open the Dialup Networking tool, click the More button, and select the Create shortcut to entry... item.

2. Choose a name for the shortcut in the Save dialog, then save the shortcut to your Desktop folder.

To test the Dialup Networking connection, double-click on the shortcut icon on your Desktop. Once your Phonebook entry successfully and automatically creates a TCP/IP connection to your Internet Service Provider, you are ready to configure Eudora to automatically dial the Phonebook entry.

Configuring Eudora to Auto-Dial the Phonebook Entry

If you connect to your Internet Service Provider with a modem, you can easily configure Eudora to automatically “dial on demand” using Microsoft Dialup Networking. Eudora only needs a connection to your provider when performing network operations such as checking or sending mail, or when performing a directory services lookup. When Eudora is configured to auto-dial, it automatically hangs up the connection when the network operation is complete.

Before you can configure Eudora to auto-dial, you must create and configure a Microsoft Dialup Networking Phonebook entry to automatically connect to your Internet Service Provider (see the procedures above).

To auto-dial a Dialup Networking Phonebook entry, start Eudora, select Options... from the Tools menu to display the Options dialog, then click on the Advanced Network category. Check the Automatically dial & hangup this connection option. In the Entry list, select the Phonebook entry you want to dial. In the Username edit box, enter the username, if any, that is required to log in to your Internet Service Provider (this is the value that is substituted for the $USERID variable in your Dialup Networking script). Check the Save password option if you want Eudora to save your Dialup Networking password in the Eudora.ini file. If you leave the Save password option turned off, then Eudora will prompt you to enter your password each time it auto-dials the Phonebook entry.

To test the auto-dial capability, make sure your modem is not already connected, then select the Check Mail command from the File menu in Eudora. Eudora will automatically dial your Internet Service Provider, log in, establish a TCP/IP connection, transfer any new mail, and automatically hang up when the mail transfer is complete.
X1 Search Queries

X1 Search Queries

When performing searches using the Ultra Fast indexed search feature (Paid mode only), you can perform complex queries using the functionality of X1. This section describes how to create such advanced queries to get the most out of your Eudora.

Columns

A column is a grouping of data within the indexed database. Advanced users can utilize the “matches X1 query” verb in the Search window to perform complex searches.

Available columns with Eudora search are: attachment, attachmentcount, bcc, body, cc, date, from, headers, id, imapflags, junk, label, mailboxname, mailboxpath, priority, size, status, subject, to, and who.

Basic Search Rules

Let's begin with a simple scenario. In the Find Messages window, we select “Anywhere” for the Search category, and “matches x1 query” for the verb. The table below lists various text the user enters in the search text box and the results of such a search.

<table>
<thead>
<tr>
<th>‘Anywhere’ ‘matches x1 query’</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>the</td>
<td>a word starting with &quot;the&quot; in any column.</td>
</tr>
<tr>
<td>the=</td>
<td>the exact word &quot;the&quot; in any column.</td>
</tr>
<tr>
<td>-the</td>
<td>no occurrences of any word starting with &quot;the&quot; in any column.</td>
</tr>
<tr>
<td>NOT the</td>
<td>(Same as <code>-the</code>. &quot;NOT&quot; must be all caps.)</td>
</tr>
<tr>
<td>-the=</td>
<td>no occurrences of the exact word &quot;the&quot; in any column.</td>
</tr>
<tr>
<td>NOT the=</td>
<td>(Same as <code>-the=</code>.)</td>
</tr>
<tr>
<td>a AND b</td>
<td>a word starting with &quot;a&quot; and a word starting with &quot;b&quot; in the same column. (&quot;AND&quot; must be all caps.)</td>
</tr>
<tr>
<td>a b</td>
<td>(Same as <code>a AND b</code>. AND is the default operator.)</td>
</tr>
</tbody>
</table>
X1 Search Queries

**‘Anywhere’ ‘matches x1 query’ Result**

<table>
<thead>
<tr>
<th>Query</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>a &amp; b</td>
<td>(Same as <code>a AND b</code>.)</td>
</tr>
<tr>
<td>a OR b</td>
<td>a word starting with &quot;a&quot; or a word starting with &quot;b&quot; in any column. (&quot;OR&quot; must be all caps.)</td>
</tr>
<tr>
<td>a (\lor) b</td>
<td>(Same as <code>a OR b</code>.)</td>
</tr>
<tr>
<td>subject:the</td>
<td>a word starting with &quot;the&quot; in the &quot;subject&quot; column. (More on &quot;column specifiers&quot; below.)</td>
</tr>
<tr>
<td>((a \lor b) &amp; c)</td>
<td>(Performs <code>a \lor b</code> first, then AND's with <code>c</code>.)</td>
</tr>
<tr>
<td>a (\lor) (b &amp; c)</td>
<td>(Performs <code>b \&amp; c</code> first, then OR's with <code>a</code>.)</td>
</tr>
<tr>
<td>a (\lor) b &amp; c</td>
<td>(Same as <code>a \lor (b \&amp; c)</code>. AND's have higher precedence than OR's so they are performed first even though they come later in the expression. See precedence rules below.)</td>
</tr>
</tbody>
</table>
| "the big d" | the prefix phrase “the big d”. It will match “the big dog” and “the big date”.
| "the big d"= | the exact phrase “the big d”. It will not match "the big dog" or "the big date", only "the big d" where "d" is a complete word.
| "the big d " | (Same as `"the big d"=`. Any non-alpha-numeric characters in a phrase search mean "exact word"). |
| a@b.com | (Same as the phrase search `"a b com"`. All punctuation is stripped, then prefix phrase search. See punctuation rules below.) |
| a NEAR b | (Same as `a AND b`, but "a" and "b" must be "near" each other, a max of 10 words in between.) |
| b NEAR a | (Same as `a NEAR b`.) |
| a NEAR/5 b | (Same as `a NEAR b`, with a max of 5 words in between "a" and "b"). |
| a \(\slash\)20 b | (Same as `a NEAR/20 b`.) |
| a PRE b | (Same as `a AND b`, but "a" must preceed "b".) |
| a PRE/5 b | (Same as `a PRE b`, with a max of 5 words inbetween "a" and "b". See more “proximity” search examples below.) |

You can also search on a specific column by selecting that column in the search category drop down list. For the next example, we will select “Subject” in the search category.

<table>
<thead>
<tr>
<th>‘Subject’ ‘matches x1 query’</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>(anything from above)</td>
<td>(Same as above but for the ‘Subject’ column only.)</td>
</tr>
<tr>
<td>-</td>
<td>something (items with non-empty ‘Subject’ columns).</td>
</tr>
<tr>
<td>=</td>
<td>nothing (items with empty ‘Subject’ columns).</td>
</tr>
<tr>
<td>-=</td>
<td>(Same as ‘-’. See Special Searches below.)</td>
</tr>
<tr>
<td>NOT</td>
<td>anything (all items; no effect. You might think it would be the same as ‘-’, but ‘-’ is special that way. “NOT” requires something after it.)</td>
</tr>
<tr>
<td>from:the</td>
<td>(Normal punctuation rules apply. It will not search the “From” column for “the” since you’re already in a ‘Subject’ column search.)</td>
</tr>
</tbody>
</table>

**Special Searches**

‘-’, ‘=’ and ‘-=’ have special meaning when they are for a column search (either by entering them in a column search box or with a main search box column specifier like ‘subject:=”’). Once you start typing more characters immediately after them, they lose their speciality and follow other rules. i.e. ‘-the’ is ‘NOT the’. ‘=10’ would follow normal punctuation rules (discussed below) and turn into just ‘10’. ‘-=10’ would turn into ‘NOT =10’ which is ‘NOT 10’. NOTE: When searching using these special searches, you might notice extra results when searching for ‘-’ or ‘-=’. You might see some "empty" results that you thought you were filtering out. The problem is that those values contain spaces or other invisible characters so they look empty, but they are not and therefore belong in the "non-empty" search that ‘-’ and ‘-=’ give.

**Parenthesis () and []**

If parenthesis are not "balanced", we try to recover in the best possible way:

Not enough closing parens? We add them internally at the end of the search expression to balance them. So ‘(a b c’ is equivalent to ‘(a(b|c))’.
Not enough opening parens? We treat the extra closing parens as normal punctuation. So `a b l c)d` is equivalent to `a b l c d`. In this case you might think it should be `a b l "c d"` since we've noted before that punctuation between terms (like `a@b.com`) turns it into a phrase search. The exception to that rule is extra parenthesis. Parenthesis are only used to group terms and then thrown away. Or in this case, just thrown away. However, they do serve a purpose to separate "c" from "d", just like space. NOTE: ( = [, and ) = ]. In other words, you can mismatch your parenthesis. i.e. `(a [b l c])` is equivalent to `(a (b l c))` and is therefore balanced.

**Order Of Operations (Precedence Rules)**

1. Parenthesis are done first,
2. then proximity (NEAR, PRE, NEAR/n, PRE/n, /n),
3. then negation (-, NOT),
4. then intersection (&, AND),
5. then union (l, OR).

Example: `NOT a OR b AND c NEAR d` is equivalent to `-a l (b & (c NEAR d))`.

**Numbers**

A search for `1,234,567.89` is equivalent to `1,234,567.89 OR 1234567.89`. In other words, the commas in a number are optional so we search for both.

**Negative Numbers**

A search for `-123` is equivalent to `NOT 123 OR `-123``. In other words, the negative sign could mean logical negation or as actually the prefix of a number less than zero, so we search for both.

**Multiple Negative Searches**

`NOT NOT a` is equivalent to `a`. Same with `NOT -a` and `--a`. But `-NOT a` is equivalent to `-"NOT" & a`.

439
Spacing

In general, extra spaces are ignored except when found within double quotes. Some operators need to be surrounded by spaces for them to be interpreted in their special way. But when the next character is an open paren, no extra space is required. i.e. `a &(b l c)`, `NOT(this l that)`, etc. Same for quotes. i.e. `this AND"that and the other"` Normal words work too. i.e. `this(that)` is identical to `this AND that`.

Maximum Word Length

There is a maximum size for any word we'll index and this will affect searches. The maximum length of any string of characters we index is 39. So if you search for a word longer than that, you will get no results even if you are sure the word exists in a document somewhere. Since most words have far fewer characters, this is not a problem. And usually longer "words" have punctuation in them, and if any of those words between the punctuation are less than 40 characters, they will be indexed and searchable. For example, you might search for a URL: `http://www.thisdomainislongbutlessthan40characters.com/some/path/file.html` It has no spaces and could be typed as one term by the user to search for in the main search box. It is longer than 39 characters as a whole so the entire "word" is not indexed itself (even if we did index punctuation) but many of the subpieces are, so if you were to type this "word" to search for, it also is broken up internally using normal punctuation rules and the search would work. When the results are highlighted, you will see it highlight the sub pieces and not the whole thing. This is discussed more below.

Master Search Field Rules

"columnName:" notation allows column-specific searches to be represented in the main search box. Double-quotes can be used to prevent this parsing of colon items (examples below), and also denote phrase searches. Parenthesis control boolean combination, and can control the range of a "columnName:" specifier as shown below.

For example, the search:

```
From:lee
```

The colon notation with no space after the colon, indicates this is a column specifier. It's the same as typing "lee" into the From column's search area. But this notation allows other combinations like:

```
To:lee OR cc:lee
```
Note in the above that two different columns are combined. Any space terminates the special column-specific handling. So the following finds the word "box" in any column (including content), but the word "gift" only in the subject column:

Subject: gift box

One exception: a space is allowed when starting out with a NOT:

Subject: NOT spam

(this is the same as `Subject:-spam`, or `-Subject:spam`)

To make a multi-word search within a column, one can use either quotes or parens or brackets:

```plaintext
Subject: (gift box)
Subject: [gift box]
Subject: "gift box"
```

The last quoted version acts a little differently since it specifies a phrase search, meaning the two words must be adjacent and in that order. The paren/bracket versions just mean AND, namely that the two words must occur in the column, in any order and position.

Special case, consider this search expression:

```plaintext
Subject:
```

Since there is nothing after the column specifier, it is not treated as a column specific search at all. Rather, it is a search using normal punctuation rules. In this example, the search is for the actual text "Subject:" in any column (following our punctuation rules, see below).

The name of the column may be abbreviated in various ways. Column name specifiers:

are case insensitive;

may not contain spaces, so to specify for a column whose name has a space (like Attachment Count), the user must leave out the space and write for instance AttachmentCount?;

may be abbreviated as any prefix of the name, so `Subject:` would work for Subject?, as would `su:`. In case of ambiguity as to which column is meant, the column specifier chooses the first one in alphabetical order. So `s:` would mean `Size:` rather than `Status:` or `Subject:`.
If no column name is matched, the expression is searched using normal punctuation rules. i.e. `subject:x1` is equivalent to `"subject x1"`.

**More Punctuation Rules**

All punctuation is treated as spaces. In a search, however, they signal a phrase search without having to use double quotes. i.e. `re-search` is equivalent to the search `"re search"`.

Initial punctuation is converted into spaces, except for strings of minus signs. So `!@#$abc` turns into `abc` and we ignore strings of spaces so that is equivalent to just `abc`. `--a`, however, is a double negative `a` search.

Phrase searches are by default "prefix" phrase searches. So `"a b c"` will find `"a b cat"`, but `"a b c"=` will ONLY find `"a b c"` where "c" is not a prefix.

</tbody>
</table>
Proximity Searching

/3 is equivalent to NEAR/3

`a NEAR b` = `a NEAR/10 b` and matches "a [ten words] b", 10 is the default for NEAR and PRE with no /n argument after it.

`a / b` = `a b`. i.e. a lone / sign not the same as `a NEAR b`

`a NEAR/ b` = `a NEAR b`, the straggler / sign will be ignored.

`a /3 b` = `b /3 a`. i.e., it's a commutative operator, order doesn't matter.

`a PRE/3 b` is similar to `a NEAR/3 b`, but "a" must preceed "b" to match.

`a= NEAR/0 b=` can be written using phrase search syntax: `"a b"= OR "b a"=`

`a= PRE/0 b` = `"a b"`, not commutative, "a" exact match, "b" prefix match.

`a= PRE/0 b` is not the same as `"a b"` since it will match "alpha beta" and "a butterfly" while the phrase search will only match the latter ("a" exact).

`x/4` is not a NEAR operation, it's equivalent to `"x 4"`

`/3/6` is not a NEAR operation, it's equivalent to `"3 6"`

`"a NEAR b"` is not a NEAR operation, it's a phrase search with 3 terms: "a", "near", and "b".

Some stranger examples:

Example 1: `a AND b NEAR c`

NEAR has higher precedence than AND, this is equivalent to: `a AND (b NEAR c)`
Example 2: `a NEAR b NEAR c`

This is a single strung-together NEAR operation. So all of the following will match:

"a ..... b ..... c"
"a ...c. b ......."  
"c ..... b ..... a"
"c ...a. b ......."  
"....... b .a..c.."  
"a..b.[more than 10 words].b..c"

In other words, "a is near b but so is c", order doesn't matter. The search expression could also be written as `(a NEAR b) AND (b NEAR c)`.

Example 3: `(a NEAR b) NEAR c`

That 2nd NEAR is meaningless so the 2nd NEAR is taken literally: `(a NEAR b) AND "NEAR" AND c`

Example 4: `a NEAR "b c"

The word "a" is near the phrase "b c". "a b" NEAR "c d" is also an valid proximity search.

Example 5: `a NEAR NOT b`

Makes no sense, treated as: `(a NEAR "NOT") AND b` since NEAR and PRE have higher precedence than OR, AND, and NOT.

Example 6: `a NEAR (NOT b)`

Makes no sense, treated as: `a AND "NEAR" AND NOT b` since parenthesis have highest precedence.
EUDORA.INI Settings File

The EUDORA.INI file is where Eudora keeps most of the settings. It is a standard Windows INI file, and may be edited with any text editor.

**NOTE:** Since Windows caches information from INI files in memory while the program is running, you should never change the EUDORA.INI file while Eudora is in use. If you need to make a change, first quit Eudora, then edit the file, and then restart Eudora.

The EUDORA.INI file is divided into a number of sections, the following of which appears by default:

- [Settings]
- [Mappings]
- [Window Position]
- [Tool Bar]
- [DirectoryServices]
- [Debug]

Optional Sections

The following sections will appear in the INI file only when the appropriate conditions are met or the appropriate items created:

[Personalities] This section appears only when you have created alternate email accounts (personalities).

[Stationery] This section appears only when you have created stationery files.

[Open Windows] This section appears only when there are windows currently open in Eudora.
[WazooBars] This section appears only when normal Eudora windows are currently open or minimized on the desktop (and thus buttons appear on the Eudora taskbar, which is what this section controls).

[Recent File List] This section appears only when files have been opened since the most recent Eudora startup.

**NOTE:** We strongly urge that you do not change the values in these optional sections of the INI file, and rather make any changes from the interface. For example, personalities can be created and edited from the Personalities window, and stationery can be created and edited from the Stationery window. Both windows are available from the Tools menu.

The values of the settings in each of these optional sections reflect the current values of the objects or conditions; there are no "default" values per se.

**Name and Location of the INI File**

The default name is EUDORA.INI and the default location is in the mail directory. But the name and location can be changed.

To specify a different INI file from the EUDORA.INI that is not in the mail directory, add a second parameter to the command line in the Program Item for Eudora, for example:

Command Line: `c:\apps\eudora.exe c:\mymail c:\inis\myeudora.ini`

To use a different INI file that is in the mail directory:

Command Line: `c:\apps\eudora.exe c:\mymail myeudora.ini`
Command Line: `c:\apps\eudora.exe c:\mymail\myeudora.ini`

This is a way to have multiple settings for one set of mailboxes, nicknames, etc. For example, you may have multiple email accounts in which you receive mail, but want to collect mail from all of the accounts in one place. You could set up separate Program Items for each account (each having a different INI file on the command line), and switching between accounts would be as simple as double-clicking on a Program Item.

And for an even more tricky specification, if the first parameter is an INI filename without a path, then the mail directory is searched through the normal process of checking the EUDORA environment variable and then using the executable directory.
Examples:

SET EUDORA=c:\mymail
Command Line: c:\apps\eudora.exe myeudora.ini

will use c:\mymail as the mail directory and c:\mymail\myeudora.ini as the INI file.

SET EUDORA=myeudora.ini
Command Line: c:\apps\eudora.exe

will use c:\apps as the mail directory and c:\apps\myeudora.ini as the INI file.

Default INI file

When an entry in the EUDORA.INI file is not found, Eudora will look in the DEUDORA.INI file located in the same directory as the EUDORA.EXE file. The [Mappings] section of the DEUDORA.INI file acts as though it was appended to the end of the [Mappings] section of the EUDORA.INI file.

Examples:

    SET EUDORA=c:\mymail
    Command Line: c:\apps\eudora.exe myeudora.ini
    will use c:\mymail as the mail directory and c:\mymail\myeudora.ini as the INI file.

    SET EUDORA=myeudora.ini
    Command Line: c:\apps\eudora.exe
    will use c:\apps as the mail directory and c:\apps\myeudora.ini as the INI file.

<td>Whether or not the default signature should be included when redirecting a message.</td>
</tr>
<tr>
<td>IncludeSigReply</td>
<td>1</td>
<td>Whether or not the default signature should be included when replying to a message.</td>
</tr>
<tr>
<td>InteractiveSpellCheck</td>
<td>1</td>
<td>When doing a spell check, controls whether you get prompted with a dialog for each misspelled word, or each misspelled word gets marked with a double red underline (which then you can right-click on to get suggestions and other options for the misspelled word). If you hold down the Shift key while doing a spell check, the other method of spell checking will be performed.</td>
</tr>
<tr>
<td>InterpretFormatFlowed</td>
<td>1</td>
<td>Turns format=flowed off and on.</td>
</tr>
<tr>
<td>JunkMailboxName</td>
<td>Junk</td>
<td>Specifies name for Junk mailbox. If this is 1 the Junk mailbox will never be marked as having unread mail in it.</td>
</tr>
<tr>
<td>JunkNeverUnread</td>
<td>0</td>
<td>If this is 1 the Junk mailbox will never be marked as having unread mail in it.</td>
</tr>
<tr>
<td>JunkTrimMbox</td>
<td>Trash</td>
<td>Specifies which mailbox to trim old junk to. Changing this setting to &quot;-&quot; will cause old Junk to be deleted rather than being trimmed to a mailbox.</td>
</tr>
<tr>
<td>KerberosSetName</td>
<td>0</td>
<td>Uses KClient SetUserName() function to set user name in Kerberos system. Turning this switch on may cause Kerberos tickets to be invalidated.</td>
</tr>
<tr>
<td>Krb4Dllname</td>
<td>kerberos32.dll</td>
<td>The name of the Kerberos version 4 DLL, e.g., kerberos32.dll.</td>
</tr>
<tr>
<td>LastSettingsCategory</td>
<td>0</td>
<td>Last category that was displayed in the Options dialog.</td>
</tr>
<tr>
<td>LexPath</td>
<td>0</td>
<td>Directory in which the dictionary files for spell checking reside.</td>
</tr>
<tr>
<td>MainLexFiles</td>
<td>0</td>
<td>Main dictionary files. British dictionaries can be used by changing this to british.tlx,british.clx.</td>
</tr>
<tr>
<td>MainWindowState</td>
<td>1</td>
<td>The state of the Main Window (normal = 1, minimized = 2, or maximized = 3). The state is set when Eudora closes, and the Main Window is set to this state the next time Eudora starts up.</td>
</tr>
<tr>
<td>ManualJunkScore</td>
<td>100</td>
<td>The score assigned to mail the user specifies as junk. A setting of 0 means do not change the score when the user specifies mail as junk.</td>
</tr>
<tr>
<td>ManualNotJunkScore</td>
<td>0</td>
<td>The score assigned to mail the user specifies as not junk.</td>
</tr>
<tr>
<td>Entry</td>
<td>Default Value</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>---------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>MapiAutoSendSignature</td>
<td>0</td>
<td>Controls whether messages sent through Eudora's MAPI will tack on the default signature.</td>
</tr>
<tr>
<td>MapiExcerptFixedText</td>
<td>1</td>
<td>Controls whether messages sent through Eudora's MAPI will convert plain text quoting into excerpts so that messages are easier to read on different width screens (e.g. PCs vs. PDAs).</td>
</tr>
<tr>
<td>MaxConcurrentDialupTasks</td>
<td>2</td>
<td>The maximum number of checking/sending tasks that can occur simultaneously while using a Eudora specified dialup connection.</td>
</tr>
<tr>
<td>MaxConcurrentTasks</td>
<td>10</td>
<td>The maximum number of background tasks that can be running at the same time. Note that if you are connected over a modem (dialup networking connection) only one network task at a time will be run, otherwise network performance would suffer greatly.</td>
</tr>
<tr>
<td>MaxMenus</td>
<td>30000</td>
<td>The maximum number of popup menus for mailboxes. These are equivalent to mailbox folders; that is, local mailbox folders that contain other mailboxes, or IMAP mailboxes that contain other mailboxes. Used when Eudora can't be started due to the large number of popup menus created, which is limited by Windows. This will allow you to start up Eudora and run it long enough to remove some mailboxes so that fewer menus will be needed. Running for extended periods of time with this switch in Eudora.ini is not recommended.</td>
</tr>
<tr>
<td>MDNSendAddress</td>
<td>0</td>
<td>Controls whether your return address should be used in the MAIL FROM command for return receipts. RFC 2298 says that it should be empty in order to prevent mail loops, but some SMTP servers reject that due to bad spam-prevention heuristics.</td>
</tr>
<tr>
<td>MinAgeOffScore</td>
<td>0</td>
<td>The minimum score old junk must have before it will be trimmed.</td>
</tr>
<tr>
<td>MinScoreToJunk</td>
<td>50</td>
<td>The minimum score needed for mail to be considered junk.</td>
</tr>
<tr>
<td>MoodWatchCheckOrigin0</td>
<td></td>
<td>Controls whether the original sender's (excerpted) text in the message should be used when calculating the MoodWatch score of a composition message.</td>
</tr>
<tr>
<td>MoodWatchCompBadWords</td>
<td></td>
<td>Controls whether or not phrases identified by the MoodWatch engine in composition messages should be highlighted by underlining.</td>
</tr>
<tr>
<td>MoodWatchDelayinMinutes</td>
<td></td>
<td>Time of the delay (in minutes) if MoodWatch is configured to delay the sending of messages.</td>
</tr>
<tr>
<td>Entry</td>
<td>Default Value</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>MoodWatchDeltaTime</td>
<td>5</td>
<td>MoodWatchDeltaTime is how long Eudora must be idle, in seconds, before background MoodWatch scanning starts.</td>
</tr>
<tr>
<td>MoodWatchInterval</td>
<td>1000</td>
<td>Number of milliseconds that Eudora will wait until checking the MoodWatch score after the user hits a key in a composition message.</td>
</tr>
<tr>
<td>MoodWatchThresholdTime</td>
<td>1000</td>
<td>MoodWatchThresholdTime is how long it keeps scanning, in milliseconds, once scanning starts.</td>
</tr>
<tr>
<td>MultipleRepliesForMultiSelection</td>
<td>0</td>
<td>If 1 Eudora will generate separate reply messages for each selected message. Otherwise Eudora will concentrate all messages into a single reply.</td>
</tr>
<tr>
<td>NetscapeURLDDE</td>
<td>1</td>
<td>If this setting is on, when clicking on a URL in a message and Netscape Navigator is running, then Eudora will send the URL to that open Navigator window. If this setting is off (i.e. set to zero), then clicking on a URL in a message will send the URL to the system, which will invoke the default browser. Some Navigator users may want to turn this setting off if they like the behavior of opening a new window (as opposed to reusing an existing browser window) when clicking on a URL in Eudora.</td>
</tr>
<tr>
<td>NetworkOpenTimeout</td>
<td>60</td>
<td>The number of seconds Eudora will wait for a response to opening a connection before it gives up.</td>
</tr>
<tr>
<td>NewMailUpdateFrequency</td>
<td>25</td>
<td>Number of initial messages that have to be spooled before message processing begins.</td>
</tr>
<tr>
<td>NoAutoResponseHeaders</td>
<td>errors-to:,list-</td>
<td>Allows for better detecting of mailing list to which you should not auto-respond. As a default, “errors-to:,list-” is the value. Add any other headers that will identify it as a list (hence will not auto-respond via filters).</td>
</tr>
<tr>
<td>NoAutoSendPrecedence</td>
<td>list,bulk</td>
<td>When filtering incoming messages with precedence headers of list or bulk, do not automatically create new outgoing messages.</td>
</tr>
<tr>
<td>NonJunkToAddressBook</td>
<td>1</td>
<td>If this is 1 and a message is the user specifies a message as not junk the sender of that message will be added to the address book.</td>

<tr>
<td>NonJunkAddressBook</td>
<td></td>
<td>Address book to add senders of not junked messages to. If blank Eudora Nicknames will be used.</td>
</tr>
<tr>
<td>NoSplashScreen</td>
<td>0</td>
<td>If on, the opening splash screen will not be displayed.</td>
</tr>
</tbody>
</table>
### Eudora.ini File

<table>
<thead>
<tr>
<th>Entry</th>
<th>Default Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Offline</td>
<td>0</td>
<td>Set to 1 to temporarily set Eudora offline; it will not perform automatic timed mail checks when offline.</td>
</tr>
<tr>
<td>OfflineLinkAction</td>
<td>0</td>
<td>Eudora displays the Offline Link Dialog if you click on an http: link while offline (not connected to the Internet). That dialog lets you choose what action should be taken regarding that link the next time Eudora is online: ask you if you want to launch the link, launch it without asking, bookmark the link in your browser, or remind you later. The dialog now has a checkbox that will make the action you choose the default from then on, which means you won't see the Offline Link Dialog any more. It defaults to 0 = ask, and the other values are 1 = launch, 2 = bookmark, and 3 = remind.</td>
</tr>
<tr>
<td>OldWABImport</td>
<td>0</td>
<td>Controls whether Eudora uses an older method of importing the Windows Address Book, which may do a better job of importing on some setups than the default method.</td>
</tr>
<tr>
<td>OpenRetryCount</td>
<td>5</td>
<td>Some external applications like to open up files that Eudora is using (e.g. virus checkers and backup software), so this setting controls how many times Eudora should try to open a file before it gives up.</td>
</tr>
<tr>
<td>OpenRetryInterval</td>
<td>250</td>
<td>Time (in milliseconds) Eudora waits before attempting to open a file again (see OpenRetryCount above).</td>
</tr>
<tr>
<td>OptionsHideCursor</td>
<td>1</td>
<td>Controls whether the cursor gets hidden to prevent flicker when switching between categories in the Tools-&gt;Options dialog, which causes a small minority of systems to lose the cursor while in the dialog.</td>
</tr>
<tr>
<td>OwnerLok</td>
<td>1</td>
<td>If this is non-zero, an OWNER.LOK file will be created on startup which helps to prevent possible corruption if multiple instances of Eudora are used on the same set of mailboxes.</td>
</tr>
<tr>
<td>PasswordChangeServer</td>
<td></td>
<td>The name of the server to use for changing passwords. By default this is the same as your POP server.</td>

<td></td>
<td>Where your dialup password is saved (in an encrypted format) if you have the Save Password switch turned on.</td>
</tr>
<tr>
<td>SavePasswordText</td>
<td></td>
<td>Where your POP password is saved (in an encrypted format) if you have the Save Password switch turned on.</td>
</tr>
<tr>
<td>SaveStatisticsInterval</td>
<td>15</td>
<td>The Statistics data is saved to disk at intervals of this many minutes.</td>
</tr>
<tr>
<td>SearchAllmapAccounts</td>
<td>0</td>
<td>Controls whether all of your mailboxes in all IMAP accounts will be looked at when searching, or just the mailboxes in the IMAP account that you start the search in (applies to local mailboxes as well, i.e. a search starting in a local mailbox will only search your local mailboxes if this setting is off).</td>
</tr>
<tr>
<td>SeenIntro</td>
<td>1</td>
<td>You can make the introduction window return by changing the value to 0.</td>
</tr>
<tr>
<td>SendCharset</td>
<td></td>
<td>Specifies which charset to indicate for outgoing messages. If left blank Eudora will choose an appropriate charset (e.g., &quot;USASCII&quot;).</td>
</tr>
<tr>
<td>SendXAttachHeader</td>
<td>0</td>
<td>Controls whether or not the X-Attachment: header should be sent out with outgoing messages that contains attachments.</td>
</tr>
<tr>
<td>Entry</td>
<td>Default Value</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------</td>
<td>---------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>SeparateMSHTMLSettings</td>
<td>0</td>
<td>Controls whether Eudora keeps its settings for the MS Viewer in a different part of the registry so that they don’t conflict with IE (or any other app that uses MSHTLML), which can be handy for having the default font size be different in Eudora than in IE.</td>
</tr>
<tr>
<td>ShowAttachmentIcons</td>
<td>1</td>
<td>Controls whether or not icons representing attachments should be shown in the body of the message.</td>
</tr>
<tr>
<td>ShowMeTheErrors</td>
<td>0</td>
<td>Controls whether or not to show the error dialog immediately on send/receive errors. By default, errors are listed in the Task Errors window, and that window is brought to the foreground.</td>
</tr>
<tr>
<td>ShowProgress</td>
<td>1</td>
<td>Show/hide the Progress window.</td>
</tr>
<tr>
<td>ShowProgressInactive</td>
<td>0</td>
<td>If Eudora is not the foreground application, this controls whether the Progress window should be shown or not.</td>
</tr>
<tr>
<td>ShowSelectedSummaryCount</td>
<td>0</td>
<td>Adds an extra number to the beginning of the numbers listed in the compact button in the lower-left corner of the mailbox summary display that shows how many message summaries are currently selected in that mailbox.</td>
</tr>
<tr>
<td>ShowTipOfTheDay</td>
<td>0</td>
<td>Determines whether to display the Tip of the Day when Eudora is launched.</td>
</tr>
<tr>
<td>SMTPAuthAllowed</td>
<td>0</td>
<td>Allows you to add authentication to your SMTP server.</td>
</tr>
<tr>
<td>SMTPAuthBanished</td>
<td>CRAM-MD5</td>
<td>It should contain a comma-separated list of authentication schemes whose use is to be disallowed. The security conscious should set it to &quot;LOGIN,PLAIN&quot;, as this ensures that your SMTP server password will always be strongly encrypted when it goes over the network. Users of IPSWITCH's Imail SMTP server should set it to &quot;CRAM-MD5&quot; so as to avoid a bug of theirs.</td>
</tr>
<tr>
<td>SmtpAuthK5INI</td>
<td>1</td>
<td>If this is 1 SMTP will use Kerberos 5 authentication if that personality's POP/IMAP is set to use Kerberos 5.</td>
</tr>
<tr>
<td>SMTPAuthRequired</td>
<td>0</td>
<td>Allows you to require authentication when gaining access to your SMTP server.</td>
</tr>
<tr>
<td>SMTPPort</td>
<td>25</td>
<td>Default port number for the SMTP service (smtp).</td>
</tr>
<tr>
<td>SMTPRecipientWrap</td>
<td>72</td>
<td>Column at which recipient headers (To: and Cc:) are wrapped when sending a message.</td>

<td>UsePOPCAPA</td>
<td>1</td>
<td>Whether or not Eudora should send the CAPA command to the POP server. Used only to see if the server supports the MANGLE command modifier. See UsePOPMangle.</td>
</tr>
<tr>
<td>UsePOPMangle</td>
<td>0</td>
<td>Whether or not Eudora should use the MANGLE modifier to the TOP command in a POP connection. MANGLE can produce some better results for messages that are large, giving a summary for the attachments in the message.</td>
</tr>
<tr>
<td>UsePOPSend</td>
<td>0</td>
<td>If UsePOPSend is on, Eudora will send mail using the POP3 extended command XTND XMIT. Since this is an optional command for POP3, many POP3 servers do not support this command (Berkeley’s popper, however, does). There are pros and cons to using POP3 to send your mail. It provides a level of security since it requires a username/password pair to send mail messages, unlike SMTP. It is faster than SMTP, especially when checking for new mail at the same time. It doesn't check for valid recipients until the entire message is sent, and some implementations (Berkeley's popper, for example) won't tell you which recipients are invalid and will send the message to the valid recipients anyway.</td>
</tr>
<tr>
<td>UseQuickTime</td>
<td>1</td>
<td>If off, Eudora will never attempt to use QuickTime to display images. Useful for situations where QuickTime is causing instability in the system.</td>
</tr>
<tr>
<td>UseJunkMailbox</td>
<td>0</td>
<td>If this is 1, junk mail will automatically be placed in the Junk mailbox.</td>
</tr>
<tr>
<td>UserChangeLex</td>
<td>uchange.tlx</td>
<td>Filename of user-defined list of words to change when spell checking.</td>
</tr>
<tr>
<td>UseRelay</td>
<td>1</td>
<td>If this is 1, sending messages for all personalities will use the SMTP settings for the relay personality.</td>
</tr>
<tr>
<td>UserIgnoreLex</td>
<td>uignore.tlx</td>
<td>Filename of user-defined list of words to ignore when spell checking.</td>

</tr>
<tr>
<td>WrapMenus</td>
<td>1</td>
<td>If this is set to 0, menus that are too long for the screen will not wrap, and you may not be able to see all the menu items. On Windows 98/2000/Me, the operating system supports scrolling menus, which you might find more attractive.</td>
</tr>
</tbody>
</table>

Mappings

This is a sample [Mappings] section. It is not a default for Eudora if you have a missing or empty [Mappings] section. The [Mappings] section contains information for mapping between computer file extensions, Macintosh creator and type, and MIME type and subtype for attachment files (in that order). Entries marked "in" work on only incoming messages, and entries marked "out" work on only outgoing messages. Entries marked "both" work on both incoming and outgoing messages.

For a more detailed explanation, see MIME Labeling on page 420.

```plaintext
out=txt,ttxt,TEXT,text,plain

Tool Bar

This section reflects the current settings of the main Eudora toolbar. If you create additional Eudora toolbars, then additional [Tool Bar] sections will appear in the INI file.

We strongly recommend that you do not change any of the settings in the [Tool Bar] section(s) of the INI file, and that you instead make any changes to any Eudora toolbar from the toolbar customization dialog (Customize dialog). This dialog is accessed by right-clicking anywhere on the toolbar and selecting Customize... from the drop-down menu. For more information, see Eudora Toolbar on page 212.

The [DirectoryServices] section controls the use of the Directory Services window (accessed from Eudora’s Tools menu) and its associated databases. For more information on Directory Services, see its dedicated section in the Eudora User Manual.
**NOTES:** Of the entries listed below, only those marked with an asterisk (*) are user-settable.

<table>
<thead>
<tr>
<th>Entry</th>
<th>Default Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OldKeepOnTopPCCoverted</td>
<td></td>
<td>What in pre-4.0 versions of Eudora used to be [Settings] AddressKeepForeground is now KeepOnTop in this section. KeepOnTop saves the check state of the &quot;Keep On Top&quot; check button in the Directory Services window. Eudora uses this entry (OldKeepOnToPConverted) to determine if the AddressKeepForeground entry from a pre-4.0 version of Eudora has been mapped to the current version. When Eudora 4.x is run for the first time, it sets the KeepOnTop entry (described below) equal to the value of AddressKeepForeground. In addition, it also sets this entry equal to 1 so that the next time Eudora is run, it reads the check state from KeepOnTop rather than from AddressKeepForeground.</td>
</tr>
<tr>
<td>PanesY*</td>
<td></td>
<td>This entry reflects the height of the Directory Services window when Eudora was last shut down.</td>

Debug

The [Debug] section controls aspects of the Eudora log file. The Eudora log file is a handy tool for debugging network connections, especially when using the dialup connection method.

<table>
<thead>

Bit 7 (64): All bytes received  
Bit 8 (128): Corrupt mailbox TOC file messages  
Bit 9 (256): Basic EMSAPI translator messages  
Bit 10 (512): Advanced EMSAPI translator messages |
Troubleshooting

What to Do First

Occasionally, you may encounter a problem or bug when using Eudora. This section includes information to help you solve those problems. You can also check the Eudora Technical Support Web Pages, click the following URL:
http://eudora.qualcomm.com/techsupport/

If you are having problems, try the following:

- Be sure that you have the current release of Eudora.

- Be sure that your incoming mail account (POP or IMAP) is set correctly. This mail account may be different from your e-mail address, so double-check to see that you have entered the proper information in the Return address, Mail Server (Incoming), and Login Name fields of the Getting Started options (Tools>Options>Getting Started). Incoming mail accounts are usually of the following format:
  loginname@mailservername

- Be sure your SMTP server is set correctly in the SMTP server field of the Sending Mail options (Tools>Options>Sending Mail). This server may or may not be the same computer as your POP server. See Sending Mail on page 302.

- Be sure you are entering your password correctly, paying attention to uppercase and lowercase letters (make sure the [Caps Lock] key is off).

- Be sure the date is correct on your computer, especially the year.

- Be sure Eudora can find your winsock.dll. If Eudora cannot find it, be sure the Path line in your AUTOEXEC.BAT file includes the directory that contains the winsock.dll. Or, if you do not want to edit your AUTOEXEC.BAT file, try copying your winsock.dll into your Eudora directory.

- Run ScanDisk to check for problems on the hard drive.
If you’re having trouble with your mailboxes (especially with repeated requests to rebuild a mailbox’s table of contents), quit Eudora and find the mailbox’s .toc file in the Eudora directory. Change the .toc extension to .000, then open Eudora and see if the problem persists.

On Windows 98/XP: If you’re having other problems, especially crashes, remove all of the items in your Startup directory (C:\Windows\Start Menu\Programs\StartUp), then restart Windows while holding down the F8 key. In the Startup menu, select Safe Mode. Then open Eudora and see if the problem persists.

Errors

The following are possible errors and alerts you could receive from Eudora, and suggestions for fixing them.

“-ERR Maildrop lock busy”

This usually happens after your PC has “hung” during a mail check and you are now attempting to re-connect to the mail server. The best thing to do is to contact your e-mail administrator and report that you have a POP3 server process that needs to be disconnected.

“503 Need RCPT (Recipient)”

You must include at least one recipient in the To: field of your outgoing message in order for the message to be delivered. If you have a nickname in the To: field, be sure that in the Address Book at least one e-mail address or valid nickname is included in the Address(es) tab. If the Address(es) tab is blank, there are no recipients and this causes the error.

“Error getting a network socket. Cause: no buffer space available (10055)”

The buffers the error message is referring to are TCP buffers. TCP/IP stacks need buffers in which they can store data that goes to/from the network. Since at a low level the data has to be sent to a hardware device, the buffers generally have to be in low memory (i.e., < 1MB). This is valuable space for most users, so most TCP/IP stacks have a way of controlling how many of these buffers the user wants allocated. If you’re using a lot of other network applications at the same time (especially the X Window System, which uses a buffer for each window), then you might get this error. The other time this error might occur is when the TCP/IP stack is not correctly marking buffers as being unused, so you have a buffer not being used that the stack thinks is being used.
“Could not rename lmos.tmp to lmos.dat”

Quit Eudora, and go to your Eudora directory. Find the files called lmos.tmp and lmos.dat and delete them both (lmos.tmp may not be there: that's not a problem). On your next mail check you may get some mail that you have already received, but that should only happen once.

“This recipient is not acceptable to your SMTP server” or “Relay Denied”

This error messages displays if you have multiple personalities and have any relay restrictions to stop spam messages turned on.

Any relay restricitons come from your ISP. Contact your ISP and ask them to turn the relay restrictions off.

Formatting and Printing

The following are possible formatting and printing problems, and suggestions for fixing them.

You received a message containing columns and the columns are not lining up correctly.

Your message font is probably a proportional font. Change your display font in the Fonts Options (Tools>Options>Fonts): set the “Fixed-width” option to a non-proportional font (such as Courier New or Courier), and uncheck the “Use proportional font by default” option.

You have a message that is printing with strange line breaks.

When most e-mail programs send out messages, they insert hard returns at around 75 to 80 characters. (If they didn’t, some e-mail applications would be able to display only the first 80 characters or so of a very long line of text.) What's happening with your message is that the width of the line that fits on the printed page is shorter than 75 to 80 characters, so the hard returns end up in the wrong place.

The solution is to make the print font smaller, or choose a print font in which the letters are printed closer together—like Helvetica instead of Courier New, for example. To do this, change the Font and Size options in the Printer section of the Fonts options (Tools>Options>Fonts). See Fonts on page 313.
Miscellaneous

The Password checks for sending mail, not just for checking mail.

SMTP servers, which are used to send mail for most e-mail accounts, do not require a password for access the way a POP server does. However, if the POP daemon your server is using is descended from the UC Berkeley POPper, you can use the POPSend protocol, which routes SMTP calls through the POP server, so that the POP server will require the password.

If you turn this feature on in your POP server, add this line to the [Settings] section of the Eudora.ini file:

```ini
UsePOPSend=1
```

This means you will have to enter your password to send as well as check mail. However, this is not terribly secure, because users who know what they are doing can simply remove that .ini file line or uncheck the “Use XTND XMIT” option and disable the feature. It protects you against inexperienced but unscrupulous users.
Address Book. The Address Book is where you keep information about individuals or groups that you correspond with.

Alias. Another name for an existing user’s address. In Eudora, an alias is also called a nickname.

Application Configuration Access Protocol (ACAP). ACAP is a protocol which allows applications to store and retrieve arbitrary configuration data from a central server.

Attachments. Any file can be attached to and sent with a Eudora message. Most of the time, an attached document functions like a “rider” to the email message, and does not appear within the message text. Instead, the name of the document is displayed automatically in the Attached field in the message header.

Authenticated Post Office Protocol (APOP). APOP is an MD5-based login command that does not send passwords in clear text over the network.

Automation. You can control and exchange information with Eudora from other programs that support the Windows Automation Interface, such as Microsoft Visual Basic. These options give you external access to Eudora mail folders, mailboxes, and messages, and to the Eudora application itself.

BinHex. This is an attachment decoding method best used for recipients on a Macintosh with an email reader that is not MIME-compliant.

Blind Carbon Copy (Bcc). In this header field, you enter email addresses or nicknames of people to whom a blind copy of the message is to be sent. These recipients are not displayed in the message header, and the recipients in the To or Cc fields will not know that a copy went to these addresses.

Body. The part of an email message that contains the main text of the message. The body can contain text, graphics, sound, and video clips.
**Glossary**

**BossWatch.** Eudora’s feature to help you catch yourself before you send a message to someone you’ll wish you hadn’t.

**Browser.** A World Wide Web client that is able to send and receive messages using HTTP and read and format HTML documents.

**Challenge-Response Authentication Mechanism-Message Digest 5 (CRAM-MD5).** The CRAM-MD5 algorithm is an encryption strategy for exchanging passwords between the Internet mail server and a client. Using CRAM-MD5, passwords are not sent in clear text.

**Client.** A computer or software program that accesses resources over the Internet. It is also an application that requests a server to perform a function. In the Internet mail environment, the term client indicates a mail user agent, for example, Eudora.

**Content Concentrator.** Eudora’s feature to streamline messages by hiding the quoted parts of replies, and concatenating multiple messages in a thread.

**Context menu.** The context menu appears when you press the right button on your mouse. Context menus usually contain options that allow you to do tasks without going to the menu bar.

**Daemon.** Daemons are generally server programs. They run continuously and are available when clients wish to initiate a session. However, an SMTP daemon periodically acts as a client when it needs to forward messages that are not to be delivered locally.

**Dialup Networking.** This is a specified dialup connection (referred to in Windows NT 4.0 as a “phonebook entry”) used when Eudora does any network operation. This option is available only if you have installed the dial-up networking services with Windows 98/XP or Windows NT 4.0.

**Distribution list.** A group of recipients to whom users can refer by a common name (for example, a distribution list called Marketing). When users address a message to a distribution list, all members of the distribution list receive the message.

**Domain.** In general, a group of computers and other devices under the management of a single administrator or administrative entity. In Windows NT, a domain is a group of servers that share common security policy and user account databases. In the Internet, a domain identifies a range of IP addresses and mail-forwarding information. See DNS.
Domain Name System (DNS). The naming service used by Internet Mail to support message routing. It maps domain addresses to IP addresses so Internet messages can be delivered to a particular server.

Emoticon. Characters used to indicate an emotion or expression. In internet communication, emoticons such as smiley faces can add an extra level of context to email messages.

Eudora Sharing Protocol (ESP). Using this protocol, you can create and maintain groups whose members share files in a shared folder without using a server.

File Transfer Protocol (FTP). Using this protocol, you can transfer files over the Internet.

Filters. A filter in Eudora sorts your mail as it is being delivered. You set up filter parameters for your specific needs, for example, all messages from your father can be filtered to your mailbox named DAD.

Finger. This is a directory services protocol. The Finger protocol is a server that allows you to search for a person’s information, such as email address, phone number, etc.

Folder. This is a file you create in Eudora where you can add mailboxes. You can name folders, for example FAMILY and your mailboxes can be named DAD, MOM, SIS, etc.

Folder Carbon Copy (Fcc). You use Fcc to place a copy of your message in a mailbox or folder you designate.

Forward. This a Eudora function where you can forward an incoming message and its attachments to another person.

Gateway. In general, software that translates information between one protocol and another.

Header. The part of an email message that precedes the message. It contains information such as the originator, recipient, and subject of the message. Also, it is used as an individual header filed, such as the To header.

Home page. An HTML document that resides in a data directory and is the primary starting point for anyone navigating that directory.
**Hypertext Markup Language (HTML).** HTML is used to create Web pages. A Web client interprets HTML and displays documents and graphics accordingly. HTML also allows document authors to establish hypertext links between documents in various locations on the Internet and to create forms and image maps that enable users to interact with Web documents. Eudora uses HTML to send and receive styled text.

**Hypertext Transfer Protocol (HTTP).** HTTP is the standard way of transferring information across the World Wide Web. It supports a variety of media and file formats across a variety of platforms.

**Internet.** A giant, global network made up of many smaller networks all connected using the TCP/IP protocol. The Internet is the network of networks which spans the globe. TCP/IP is generally the network and transport protocol stack used to connect networks, but protocol translating gateways enable non-TCP/IP networks to connect to the Internet as well.

**Internet directory.** A directory that runs over TCP/IP and is widely implemented on the Internet. A directory implementing Ph, LDAP, and Finger is an Internet directory.

**Internet Engineering Task Force (IETF).** IETF is the standards-setting body of the Internet.

**Internet Message Access Protocol (IMAP).** IMAP allows Eudora to access and manipulate electronic mail messages on a server, and it permits manipulation of remote mailboxes so they function like local mailboxes. IMAP4 provides a richer and more complex set of functionality than the POP3 protocol. IMAP is also called an Incoming server.

**Internet Service Provider (ISP).** An ISP is the organization or company that provides you with Internet access and email availability. For example, America Online (AOL) is an ISP.

**IP address.** The address that serves as a unique identifier of computers on the Internet. It is a sequence of four small integers (each less than 256). When written, the numbers are separated by periods, for example: 210.170.2.45. The DNS converts IP addresses to the more familiar domain names.

**Java.** This is a programming language that allows software developers to write programs to run on any computer platform, regardless of the operating system.

**Kerberos.** This is one of many authentication systems Eudora uses. If your network uses Kerberos for authentication, the appropriate options are provided by your email administrator.
**Glossary**

**Lightweight Directory Access Protocol (LDAP).** LDAP is a protocol that provides an online, fully indexed, fast access white-pages directory service developed and freely distributed by the Regents of the University of Michigan. LDAP is included in Eudora’s Directory Services.

**Mailbox.** A location that stores messages for a single user.

**Mailing List.** This is usually a special interest group you can join on the Internet to receive and send information. Once you belong to a mailing list, you can receive messages anyone sends to this list. If you send email to the mailing list, every member of the list receives your message.

**Message Application Program Interface (MAPI).** Eudora’s MAPI support allows you to quickly attach documents to email messages directly from the application where you created the document. Without MAPI, you would have to save the document, remember what folder the document is in, switch to Eudora, and then remember to manually attach the document to the outgoing message.

**Message store.** A collection of mailboxes.

**Multi-Purpose Internet Mail Extensions (MIME).** The is an attachment decoding method best used for recipients with MIME-compliant email readers, regardless of what operating system they are using. MIME is a set of extensions to the Internet Mail standards that supports the inclusion of multi-part and multimedia files, such as sound and video, in email messages.

**Network.** A group of connected computers that can communicate with one another. Networks enable computers to share files and resources and exchange messages.

**Nickname.** In Eudora, a nickname is entered instead of an email address. For example, in the Address Book where nicknames are set up, you can enter the nickname TERRY for terry@aol.com. When you write a message, you can enter TERRY in the To field instead of Terry’s entire email address. Nicknames are also called aliases.

**Personality.** This is an alternate email account. In Eudora, you can access mail from several email accounts at the same time. However, you must set up each account separately using Eudora’s personality functions.

**Ph.** Ph (Phone book) is a protocol providing an online, fully indexed, fast access white-pages directory service developed and freely distributed by the Computer and Communications Services Office at the University of Illinois at Urbana.
**POP3.** The Post Office Protocol 3 is a protocol that provides a simple, standardized way for users to access mailboxes and download messages to their computers. POP3 is also called the Incoming server.

**Postmaster.** A special type of user responsible for maintaining the mail delivery system for a particular group of computers. A postmaster is responsible for following up on queries from users and other postmasters. Internet standards require that the postmaster account be valid at every domain.

**RAS.** Windows NT Remote Access Service. This Windows 98/XP and NT service, when configured correctly, allows your computer to connect to your ISP via a modem. You set this up in Dial-Up Networking.

**Redirect.** This means that incoming messages can be sent to a new recipient “by way of” you, maintaining the original sender’s address in the From field.

**Request for Comments (RFC).** In the Internet community, RFCs are a numbered sequence of documents generally describing protocols for Internet communication. An Internet standard protocol is also given a STD number in addition to an RFC number. Only RFCs with a STD number are standards of the IETF. Some RFCs are historical or experimental and are not standards. Others have not yet reached standard status. Still others provide documentation about the Internet itself.

**RPA.** This is one of many authentication systems Eudora uses. Use RPA if CompuServe is your ISP.

**ScamWatch.** Eudora’s feature to identify phishing scams and alert you to suspicious URLs in messages.

**Server.** An entity that provides a network service. A server can be hardware (such as a file server), software (such as a mail server), or services (such as a transportation service). A mail server is a program that accepts, relays, and delivers mail.

**Shared folder.** This is a folder that allows multiple users to receive mail in the same directory. Because all members of a shared folder can access messages in the shared folder, it is not necessary to duplicate the same message for multiple users. Only IMAP clients such as Eudora can access shared folders. ESP (Eudora Sharing Protocol) users can also share folders.
**Signature.** A signature is a few lines of text automatically added to the end of an outgoing message when it is sent. A signature can be whatever you want, but it is mostly used to give contact information (telephone, address, etc.). You only use one signature at a time in a message.

**Simple Mail Transfer Protocol (SMTP).** SMTP is a protocol widely implemented on the Internet for exchanging email messages. SMTP is also called an Outgoing server.

**Secure Multipurpose Internet Mail Extensions (S/MIME).** A specification for secure email messages allowing authentication (digital signatures) and privacy (encryption).

**SMTP AUTH.** SMTP AUTH authenticates messages that are sent. This operates automatically in Eudora. The preferred SMTP authentication method is CRAM-MD5. If CRAM-MD5 is not available, LOGIN or PLAIN will automatically be used.

**SPAMWatch.** Eudora’s SPAM filtering plugins. Junk mail is automatically identified and transferred to a Junk mailbox.

**Stationery.** Stationery files are templates you create for outgoing messages, for example, a generic response when you are on vacation.

**Table of Contents (TOC).** The TOC in Eudora is the list of messages and their data displayed in each mailbox or folder.

**Transmission Control Protocol/Internet Protocol (TCP/IP).** TCP/IP is a set of protocols for computer network communication. The protocols provide conventions for connecting networks and routing traffic between them. It supports local area networks as well as interconnections between local area networks. TCP/IP protocols are described in IETF RFCs and in numerous reference works.

**Universal Resource Locator (URL).** URLs are Internet addresses and links to pages and sites that reside on the World Wide Web. For example, to display the Eudora Web page on the Internet, you need the Eudora URL, which is www.eudora.com.

**UNIX to UNIX Copy Protocol (UUCP).** UUCP is a UNIX email protocol.

**Uuencode.** This is an attachment decoding method best used for recipients using PC or UNIX systems that are not MIME-compliant.
**Username.** A character string by which users are known, for example *dclifford*. Username is also called Login name.

**Winsock.** Winsock is a connection method. There are two methods of making Winsock calls using TCP/IP stacks: blocking and asynchronous.

**World Wide Web.** Also known as the Web, the World Wide Web is a graphical interface to Internet resources. Web refers to the set of hypermedia pages accessible via the Internet.
